

## REVERSIBLE HEAT PUMP - Technical Manual

### WATER/WATER HEAT PUMP

- INDOOR UNIT
- HIGH EFFICIENCIES
- PRODUCTION OF HOT WATER UP TO 60°
- USED FOR GEOTHERMAL APPLICATIONS
- REVERSIBLE GAS SIDE

**WRL-H  
025/160**

Aermec  
participate in the EUROVENT  
program: LCP/W/P/C.  
the products are present on the site

GB

Dear Customer,

Thank you for choosing an AERMEC product. This product is the result of many years of experience and in-depth engineering research, and it is built using top quality materials and advanced technologies.

In addition, the CE mark guarantees that our appliances fully comply with the requirements of the European Machinery Directive in terms of safety. We constantly monitor the quality level of our products, and as a result they are synonymous with Safety, Quality, and Reliability.

*Product data may be subject to modifications deemed necessary for improving the product without the obligation to give prior notice.*

Thank you again.

SERIAL NUMBER	
---------------	--

**DECLARATION OF CONFORMITY**

We, the undersigned, hereby declare under our own responsibility that the assembly in question, defined as follows:

**NAME** WRL-H

**TYPE** WATER-COOLED REVERSIBLE HEAT PUMPS

**MODEL**

To which this declaration refers, complies with the following harmonised standards:

**IEC EN 60335-2-40**

Safety standard regarding electrical heat pumps, air conditioners and dehumidifiers

**IEC EN 61000-6-1**

Immunity and electromagnetic emissions for residential environments

**IEC EN 61000-6-3**

**IEC EN 61000-6-2**

Immunity and electromagnetic emissions for industrial environments

**IEC EN 61000-6-4**

**EN378**

Refrigerating system and heat pumps - Safety and environmental requirements

**UNI EN 12735**

Seamless, round copper tubes for air conditioning and refrigeration

**UNI EN 14276**

Pressure equipment for cooling systems and heat pumps

**Thereby, compliant with the essential requirements of the following directives:**

- LVD Directive: 2006/95/CE

- Electromagnetic Compatibility Directive 2004/108/CE

- Machinery Directive 2006/42/CE

- PED Directive regarding pressurised devices 97/23/CE

The product, in agreement with Directive 97/23/CE, satisfies the Total quality Guarantee procedure (form H) with certificate no. 06/270-QT3664 Rev. 5 issued by the notified body n.1131 CEC via Pisacane 46 Legnano (MI) - Italy

The person authorised to constitute the technical file is: / The person authorised to compile the technical file is: / La personne autorisée à constituer le dossier technique est: / Die Person berechtigt, die technischen Unterlagen zusammenzustellen:

**Standards and Directives respected when designing and constructing the unit:**

**Safety:**  
**Machinery Directive**  
2006/42/CE

**Low Voltage Directive**  
LVD 2006/95/CE

**Electromagnetic Compatibility Directive**

**EMC 2004/108/CE**

**Pressure Equipment Directive**  
PED 97/23/CE EN 378,  
UNI EN 14276

**Electric part:**  
EN 60204-1

**Acoustic part:**  
SOUND POWER  
(EN ISO 9614-2)  
SOUND PRESSURE  
(EN ISO 3744)

**Certifications:**  
Eurovent

**Refrigerant GAS:**  
This unit contains fluoride gases with greenhouse effect covered by the Kyoto Protocol. Maintenance and disposal must only be performed by qualified staff.

## 1. GENERAL WARNINGS

The WRL-H AERMEC heat pumps are constructed according to the recognised technical standards and safety regulations. They are designed for summer and winter conditioning and the production of domestic hot water. Any contractual or extracontractual liability of the Company is excluded for injury/damage to persons, animals or objects owing to installation, regulation and maintenance errors or improper use. All uses not expressly indicated in this manual are prohibited.

### 1.1. PRESERVATION OF THE DOCUMENTATION

The instructions along with all the related documentation must be given to the user of the system, who assumes the responsibility to conserve the instructions so that they are always at hand in case of need.

Read this sheet carefully; the execution of all works must be performed by qualified staff, according to Standards in force on this subject in different countries. (Ministerial Decree 329/2004).

### 1.2. INSTALLATION

The unit must be installed in such a way that maintenance and/or repairs can be carried out.

## 1.3. WARRANTY

The appliance warranty does not cover the costs for ladder trucks, scaffolding, or other elevation systems that may become necessary for carrying out servicing under warranty.

Do not modify or tamper with the heat pump as dangerous situations can be created and the manufacturer will not be liable for any damage caused. The validity of the warranty shall be void in the event of failure to comply with the above-mentioned indications.

## 1.4. WARNINGS REGARDING SAFETY AND INSTALLATION STANDARDS

- The cooler must be installed by a qualified and suitably trained technician, in compliance with the national legislation in force in the country of destination (Ministerial Decree 329/2004).

**AERMEC will not assume any responsibility for damage due to failure to follow these instructions.**

- Before beginning any operation, **READ THESE INSTRUCTIONS CAREFULLY AND CARRY OUT THE SAFETY CHECKS TO AVOID ALL RISKS.** All the staff involved must have thorough knowledge of the operations and any dangers that may arise at the moment in which the installation operations are carried out.

## 2. PRODUCT IDENTIFICATION

The WRL-H heat pumps can be identified by:

### - PACKING LABEL

which shows the product identification data

- TECHNICAL PLATE (see position chap. 2.1.).

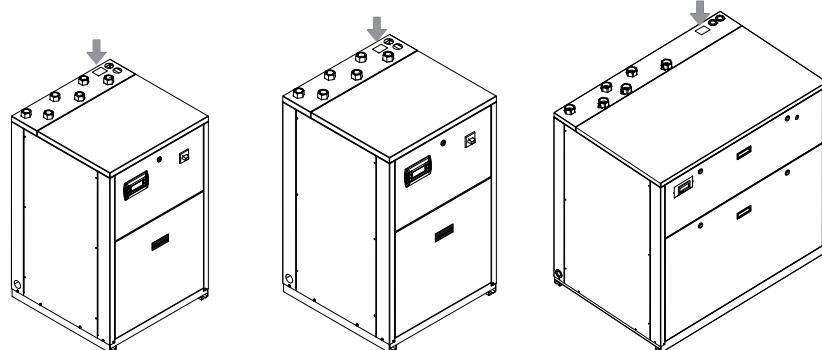

▲  
example of technical plate

### 2.1. TECHNICAL PLATE POSITION

#### ATTENTION

Tampering, removal, lack of the identification plate or other does not allow the safe identification of the product and will make any installation or maintenance operation to be performed difficult.

### 3. PRESENTATION

AERMEC presents the new **WRL-H, UNITS, GAS SIDE REVERSIBLE HEAT PUMPS, OPTIMISED FOR GEOTHERMIC SYSTEMS** that are water-cooled and operate with R410A refrigerant.

They are **INDOOR UNITS** with hermetic scroll compressors that perfectly meet the requirements of the residential market:

#### High performance

These units have been designed optimising functioning in heat pump mode, allowing to reach high efficiencies.

#### Easy installation

The electric and hydraulic connections

are all positioned in the upper part of the unit facilitating the installation and maintenance operations. This also allows to reduce the technical spaces and their positioning in as smaller space possible.

