DICHIARAZIONE DI CONFORMITÀ CE

Noi, firmatari della presente, dichiariamo sotto la nostra esclusiva responsabilità, che il prodotto:

VENTILCONVENTTORE

serie FCW

al quale questa dichiarazione si riferisce è conforme alle seguenti norme armonizzate:

- CEI EN 60335-2-40
- CEI EN 55014-1
- CEI EN 55014-2
- CEI EN 61000-6-1
- CEI EN 61000-6-2

soddisfano così i requisiti essenziali delle seguenti direttive:

- Direttiva LVD 2006/95/CE
- Direttiva compatibilità elettromagnetica 2004/108/CE
- Direttiva Macchine 98/37/CE

CERTIFICAT DE CONFORMITÉ CE

Nous soussignés déclarons sous notre exclusive responsabilité que le produit :

VENTILO-CONVECTEURS

série FCW

auquel cette déclaration fait référence, est conforme aux normes harmonisées suivantes :

- EN 60335-2-40
- EN 55014-1
- EN 55014-2
- EN 61000-6-1
- EN 61000-6-2

satisfaisant ainsi aux conditions essentielles des directives suivantes:

- Directive LVD 2006/95/CE
- Directive compatibilité électromagnétique 2004/108/CE
- Directive Machines 98/37/CE

DECLARACIÓN DE CONFORMIDAD CE

Los que suscriben la presente declaran bajo la propia y exclusiva responsabilidad que el conjunto en objeto, definido como sigue:

FAN COIL

serie FCW

al que esta declaración se refiere, está en conformidad a las siguientes normas armonizadas:

- EN 60335-2-40
- EN 55014-1
- EN 55014-2
- EN 61000-6-1
- EN 61000-6-2

al que esta declaración se refiere, está en conformidad a las siguientes normas armonizadas:

- Directiva LVD 2006/95/CE
- Directiva compatibilidad electromagnética 2004/108/CE
- Directiva máquinas 98/37/CE

Bevilacqua, 01/10/2007

CE CONFORMITY DECLARATION

We the undersigned declare, under our own exclusive responsibility, that the product:

FAN COIL

FCW series

to which this declaration refers, complies with the following standardised regulations:

- EN 60335-2-40
- EN 55014-1
- EN 55014-2
- EN 61000-6-1
- EN 61000-6-2

thus meeting the essential requisites of the following directives:

- Directive LVD 2006/95/CE
- EMC Electromagnetic Compatibility Directive 2004/108/CE
- Machine Directive 98/37/CE

CE KONFORMITÄTSERKLÄRUNG

Wir, die hier Unterzeichnenden, erklären auf unsere ausschließlich Verantwortung, dass das Produkt:

GEBLÄSEKONVEKTOR

der Serie FCW

auf das sich diese Erklärung bezieht, den folgenden harmonisierten Normen entspricht:

- EN 60335-2-40
- EN 55014-1
- EN 55014-2
- EN 61000-6-1
- EN 61000-6-2

womit die grundlegenden Anforderungen folgender Richtlinien erfüllt werden:

- Richtlinie LVD 2006/95/CE
- Richtlinie zur elektromagnetischen Verträglichkeit 2004/108/CE
- Maschinenrichtlinie 98/37/CE

REMARKS

Store the manuals in a dry location to avoid deterioration, as they must be kept for at least 10 years for any future reference.

Carefully and thoroughly read all the information referred to in this manual. Pay particular attention to the usage regulations accompanied by the words "DANGER" or "WARNING" because, if they are not complied with, damage can be caused to the machine and/or injury to persons or damage to property may result.

If any malfunctions are not included in this manual, contact the local After Sales Service immediately.

The apparatus must be installed in such a way that maintenance and/or repair operations are possible.

The apparatus's warranty does not in any case cover costs due to automatic ladders, scaffolding or other lifting systems necessary for carrying out repairs under guarantee.

AERMEC S.p.A. declines all liability for any damage due to improper use of the machine or the partial or superficial reading of the information contained in this manual.

This manual contains the following number of pages: 56.

TRANSPORT

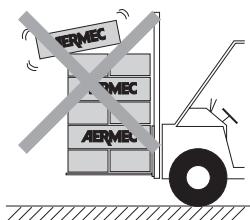

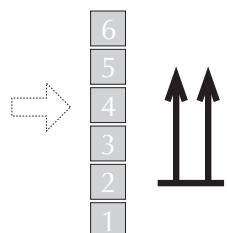

Do NOT wet

Do NOT trample

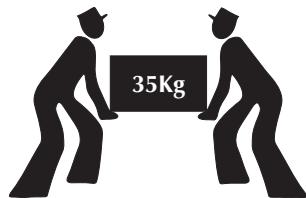

Stacking: control the packing for the arrow position to know the number of machines that can be stacked

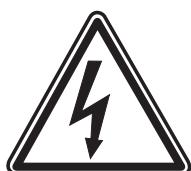

Do NOT leave loose packages during transport

Das Gerät NICHT alleine tragen, wenn sein Gewicht 35 Kg überschreitet.

SAFETY SYMBOL

Danger:
Power supply

Danger:
Moving parts

Danger!!!

MAINTENANCE

ORDINARY MAINTENANCE

The ordinary maintenance, it can also be done by the user, consists of a series of simple operations, thanks to which the fan coil can operate at full efficiency.