#### Silent

The WRL-H units are distinguished for its working silence. Careful soundproofing of the unit with suitable sound-absorbent material confer all units with noise limits such to consent the use of the WRL-H heat pumps also in homes and not necessarily in dedicated technical rooms.

#### Dynamic set point

The electronic regulation, via the aid of an external air temperature probe (ACCESSORY) and according to the

external conditions, automatically modifies the set point of the system water temperature, thereby improving the energy efficiency of the system. optimised for:

#### 1. GEOTHERMIC SYSTEMS

Production of water for heating systems for systems with FAN COILS, RADIANT PANELS OR LOW TEMPERATURE RADIATORS, up to 60°C.

#### 2. PRIORITY PRODUCTION OF DOMESTIC HOT WATER (DHW).

Production of DHW with priority logic is guaranteed in summer and winter mode.

### 4. SYSTEM EXAMPLES

The WRL heat pump can manage up to a maximum of 3 ZONES

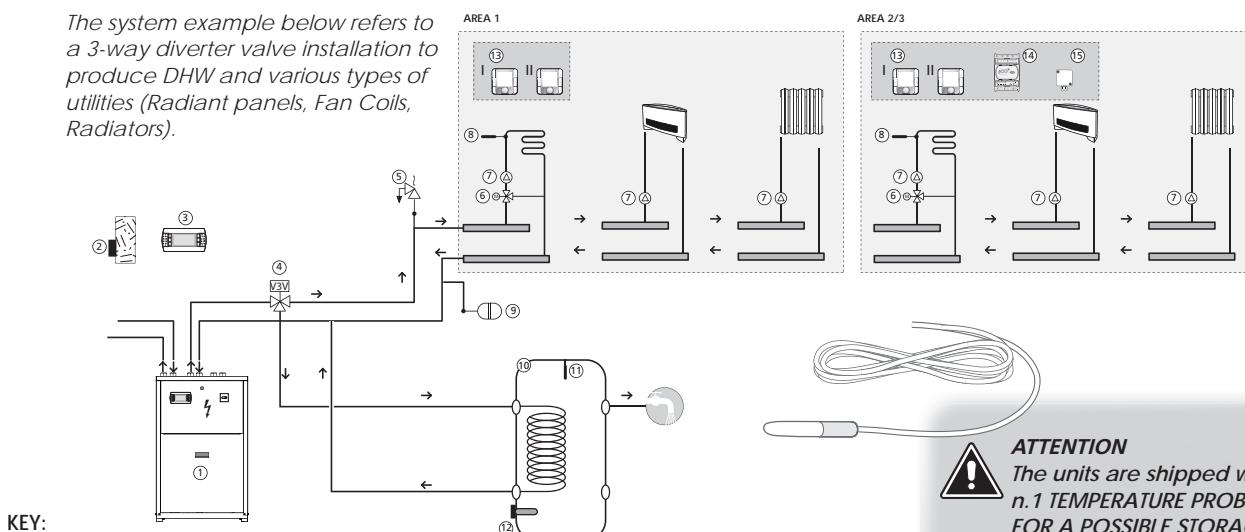

ZONE N° 1: Managed as per standard thanks to last generation electronic regulation. It is recommended to mount the "SSM" electronic marking probe (accessory) to control the flow temperature. (The unit is shipped with n.1 temperature probe for a possible DHW storage tank.)

ZONE 2 and ZONE 3 are managed using the VMFCRP + SSM accessories for each zone.

E.G. The heat pump is connected directly to the utility circuit (SYSTEM) and produces domestic hot water (DHW) via the management of a 3-way diverter valve, connected to a storage tank.

**The DHW production has priority over that of the system.**

*The system example below refers to a 3-way diverter valve installation to produce DHW and various types of utilities (Radiant panels, Fan Coils, Radiators).*

#### Examples of hydraulic layouts

#### NOTE:

#### VMFCRP can control:

1. n° 2 STA/STH or n° 2 pumps (digital contacts).
2. n° 1 mixing valve (analogue contact) - SSM probes kit necessary.

## 6. DESCRIPTION OF COMPONENTS

### 6.1. STRUCTURE

#### Base and support structure

Made up from hot galvanised sheet steel elements with suitable thickness. All parts painted with polyester powder paints (RAL 9002), resistant to atmospheric agents. Realised in a way to allow total accessibility to the components internal components. All panels are covered with sound-absorbent material with suitable thickness.

### 6.2. COOLING CIRCUIT

#### Compressor

High efficiency scroll hermetic compressors (mounted on anti-vibration supports), activated by a 2-pole electric motor with internal heat protection.

#### Evaporator

Plate type (AISI 316). It is insulated externally with closed cell material to reduce thermal dispersions.

#### Condenser

Plate type (AISI 316). It is insulated externally with closed cell material to reduce thermal dispersions.

#### Dehydrator filter,

Hermetic-mechanical with cartridges made of ceramic and hygroscopic material, able to withhold impurities and any traces of humidity present in the cooling circuit. Biflow type up to model 080.

#### Indicator for liquid passage with humidity presence signal,

Used to check the refrigerant gas load and the eventual presence of humidity in the cooling circuit.

#### Electronic thermostatic valve

##### (STANDARD FOR ALL MODELS).

The valve modulates the flow of gas to the evaporator, according to the heat load, in order to ensure a correct heating level of the intake gas.

#### One-way valves

##### (FOR MODELS 100-140-160).

Allows the passage of the refrigerant in just one direction.

#### 4-way cycle reverse valve

Inverts the flow of refrigerant gas.

### 6.3. MAIN OPERATIONS

The WRL-H heat pumps are supplied as per standard with:

- **Water filter;** Equipped with steel filtering mesh; prevents the heat exchangers from clogging.

- **Differential pressure switch;** It checks that there is water circulation inside the heat exchangers. Adversary, it blocks the unit
- **Safety valve (6 bar).** Equipped with a piped discharger and intervenes by discharges the over pressure in case of anomalous pressures.
- **Expansion tank (for version with storage tank/storage tank+pumps)** With nitrogen pre-load membrane.
- **Air vent**
- **Drain cock**
- **Cut-off cock**

Below find the description of the hydraulic components, present in the various other versions. **WRLH<sup>°</sup>TBPQ**.

### 6.4. WATER FEATURES

PH	6-8
Electric conductivity	less than 200 mV/cm (25°C)
Chloride ions	less than 50 ppm
Sulphuric acid ions	less than 50 ppm
Total iron	less than 0.3 ppm
Alkalinity M	less than 50 ppm
Total hardness	less than 50 ppm
Sulphur ions	none
ammonia ions	none
Silicone ions	less than 30 ppm

### 6.5. COMPONENTS THAT CAN BE CONFIGURED

The components that can be selected by the configurator are:

- **3-speed ON/OFF pump (up to 080 model) or standard three-phase one-speed pump for 100-140-160 models.**
- Larger single speed three phase pump (100-140-160 models).
- Pump with phase cut set-up (up to 080 model).
- Inverter pump (up to 080 model).
- Storage tank; "100 litres WRL 025-080", "150 litres WRL 100-160".  
The following is available for well/sheet water applications:
- **2-way modulating valve (0÷10 V signal).** Maximum differential pressure 4bar/40kPa.

**ATTENTION:**  
*In case of power failure the valve remains locked in the working position. In order to avoid unnecessary water consumption, it is recommended to install, upstream of the water mains supply, a shut-off device*

### 6.6. DHW SIDE HYDRAULIC COMPONENTS

- **Water filter;** Equipped with steel filtering mesh; prevents the heat exchangers from clogging.
- **TOTAL RECOVERY (OPTIONAL)** Plates type (AISI 316), it is insulated externally with closed cell material to reduce heat loss.

*In the event of installation (pump/external total recovery) for correct functioning of the machine it is mandatory that it is managed by the regulation of the same.*

### 6.7. SAFETY AND CONTROL

#### Low pressure transducers

Placed on the low pressure side of the cooling circuit, it signals the work pressure to the control board, generating a pre-warning in case of anomalous pressures.

#### High pressure transducer

Placed on high pressure side of cooling circuit, signals the work pressure to control board, generating a pre-warning in case abnormal pressure occurs.

#### High pressure pressure switch

With fixed calibration, placed on high pressure side of cooling circuit, inhibits functioning of compressor if abnormal work pressure occurs.

#### Watertemperature probe (DHW);

The unit is delivered supplied with n° 1 temperature probe for any DHW tank.

### 6.8. ELECTRIC CONTROL BOARD AND REGULATION

Electric power and control board, manufactured in compliance with the EN 60204-1/IEC 204-1 Standards, complete with:

- door lock main isolating switch,
- magnet circuit breaker switches and contactors for compressors,
- phase sequence control,
- clamps for signalling the remote alarm,
- clamps for signalling compressor switch-on status,
- clamps for differential pressure switch alarm signal,
- clamps for external air temperature probe (ACCESSORY),
- soft-start (OPTIONAL),
- control circuit numbered cables,
- clamps for 3-way valve,
- 0-10V clamps for modulating valve control.

#### "Chiller" water set-point compensation due to external temp.

Adaptation of the unit set point depending on the external temperature, allowing greater comfort and energy saving. **The**

#### PGD1 GRAPHIC TERMINAL

- backlit
- LCD
- Icons to identify the type of operation.

*system return Set Point is established in accordance with the external air temperature. Function guaranteed if the external air probe is present (ACCESSORY).*

#### Electronic controller µPC

The device is the new controller for management of the water-cooled reversible units; the new PGD1 8-digit display is clearly legible, while the icons provide immediate visibility of machine operation.

Some accesses are protected by password and only available to the after-sales technical service.

The electronics also integrates a series of protection algorithms with the purpose of preventing any damage to the main components of the system.

#### FUNCTIONALITY LIST:

1. Parameterisation of the compressor switch-on/off times prevent switch on/off activation at short intervals.
2. In order to prevent breakage of the plate heat exchanger due to freezing water, 3 antifreezes, "geothermic, system and zones" are envisioned which are contained within. The microprocessor also envisions compressor block, whenever the temperature detected by the heat exchanger output probe is lower than the anti-freeze set.
3. Water flow rate alarm activated by the differential pressure switches installed in series.
4. Condensation control is managed via speed modulation of the pumps with phase cut systems or inverters, a 2-way modulating valve and ON/OFF pumps.
5. Production of DHW through a 3-way diverter valve or the total recovery version.

#### Additional functions:

- Control of an external integration resource dedicated to DHW.
- System control with heat pump and boiler.
- Anti-Legionella cycle.
- Time periods for the daily / weekly programming.

#### Heat regulation

**⚠** Temperature regulation is based *on the return water from the system*. The configured set points refer to the temperature of the return water. If, for example, the set point is set at +30°C, a flow temperature of +35°C results.

#### System side circulation pump

The circuit board envisions an output for the management of the circulation pump, always on in COOLING and HEATING mode, switched off with a delay of 1 minute from unit switch off (stand-by).

#### Source side pump

The circuit board envisions an output for the source side pump control (see pumps available at configurator). The source side pump is switched on before start up of the compressor and switched off about 30

seconds after the compressor is switched off.

#### Anti-freeze alarm

**⚠** The anti-freeze function is only active if the unit is ON or in stand-by.

In order to prevent breakage of the plate heat exchanger due to freezing of the water it contains, the micro processor envisions the compressor blocking if the temperature detected by the heat exchanger output probe results less than +4°C.

**THIS ANTI-FREEZE SET TEMPERATURE CAN ONLY BE VARIED BY AN AUTHORISED AFTER-SALES CENTRE AND ONLY AFTER HAVING CHECKED THAT THERE IS ANTI-FREEZE SOLUTION IN THE WATER SYSTEM.**

The intervention of this alarm determines compressor and block but not of the pump, which remains active.

#### Domestic hot water anti-freeze

The DHW anti-freeze function is only active if it has an integration resource dedicated to the storage of domestic hot water.

The integration resource is activated if the temperature of the water detected by the sanitary probe is less than +4°C and is switched off at +7°C.

#### Wizard

To facilitate commissioning the unit, a start-up procedure has been created. This procedure is used upon the first start-up.

#### Supervision system

- MODBUS

**⚠** For other requirements, contact the head office.

## 7. ACCESSORIES

- **AER485P1:** RS-485 interface for supervising systems with MODBUS protocol.
- **VT:** Anti-vibration mounts, group of 4/6 anti-vibration mounts to assemble under the unit's sheet steel base.
- **STA:** Room temperature probe, 230Vac recess kit containing the room probe with display and regulation knob, able to control an ON-OFF valve or a zone pump
- **STH:** Room/humidity temperature probe. 230Vac recess kit containing the room and humidity probe with display and regulation knob. The STH probe can control an ON-OFF valve or a zone pump and the dehumidifier.
- **SSM:** Probe to be used together with the mixer valve in applications with radiant panels. Accessory to be requested along with VMFCRP zone accessory.
- **S...I:** System storage tanks; available in sizes 200, 300, 400 and 500 litres (S200I, S300I, S400I and S500I).
- **PGD1:** Simplified remote panel. Allows to perform the basic controls of the unit with alarm signals. Can be controlled from a max of 500 m with 2 PAIRS of TWISTED cable + SHIELD with shielded pairs and TCONN6J000.
- **KSAE:** External air probe. Temperature probe with plastic container.
- **VMFCRP:** Zones Management;
- The WRL heat pump, can manage up to a maximum of n° 3 zones with the following methods:
  - Zone n° 1: Managed as per standard thanks to last generation electronic regulation. It is recommended to mount the "SSM" electronic marking probe (accessory) to control the flow temperature.
  - **The unit is shipped with n.1 temperature probe for a possible DHW storage tank.**
  - Management of the Zone 2 and Zone 3 is possible using the VMFCRP + SSM accessories for each zone.

<sup>[1]</sup> Minimum content of water in case of process applications, or operating with low load.

<sup>[2]</sup> Sound power; Aermec determines the sound power value on the basis of measurements taken in accordance with standard 9614-2, in compliance with the Eurovent certification.

<sup>[3]</sup> Sound pressure in an unrestricted range on a reflective plane (directional fact. Q=2), 1m away from the unit external surface, complying with ISO 3744.