Operations:

- External cleaning, weekly, to be done with a damp cloth (soaked in water no hotter than 40 °C) and neutral soap; avoid using any other type of detergent or solvent.
Do not splash water on interior or exterior surfaces of the fan coil (it could cause short circuits).
- Filter cleaning, every two weeks or weekly if installed in very dusty environments. Clean the filter with a vacuum cleaner and possibly with water and neutral detergent, do not use detergents or solvents of any kind.
- Visual inspection of the state of the fan coil for every maintenance operation; every fault must be communicated to the After-Sales Service.

EXTRAORDINARY MAINTENANCE

Extraordinary maintenance can only be performed by Aermec After-Sales Services or by people with the technical and professional requisites qualifying them to undertake installation, conversion, expansion and maintenance of the systems and are able to check them in terms of safety and functionality, in particular with regard to electrical connections the following tests are required relative to:

- Measurement of the electrical system insulation resistance.
- Continuity test of the protection wires.

The extraordinary maintenance consists of a series of complex operations that involve the dismantling of the fan coil or its components thanks to which the condition of maximum fan coil functioning efficiency is restored.

Operations:

- Internal cleaning, annually or after long periods of non use; in environments where a high degree of air cleaning is required, cleaning can be more frequent; consists of the cleaning of the coil, ventilator fins, basin and all the parts in contact with the treated air.
- Repairs and fine tuning, when faults arise look at the "TROUBLESHOOTING" chapter in this manual before calling the After-Sales Service.

TROUBLESHOOTING

PROBLEM	PROBABLE CAUSE	SOLUTION
Insufficient air flow at outlet	Incorrect speed setting on control panel Blocked filter Obstructed air flow (inlet and/or outlet)	Select the correct speed on the control panel Clean the filter Remove the obstacle
Unit does not heat	No hot water Incorrect control panel setting T water > 90°C	Check the heater Check the heat pump Set the control panel properly Reduce the water temperature, then remove and resupply the unit with voltage.
Unit does not cool	No cold water Incorrect control panel setting	Check the chiller Set the control panel
Fan not turning	No electrical power Water has not reached operating temperature.	Check that there is electrical power Check the boiler or the chiller and/or check the setting
Condensation forming on the external case of the unit	Temperature and humidity limits specified by "MINIMUM MEDIUM WATER TEMPERATURE" have been reached	Raise the water temperature to above the limits specified by "MINIMUM MEDIUM WATER TEMPERATURE"

For any problems not listed, contact the After-Sales Service immediately.

DESCRIPTION OF THE UNIT

The **FCW** fan coil for wall mounting is a concentration of top level technological and functional features that make it the ideal climate control unit for all environments.

The supply of climate controlled air is immediate and distributed throughout the room; **FCW** generates heat if included in heating system with boiler or heat pump but it may also be used in the summer as an air conditioner if the system has a water chiller.

MAIN CHARACTERISTICS:

- Three-way water valve incorporated inside it
- **EUROVENT Certified**
- PANTONE colour Cool Grey 1C
- Choice between two different control models (it is not possible to use the two models at the same time).

Infrared remote control unit (TLW1 accessory) with liquid crystal display and support for the wall mounting. The remote control unit enables all the unit's functions to be controlled.

Wired remote panel (PFW accessory) with liquid crystal display with supports to be affixed to the wall, four meter cable. The panel makes it possible to control the main functions of the unit.

The response to the commands is immediate if the

environmental temperature and the temperature of the water in system so allow;