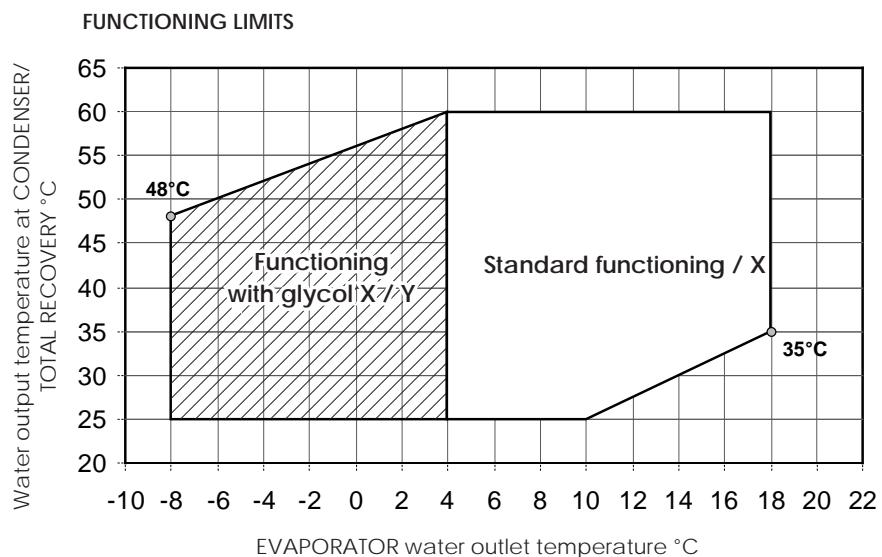

<sup>[4]</sup> Sound pressure in an unrestricted range on a reflective plane (directional fact. Q=2), 10m away from the unit external surface, complying with ISO 3744.

## 8. OPERATING LIMITS

The operating limits diagram is relative to a  $\Delta t$  on the evaporator and the condenser of 5°C.

Condenser outlet *inlet difference* ( $\Delta tc$ ):  
min: 5°C.  
max: 22°C.

Evaporator outlet *inlet difference* ( $\Delta te$ ):  
min: 3°C.  
max: 10°C.

---

## 8.1. DESIGN DATA

---

REFRIGERANT SIDE		High pressure side	Low pressure side
Acceptable maximum pressure	bar	42	25
Acceptable maximum temperature	°C	120	50
Acceptable minimum temperature	°C	-25	-25

## 9. PERFORMANCE AND ABSORPTION THAT DIFFER FROM THE NOMINAL - STANDARD VERSIONS.

## 10. PRESSURE DROPS

### FUNCTIONING IN HEATING MODE

#### CONDENSER

#### EVAPORATOR

The tables state the correction to apply to the pressure drops on variation of the average temperature.

The minimum flow rates have been calculated with reference to the features of the water flow rate control device (differential pressure switch).

**— — — = "field of application not accepted with standard pump". CONTACT THE HEAD OFFICE.**

#### Condenser

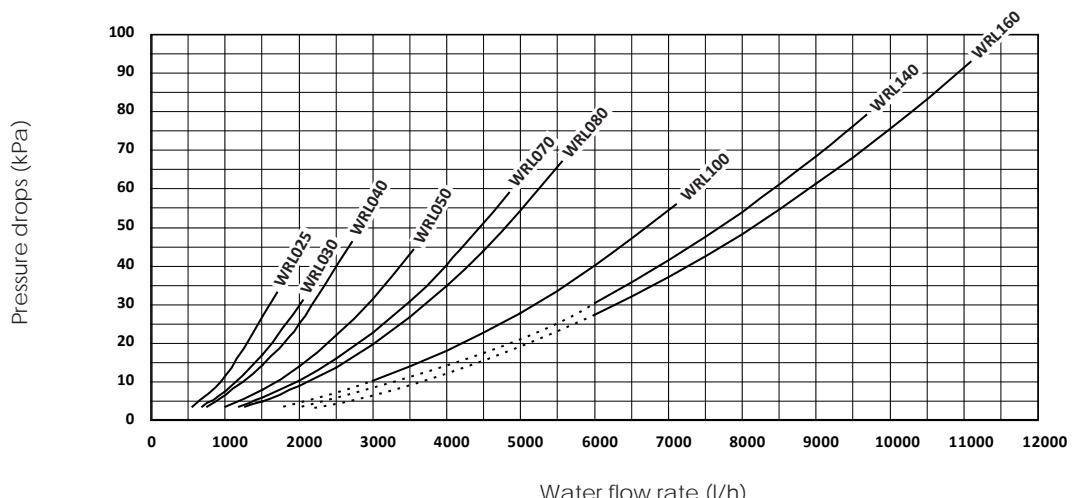

Average water temperature °C	23	28	<b>33</b>	38	43	48	53	58
Multiplicative coefficient	1,02	1,01	<b>1,00</b>	0,99	0,98	0,97	0,96	0,95

#### Evaporator

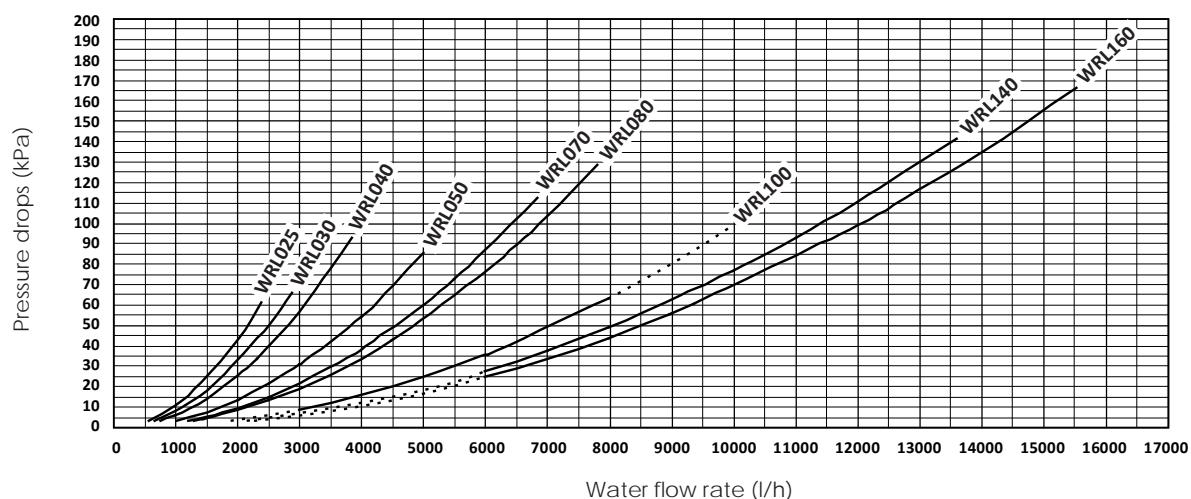

Average water temperature °C	5	<b>10</b>	15	20	25	30	35
Multiplicative coefficient	1,02	<b>1,00</b>	0,98	0,97	0,96	0,95	0,94

## COOLING MODE FUNCTIONING

### CONDENSER/TOTAL RECOVERY

### EVAPORATOR

The tables state the correction to apply to the pressure drops on variation of the average temperature.

**⚠** The minimum flow rates have been calculated with reference to the features of the water flow rate control device (differential pressure switch).