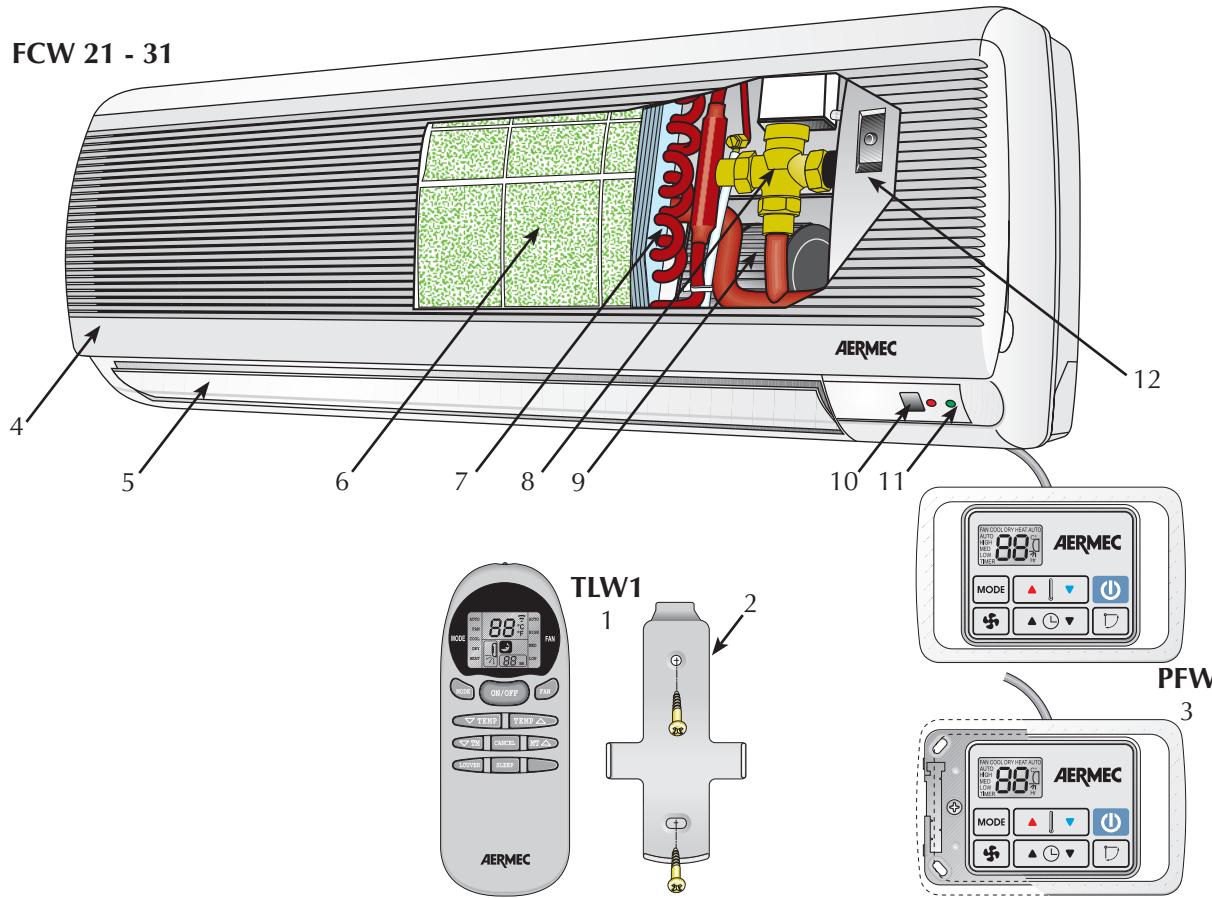

- Three-speed cross flow fan
- Very quiet operation
- High-design appearance with rounded lines
- Air delivery slats with horizontal adjustment facility
- Motorised horizontal air delivery deflector that may be worked with both the remote control unit or the wired remote control unit for the vertical directioning of the output air with continuous or fixed oscillation that can be selected among the four pre-established positions or any other position as required
- Microprocessor control
- Timer for the programming of the turning on or off
- Automatic functioning programme, cooling, heating, ventilation and dehumidification (only with TLW1 remote control unit)
- Automatic season change
- Automatic restart after power outage
- Ease of installation with plumbing connections and condensate drain that can be pointed in several directions
- Routine maintenance is limited to periodic cleaning of the air filter.
- Full compliance with safety regulations.

MAIN COMPONENTS

- 1 TLW1 (remote control unit) accessory
- 2 Support for the wall mounting of the TLW1 remote control unit
- 3 PFW (wired remote panel) accessory
- 4 Front panel
- 5 Horizontal air delivery deflector fin
- 6 Air filter

- 7 Heat exchanger battery
- 8 Three-way water valve
- 9 Fan unit
- 10 Receiver
- 11 Lit indicators (LED)
- 12 Auxiliary emergency switch

FCW 21 - 31

DESCRIPTION OF COMPONENTS

TLW1 (ACCESSORY) REMOTE CONTROL UNIT

Accessory essential for fan coil operation, alternative to the PFW wired remote panel.

The TLW1 remote control unit is provided separately from the fan coil. A single remote control unit can control several fan coils.

The remote control unit makes it possible to set all the operating parameters of the apparatus, these parameters are shown on a liquid crystal display thus making programming operations easier.

The remote control unit is fitted with a support allowing it to be hung on the wall.

PFW WIRED REMOTE PANEL (ACCESSORY)

Accessory essential for fan coil operation, alternative to the TLW1 remote control unit

The panel must be installed on the wall and connected to the fan coil with the cable provided.

The panel cable is four meters long.

The PFW makes it possible to set the MAIN operating parameters of the apparatus, these parameters are shown on a liquid crystal display thus making programming operations easier.

A PFW panel is designed to control just one fan coil.

FRONT PANEL

The air is sucked up by the slots. When raising the panel, one has access to the air filter and to the other internal parts.

RECEIVER

Infra red signal receiver.

LIT INDICATORS (LED)

These indicators show the current operating status.

AIR FILTER

Air filters that can be regenerated are easy to extract for cleaning.

THERMAL EXCHANGE BATTERY

This made of a copper tube with turbulent type aluminium slats.

HORIZONTAL AIR DELIVERY DEFLECTOR

The unit is fitted with a motorised air delivery deflector and vertical slats that can be directed manually in such a way as to optimally orient the air flow.

AUXILIARY EMERGENCY SWITCH

The auxiliary emergency switch makes it possible to turn the fan coil on or off in the absence of a wired remote panel or remote control unit. To access it, raise the front panel

FAN UNIT

The fan unit consists of an extremely small, quiet tangential type fan.

THREE-WAY WATER VALVE

The FCW fan unit comes with a three-way water valve of the all or nothing type with electrothermal actuator controlled by the fan coil card in accordance with the water temperature and the temperature of the ambient air.

GENERAL INFORMATION

The two available command models (PFW and TLW1) provided as required as an obligatory accessory for the functioning allow the turning on, the turning off and all the fan coil control and programming operations.

The two command models cannot be used at the same time on the same fan coil.

The control system checks all the functioning parameters and carries out all the operations necessary to enable the required environmental conditions to be maintained.

The control system also provides some automatic functions to increase comfort and make the most frequently repeated operations easier:

- Minimum temperature sensor, in order to avoid cold air blasts in the winter mode allows ventilation only if the water in the system is hot.
 - **Auto Restart mode, after a power outage the FCW unit starts again automatically with the same settings that it had at the time of the stop (with the exception of the Timer).**
 - Type of operation.
 - Programming of the timer for turning on or turning off.
- Fan speed
- Activation of the motorised air delivery deflector.
 - Three-way water valve control.
- Turning the unit on and off.

SELECTION CRITERIA

FCW is fitted with a standard internal three-way valve.

To function the FCW fan coil requires combination with the remote control (TLW1 accessory) or alternatively the wired remote panel (accessory PFW).

The tables in TAB 1 to 3 show the total chilling yield and sensible to the maximum speed in accordance with the inlet water temperature of its thermal change and air temperature with dry or wet bulb, performance at medium and minimum speeds are obtained by applying the relative correction coefficients.

The diagrams of the tables in TAB. 4 to 6 show the thermal capacity at top speed in accordance with the water flowrate and the inlet water and inlet air temperature difference, for lower speeds refer to the relative correction coefficients.

The diagram in TAB. 7 shows the coil pressure drop in function of the flow rate at a medium temperature of 10°C, for water circulating at different temperatures refer to the relative correction coefficients.

The diagrams in TAB. 8 show the correction factors for fan coils installed in systems with glycolated water.

Tables TAB. 9 and TAB. 10 show the level of sound power of the fan coils at different speeds.

IMPORTANT INFORMATION

WARNING: The fan coil is connected to the power supply and a water circuit. Operations performed by persons without the required technical skills can lead to personal injury to the operator or damage to the unit and surrounding objects.

MALFUNCTIONING

In the case of malfunctioning remove the power to the unit then repower it and start the apparatus up again. If the problem occurs again, call your areas After-Sales Service promptly.

POWER THE FAN COIL ONLY WITH 230 VOLT, SINGLE PHASE, 50 Hz

Use of other power supplies could cause permanent damage to the fan coil.

USE THE (TLW1) REMOTE CONTROL UNIT OR THE WIRED REMOTE PANEL (PFW) TO TURN THE FAN COIL ON AND OFF

Do not turn the fan coil on or off using the auxiliary switch unless it is an emergency.

DO NOT TUG THE ELECTRICAL CABLE

It is very dangerous to pull, tread on or crush the electrical power cable or fix it with nails or drawing pins.

A damaged power cable can cause short circuits and personal injury.

DO NOT PUT ANYTHING IN THE AIR OUTLETS

Do not put anything at all in the air outlet slots. This could cause injury to people and damage to the fan.

DO NOT USE THE FAN COIL IMPROPERLY

Do not use the fan coil in animal husbandry applications (e.g. incubation).

AIRING THE ROOM

Periodically air the room in which the fan coil has been installed; this is particularly important if the room is occupied by many people, or if gas appliances or sources of odours are present.

CORRECTLY REGULATING THE TEMPERATURE

The room temperature should be regulated in order to provide maximum comfort to the people in the room, especially if they are elderly, children or ill, avoiding sudden changes in temperature between the outside and inside above 7 °C in summer.

Careful choice of the room temperature will lead to energy savings.

CORRECTLY ADJUSTING THE AIR JET

The area coming out of the fan coil must not strike people directly; in fact, even if at a temperature that is higher than the room temperature, it could cause a cold sensation and resulting discomfort. Only adjust the vertical slats by hand. For the horizontal air delivery deflector, use the LOUVRE key of the remote control unit or SWING key on the wired remote panel.

DURING OPERATIONS

Always leave the filter on the fan coil during operation (otherwise dust in the air could soil the coil surface area).

WHAT IS NORMAL

During cooling function, water vapour may be present in the air delivery.

In heating function it might be possible to hear a slight hiss around the fan coil. Sometimes the fan coil might give off unpleasant smells due to the accumulation of dirt in the air of the environment (especially if the room is not ventilated regularly, clean the filter more often).

OPERATING LIMITS

Maximum water inlet temperature 70 °C

Maximum working pressure 13 bar

The assembly site must be chosen in such a way that the maximum and minimum ambient temperature limits Ta are respected $0^{\circ}\text{C} < \text{Ta} < 45^{\circ}\text{C}$; R.H. < 85%.

The fan coils are powered with a voltage of 230V monophase at 50 Hz and ground connection, in any case the power of the line must remain within the limit of $\pm 10\%$ with respect to the nominal value.

Water flow limits:

MOD.	FCW	21	31	41
Minimum water flow	[l/h]	100	100	150
Maximum water flow	[l/h]	750	750	1100

Average minimum water temperature

To prevent the formation of condensation on the exterior of the unit while the fan is operating, the average water temperature should not drop beneath the limits shown in the table below, determined by the ambient conditions. These limits refer to unit operation with fan at minimum speed.

MINIMUM AVERAGE WATER TEMPERATURE

Wet bulb temperature °C	Dry bulb temperature °C

Power supply = 230 V ~ 50 Hz (± 10 %).

(E) =  Eurovent Certified Performance

Performance values refer to the following conditions:

- supply voltage 230 V ~ 50 Hz;
- ♪ level of sound pressure (weighted A) measured in the environment with volume V = 85 m³, reverberation time t = 0.5 s, direction factor Q = 2, distance r = 2.5 m.