**⚠** - - - = "field of application not accepted with standard pump". CONTACT THE HEAD OFFICE.

#### Condenser

Average water temperature °C	23	28	<b>33</b>	38	43	48	53	58

## VERSION WITH STORAGE TANK "A"

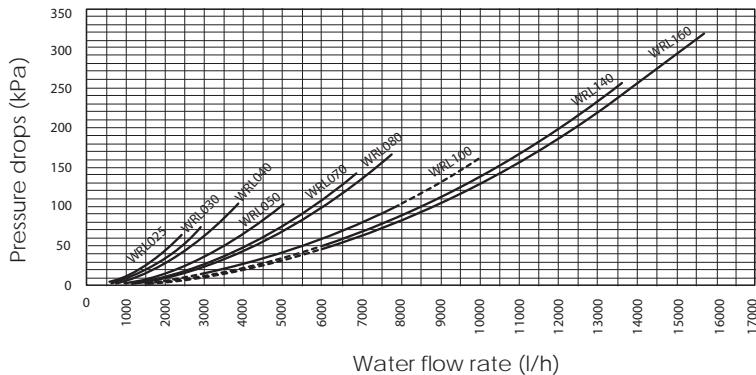

### FUNCTIONING IN HEATING MODE

#### CONDENSER

### COOLING MODE FUNCTIONING

#### EVAPORATOR

The tables state the correction to apply to the pressure drops on variation of the average temperature.

The minimum flow rates have been calculated with reference to the features of the water flow rate control device (differential pressure switch).

**- - - = "field of application not accepted with standard pump". CONTACT THE HEAD OFFICE.**

### PRESSURE DROP 2-WAY MODULATING VALVE

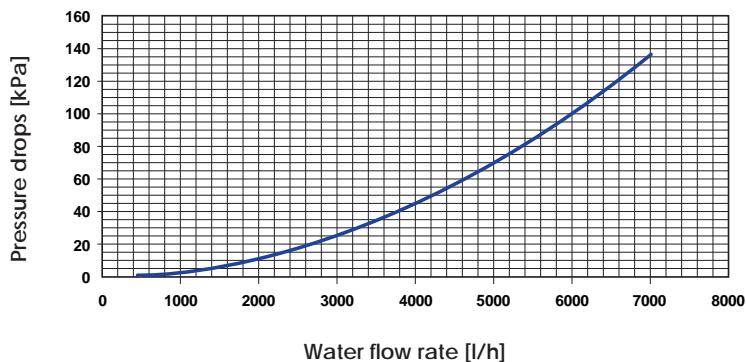

#### ATTENTION:

In case of power failure the valve remains locked in the working position. In order to avoid unnecessary water consumption, it is recommended to install, upstream of the water mains supply, a shut-off device.

#### ATTENTION:

Max. differential pressure 4 bar

#### PRESSURE DROP 2-WAY MODULATING VALVE

Water flow rate	l/h	500	1000	2000	3000	4000	5000	6000	7000

## 11. ETHYLENE GLYCOL SOLUTIONS

- The corrective factors of cooling capacity and input power take into account the presence of glycol and the difference in evaporation temperatures.
- The pressure drop correction factor considers the different flow rate resulting from the application of the water flow rate correction factor.
- The water flow rate correction factor is calculated to keep the same  $\Delta t$  that would be present with the absence of glycol.

**NOTE**

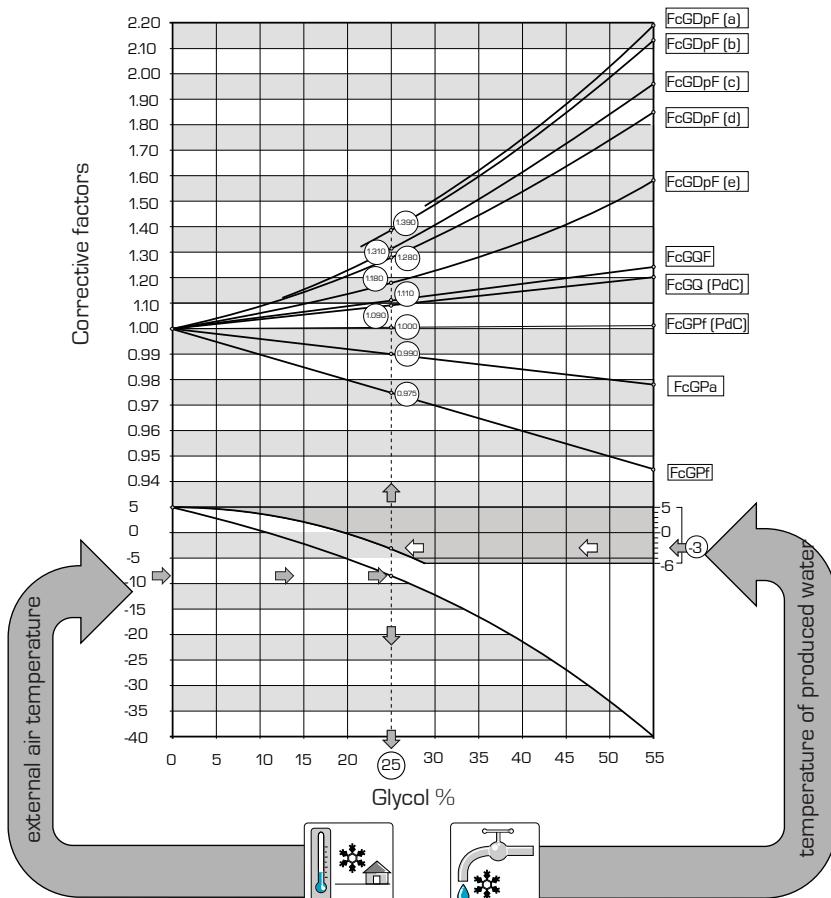

On the following page an example is given to help graph reading.

to determine the percentage of glycol required, see diagram below; this percentage calculation can take into consideration one of the following factors: Depending on which fluid is considered (water or air), the graph is interpreted by the right or left side at the crossing point on the curves with the external temperature line or the water produced line. A point from which the vertical line will pass is obtained and this will distinguish both glycol percentage and relative correction coefficients.

### 10.13. HOW TO INTERPRET GLYCOL CURVES

The curves shown in the diagram summarise a significant number of data, each of which is represented by a specific curve. In order to use these curves correctly it is first necessary to make some initial reflections.

- If you wish to calculate the percentage of glycol on the basis of the external air temperature, enter from the left axis and on reaching the curve draw a vertical line, which in turn will intercept all the other curves; the points obtained from the upper curves represent the coefficients for the correction of the cooling capacity and input power, the flow rates and the pressure drops (remember that these coefficients must be multiplied by the nominal value of the size in question); while the glycol percentage value recommended to produce desired water temperature is on the lower axis.
- If you wish to calculate the percentage of glycol on the basis of the temperature of the water produced, enter from the right axis and on reaching the curve draw a vertical line, which in turn will

**KEY:**

Pc	Corrective factors for cooling capacity
Pe	Corrective factors of the input power
Ph	Corrective factor for heating capacity
$\Delta P$ [1]	Corrective factor for pressure drops with an average fluid temp. = -3.5 °C
$\Delta P$ [2]	Corrective factor for pressure drops with an average fluid temp. = 0.5 °C
$\Delta P$ [3]	Corrective factor for pressure drops with an average fluid temp. = 5.5 °C
$\Delta P$ [4]	Corrective factor for pressure drops with an average fluid temp. = 9.5 °C
$\Delta P$ [5]	Corrective factor for pressure drops with an average fluid temp. = 47.5 °C
Qw [1]	Corrective factor for pressure drops (evap) with an average fluid temp. = 9.5 °C
Qw [2]	Corrective factor of flow rates (condenser) with an average fluid temp. = 47.5 °C

**NOTE**

**Although the graph shows a max external air temperature of -40°C, the unit operational limits must be complied with.**

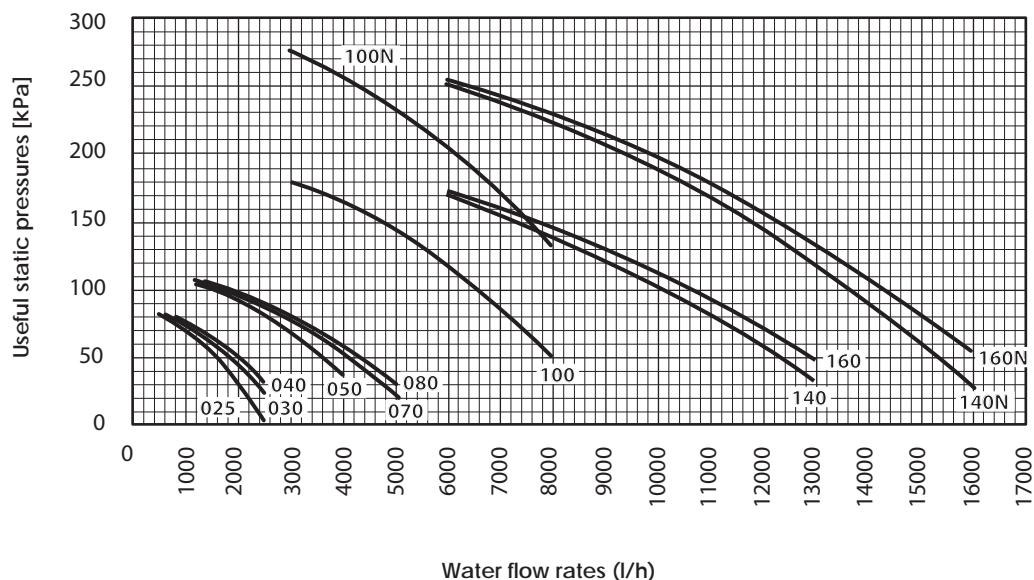

Intercept all the other curves; the points obtained from the upper curves represent the coefficients for the correction of the cooling capacity and input power, the flow rates and the pressure drops (remember that these coefficients must be multiplied by the nominal value of the size in question); while the lower axis recommends the glycol percentage value necessary to produce water at the desired temperature.

Initial rates for "EXTERNAL AIR TEMPERATURE" and "TEMPERATURE OF PRODUCED WATER", are not directly related, therefore it is not possible to refer to the curve of one of these rates to obtain corresponding point on the curve of the other rate.

curves range, contact the  
head office.

## 13. EXPANSION VESSEL CALIBRATION

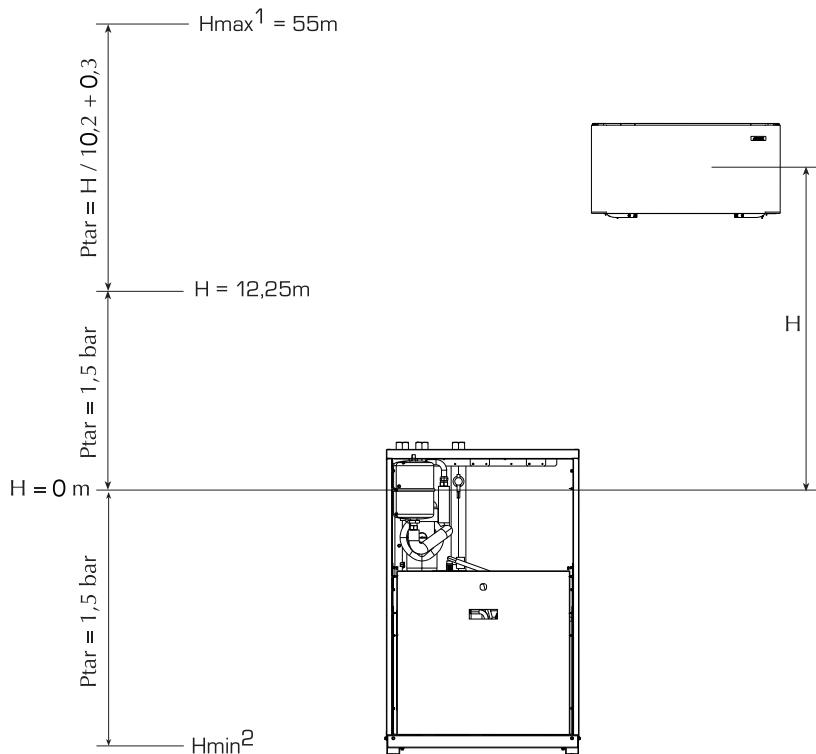

The standard pressure pre-load value of the expansion vessel is 1.5 bar, maximum value is 6 bar.

The calibration of the vessel must be regulated in accordance with the maximum level difference ( $H$ ) of the user (see diagram) using the following formula:

$$p(\text{calibration}) [\text{bar}] = H [\text{m}] / 10.2 + 0.3.$$

For example: if level difference  $H$  is equal to 20 m, the calibration value of the vessel will be 2.3 bar.

If the calibration value obtained from the formula is less than 1.5 bar (i.e. for  $H < 12.25$ ), use the standard calibration.

### KEY

- (1) Check that highest installation is not higher than 55 metres.

- (2) Ensure that lowest installation can withstand global pressure in that position.

Reference operational conditions:

- (1) Cooling: Max water temp. = 40 °C, min water temp. = 4 °C.
- (2) Heating (heat pump): Max water temp. = 60 °C, Min water temp. = 4 °C.

## 14. SOUND DATA

WRL-H	Total sound levels			Octave band [Hz]						
	Power dB(A) [2] LW	Pressure 1m dB(A) [3] LP	Pressure 10m dB(A) [4] LP	125	250	500	1000	2000	4000	8000

## 16. SELECTION AND PLACE OF INSTALLATION

The WRL-H heat pump is set-up for an *INTERNAL* application.