*** heating:**

- Inlet Water temperature 70°C room air temperature = 20°C B.S.;
- maximum ventilation speed: Δt water= 10°C ;
- medium and minimum ventilation speed: water flow rate as maximum ventilation speed;

**** heating (water inlet 50°C)**

water inlet temperature 50°C room air temperature = 20°C B.S.;

- maximum ventilation speed: water flow rate in cooling mode at maximum ventilation speed;

*** cooling:**

inlet water temperature = 7°C room air temperature = 27°C B.S.; 19°C B.U.;

- maximum ventilation speed: Δt water= 5°C ;
- medium and minimum ventilation speed: water flow rate as maximum ventilation speed;

Cooling capacities are referred to high speed.

To obtain values for other speed, multiply the values read by following factors:

MOD.	FCW 21	
Medium speed	total capacity	0,89
	sensible capacity	0,87
Minimum speed	total capacity	0,76
	sensible capacity	0,71

Water flow rate as at maximum ventilation speed;

T_w [°C] = Inlet water temperature

T_a w.b. [°C] = Inlet wet bulb air temperature

T_a b.s. [°C] = Dry bulb air temperature

P_c [W] = Total cooling capacity

P_s [W] = Sensible cooling capacity

NOTE: Values of capacity in bold face refer to nominal value.

Values of sensible capacity higher than values of total capacity mean that cooling is without dehumidification in this case consider only the values of sensible capacity.

COOLING CAPACITY

Cooling capacities are referred to high speed.

To obtain values for other speed, multiply the values read by following factors:

MOD.

FCW 31

Medium speed	total capacity	0,81
	sensible capacity	0,79
Minimum speed	total capacity	0,68
	sensible capacity	0,65

Water flow rate as at maximum ventilation speed;

T_w [°C] = Inlet water temperature

T_a w.b. [°C] = Inlet wet bulb air temperature

T_a b.s. [°C] = Dry bulb air temperature

P_c [W] = Total cooling capacity

P_s [W] = Sensible cooling capacity

NOTE: Values of capacity in bold face refer to nominal value.

Values of sensible capacity higher than values of total capacity mean that cooling is without dehumidification in this case consider only the values of sensible capacity.

Cooling capacities are referred to high speed.

To obtain values for other speed, multiply the values read by following factors:

MOD.	FCW 41	
Medium speed	total capacity	0.91
	sensible capacity	0.88
Minimum speed	total capacity	0.79
	sensible capacity	0.75

Water flow rate as at maximum ventilation speed;

T_w [°C] = Inlet water temperature

T_a w.b. [°C] = Inlet wet bulb air temperature

T_a b.s. [°C] = Dry bulb air temperature

P_c [W] = Total cooling capacity

P_s [W] = Sensible cooling capacity

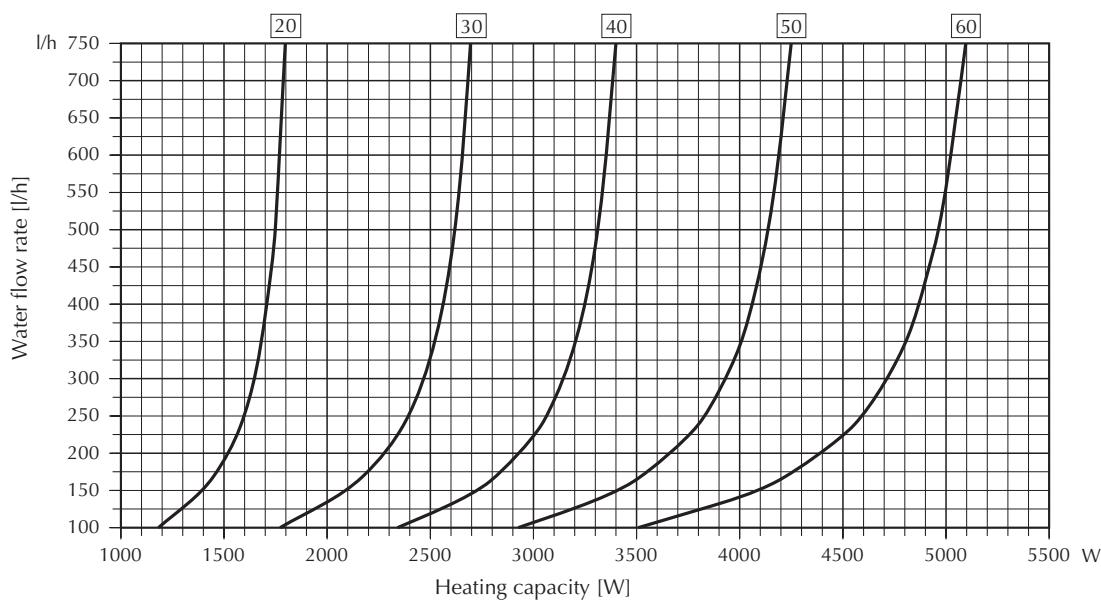

NOTE: Values of capacity in bold face refer to nominal value.

Values of sensible capacity higher than values of total capacity mean that cooling is without dehumidification in this case consider only the values of sensible capacity.