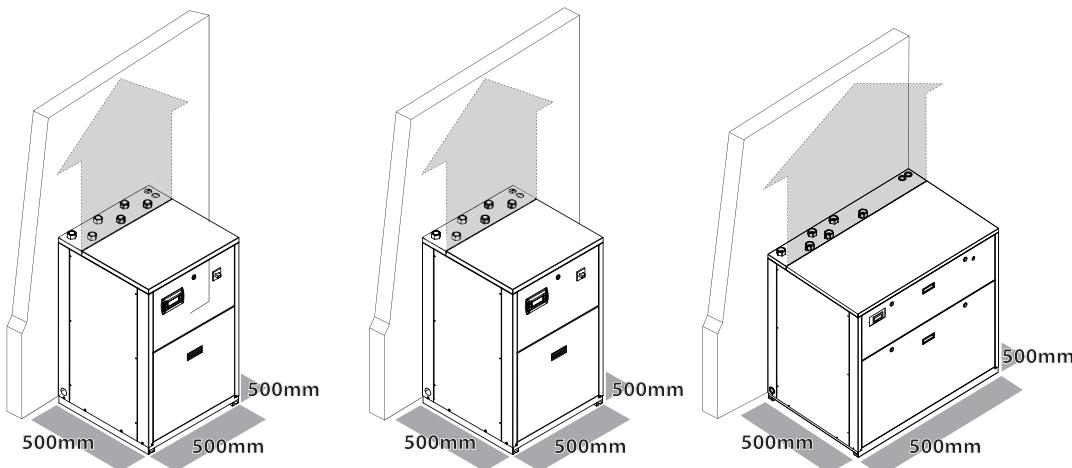

It is shipped pre-tested and only requires the electrical and hydraulic connections. Before beginning the installation process, decide with the client where the unit is to be installed, whilst paying attention to the following:

- The support surface must be capable of supporting the unit weight.
- The safety distances between the units and other appliances or structures must be scrupulously respected.
- The unit must be installed by a qualified technician in compliance

with national laws in the country of destination.

- It is mandatory to foresee to the necessary technical space in order to allow ROUTINE AND EXTRAORDINARY MAINTENANCE interventions.
- Remember that during operation, the chiller can cause vibrations; therefore "VT" anti-vibration mounts (ACCESSORIES) are recommended, fixed on the base according to the assembly layout.
- Fix the unit checking that it is level.

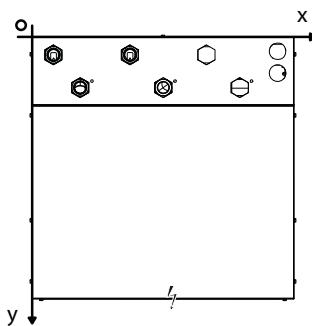

### ► MINIMUM TECHNICAL SPACES

#### WARNING

It is obligatory to comply with the indicated minimum measurements; the height and the back must be sized according to the type of system and place of installation.

### 16.1. ► BARYCENTRES

## 17. ANTI-LEGIONELLA FUNCTION

The **ANTI-LEGIONELLA** function is designed to eliminate legionella germs that can reside in the DHW tanks. *This function is only available if the electric resistance or an integration system inside the sanitary storage tank is enabled.*

Once this procedure is activated, the

DHW reaches a maximum of 65°C for at least 5 minutes and a maximum of 120 minutes, every Sunday at 3.00 a.m. (EDITABLE PARAMETERS).

Remember that the specific parameters are found beneath the SANITARY WATER menu (assistance).

**ATTENTION:**  
Changing parameters that are identified by this symbol could cause unit malfunctioning.

**THESE SETTINGS CAN ONLY BE EDITED BY AUTHORISED PERSONNEL.**

A weekly programme can be activated from the user panel and if the set-point is increased it prevents legionella-related

problems from arising through the domestic water integration outlet.

ON the user panel:

- press the PRG key and the menu will appear;
- select the SANITARY icon;
- press ENTER;
- select the ANTI-LEGIONELLA D18 icon.

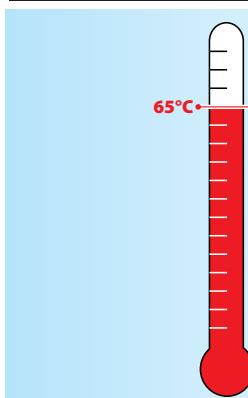

Anti-legionella treatment								
Mask Index	Display description	Description	Default	UOM	min.	Max	RW

DHW menu (assistance) - To set anti-legionella cycle

Unit display	Index	Display/Parameter
	A	<b>Domestic hot water:</b> this menu allows the parameters linked to DHW production management to be set at after-sales service level.
	B	<b>End set-point:</b> this parameter indicates the temperature to be used to perform the anti-legionella cycle; remember this temperature is maintained for a minimum time set in the subsequent parameter.
	C	<b>Minimum time:</b> this parameter indicates the minimum time for which the DHW temperature must exceed the end set point for the anti-legionella cycle to be considered complete.
	D	<b>Maximum time:</b> this parameter indicates the maximum duration of the anti-legionella cycle and the "anti-legionella cycle not completed" alarm will be triggered once this time elapses (alarm code AL45).

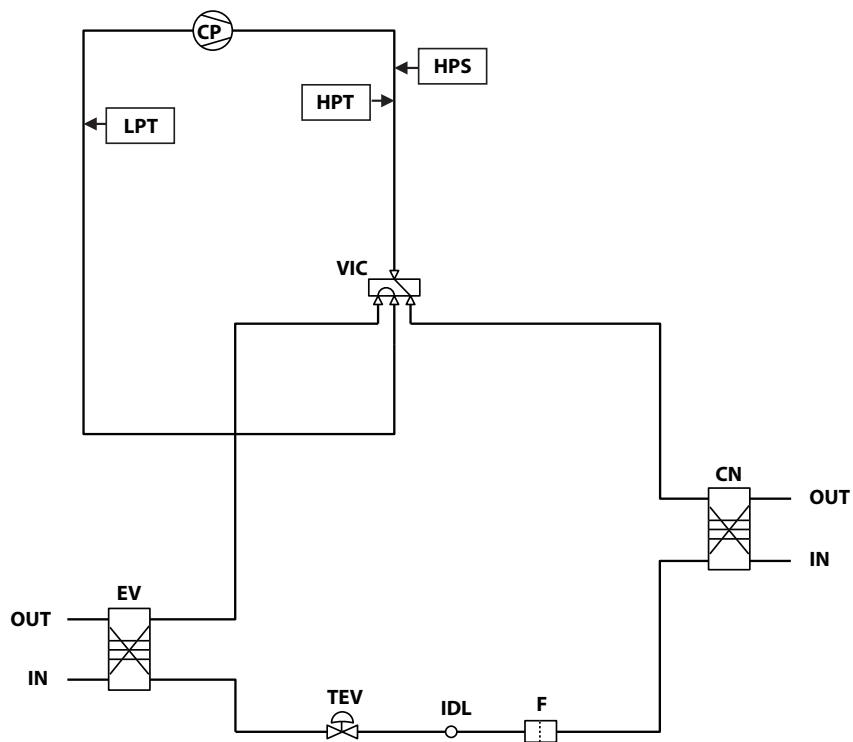

N.B. This function is also active with the unit in STAND-BY.