HEATING CAPACITY

TAV. 4 FCW 21

Δt °C (water inlet temperature- air inlet temperature)

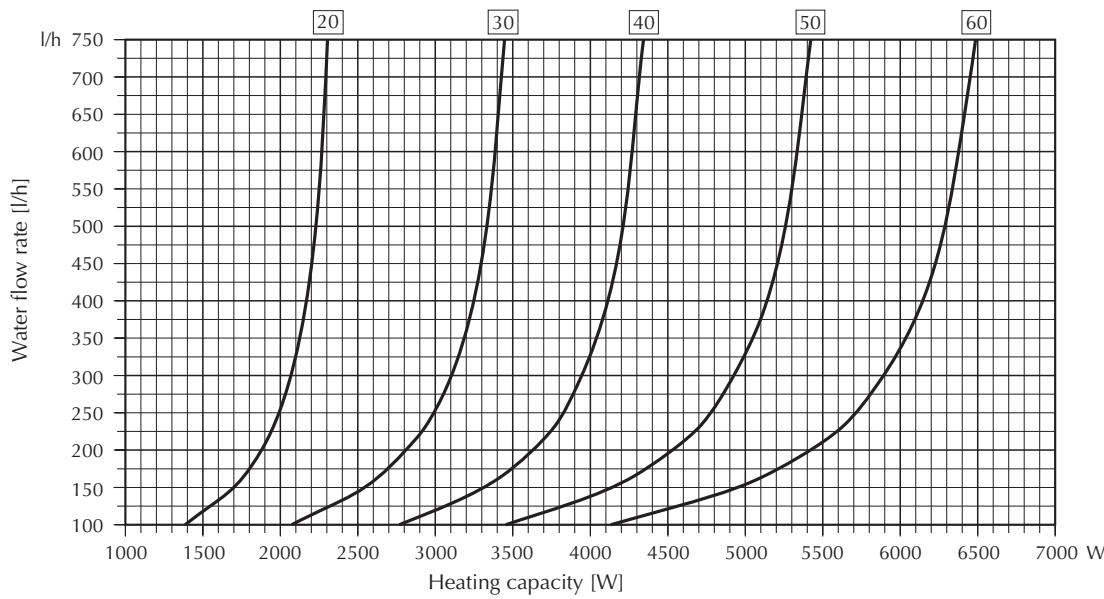

Heating capacity figures refer to maximum fan speed. Performance for other fan speeds can be obtained by multiplying these figures by the following correction factors:

MOD.	FCW 21	Medium speed	Minimum speed
		0,90	0,75

TAV. 5 FCW 31

Δt °C (water inlet temperature- air inlet temperature)

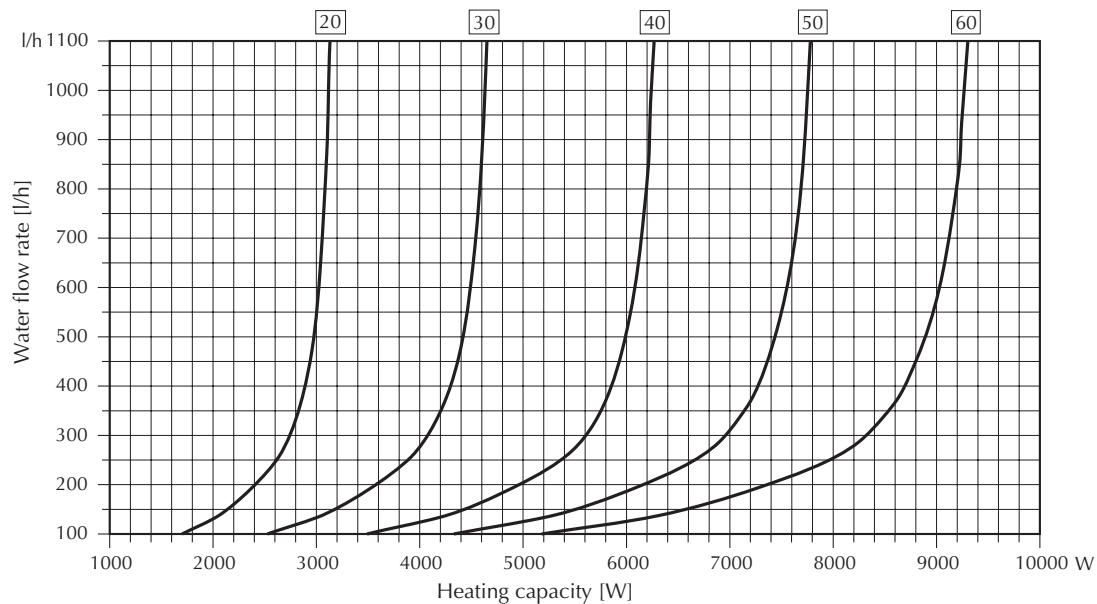

Heating capacity figures refer to maximum fan speed. Performance for other fan speeds can be obtained by multiplying these figures by the following correction factors:

MOD.	FCW 31	Medium speed	Minimum speed
		0,88	0,76

HEATING CAPACITY

TAV. 6 FCW 41

Δt °C (water inlet temperature- air inlet temperature)

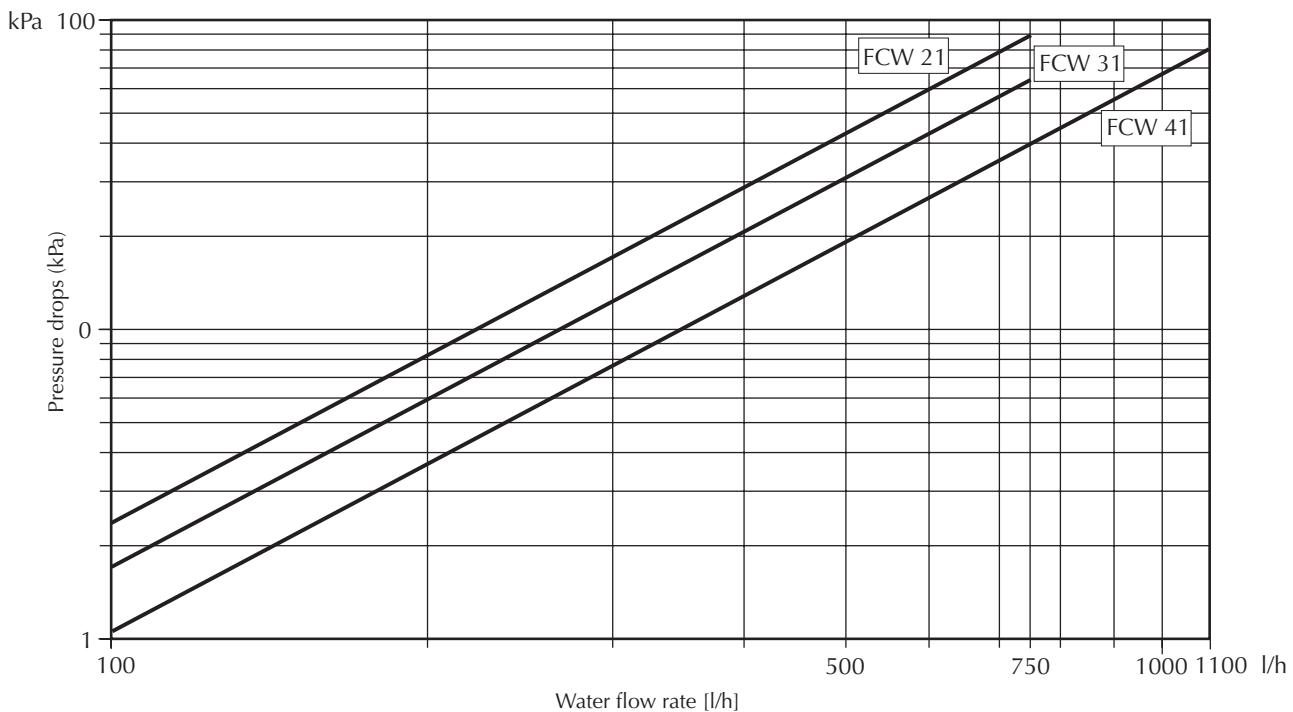

Heating capacity figures refer to maximum fan speed. Performance for other fan speeds can be obtained by multiplying these figures by the following correction factors:

MOD.	FCW 41	Medium speed	Minimum speed
		0,75	0,90

COIL PRESSURE DROPS

TAV. 7

The pressure drops in the diagram refer to the average water temperature of 10 °C. The following table shows the correction to apply to the pressure drops when the medium water temperature varies.

Medium water temperature	°C	5	10	15	20	50	60	70
Multiplicational coefficient		1,03	1	0,96	0,91	0,78	0,75	0,72