Set Point: 65 °C DHW temperature.  
T min.: 5m (default)  
T max: 120m

## 18. MAIN COOLING LAYOUT

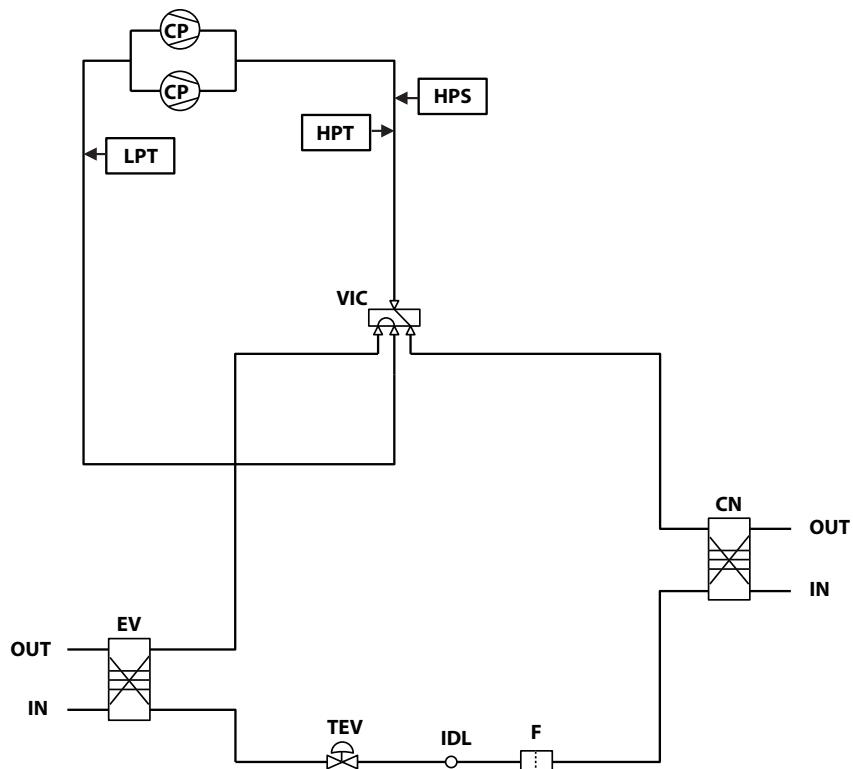

### 18.1. WRL-H STANDARD 025 / 080

#### KEY

CN	Condenser
CP	Compressor
EV	Evaporator
F	Dehydrator filter
HPS	High pressure switch
HPT	High pressure transducer
IDL	Indicator for liquid passage
LPT	Low pressure transducer
TEV	Electronic thermostatic valve
VIC	Cycle reversing valve

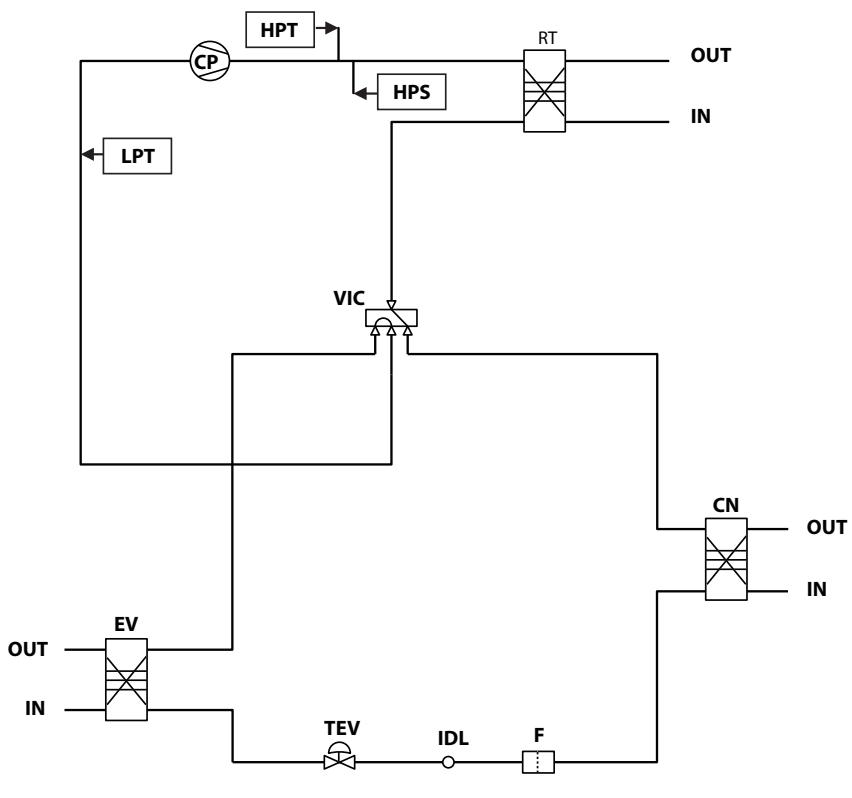

### 18.2. WRL-H STANDARD 100 / 160

#### KEY

CN	Condenser
CP	Compressor
EV	Evaporator
F	Dehydrator filter
HPS	High pressure switch
HPT	High pressure transducer
IDL	Indicator for liquid passage
LPT	Low pressure transducer
TEV	Electronic thermostatic valve
VIC	Cycle reversing valve

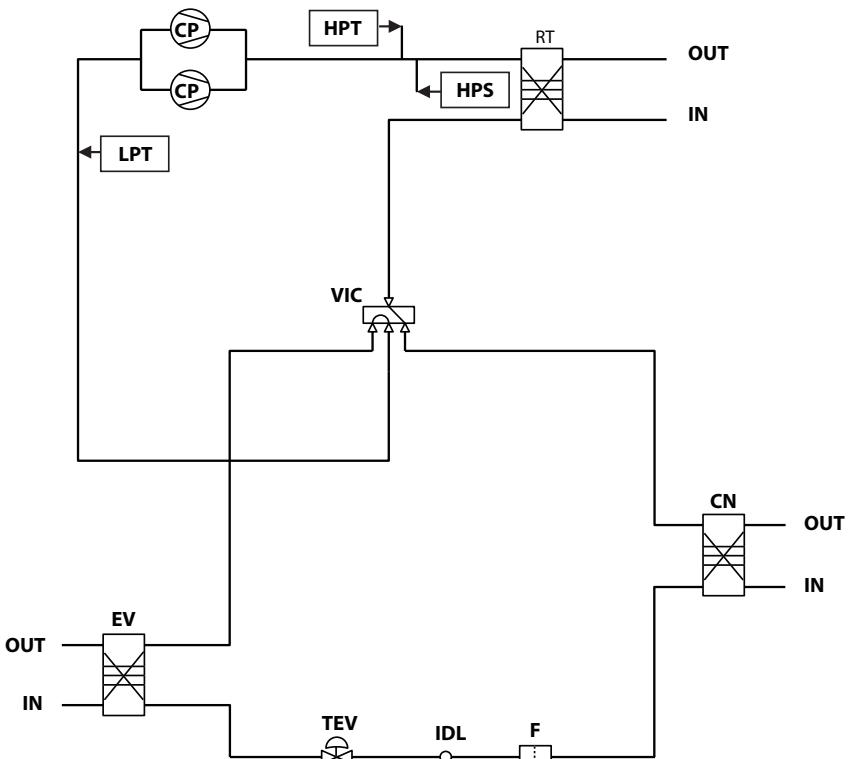

18.3. WRL-HT 025 / 080

KEY

CN	Condenser
CP	Compressor
EV	Evaporator
F	Dehydrator filter
HPS	High pressure switch
HPT	High pressure transducer
IDL	Indicator for liquid passage
LPT	Low pressure transducer
RT	Total recovery (optional version)
TEV	Electronic thermostatic valve
VIC	Cycle reversing valve

18.4. WRL-HT 100 / 160

KEY

CN	Condenser
CP	Compressor
EV	Evaporator
F	Dehydrator filter
HPS	High pressure switch
HPT	High pressure transducer
IDL	Indicator for liquid passage
LPT	Low pressure transducer
RT	Total recovery (optional version)
TEV	Electronic thermostatic valve
VIC	Cycle reversing valve