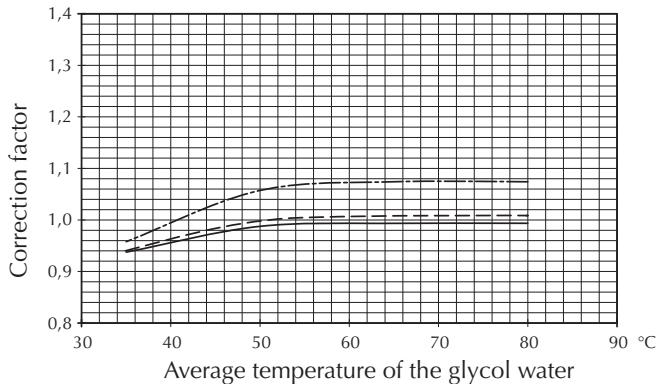

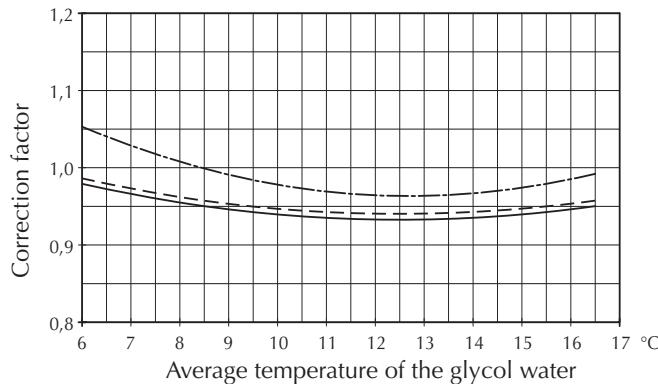

CORRECTION FACTORS WITH GLYCOL WATER

TAV. 8

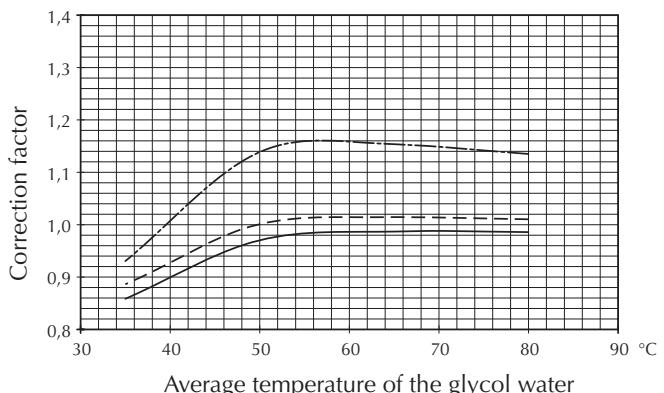

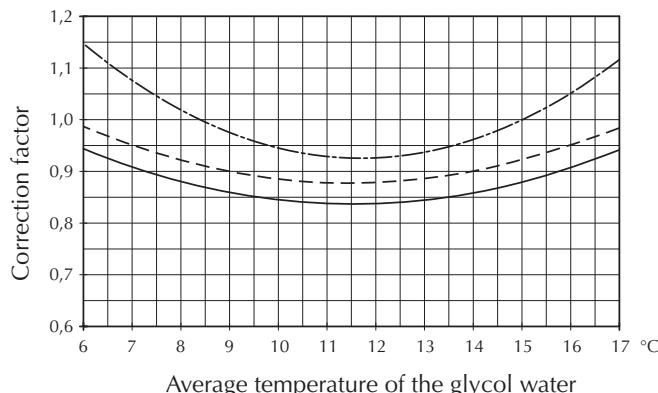

COOLING

HEATING

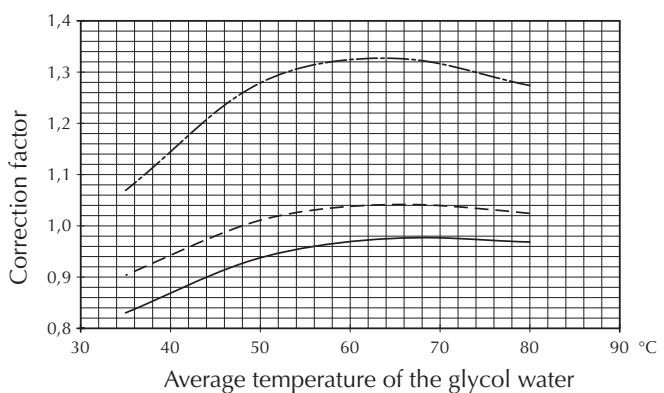

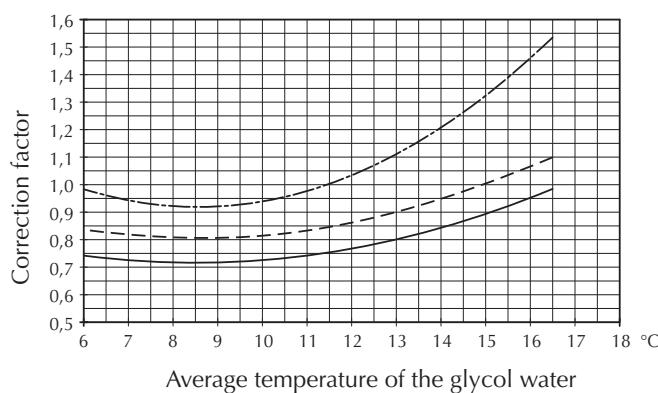

GLYCOL WATER AT 10%

GLYCOL WATER AT 20%

GLYCOL WATER AT 35%

Reading key:

- · Pressure drops
- - - Water flow
- Capacity

Aermec partecipa al Programma di Certificazione EUROVENT. I prodotti interessati figurano nella Guida EUROVENT dei Prodotti Certificati.

Aermec is participating in the EUROVENT Certification Programme. Products are as listed in the EUROVENT Directory of Certified Products.

Aermec participe au Programme de Certification EUROVENT. Les produits figurent dans l'Annuaire EUROVENT des Produits Certifiés.

Aermec ist am Zertifikations - Programm EUROVENT beteiligt. Die entsprechend gekennzeichneten Produkte sind im EUROVENT - Jahrbuch aufgeführt.

AERMEC S.p.A. participa en el programa de certificación EUROVENT. Sus equipos aparecen en el directorio de productos certificados EUROVENT.

I dati tecnici riportati nella presente documentazione non sono impegnativi.

AERMEC S.p.A. si riserva la facoltà di apportare in qualsiasi momento tutte le modifiche ritenute necessarie per il miglioramento del prodotto.

Les données mentionnées dans ce manuel ne constituent aucun engagement de notre part. Aermec S.p.A. se réserve le droit de modifier à tous moments les données considérées nécessaires à l'amélioration du produit.

Technical data shown in this booklet are not binding.

Aermec S.p.A. shall have the right to introduce at any time whatever modifications deemed necessary to the improvement of the product.

Im Sinne des technischen Fortschrittes behält sich Aermec S.p.A. vor, in der Produktion Änderungen und Verbesserungen ohne Ankündigung durchzuführen.

Los datos técnicos indicados en la presente documentación no son vinculantes.

Aermec S.p.A. se reserva el derecho de realizar en cualquier momento las modificaciones que estime necesarias para mejorar el producto.
