**Note :** Installation and maintenance are to be performed only by qualified personnel who are familiar with local codes and regulations, and experienced with this type of equipment.

**Caution :** Sharp edges and coil surfaces are a potential injury hazard. Avoid contact with them.

**Warning :** Moving machinery and electrical power hazard. May cause severe personnel injury or death. Disconnect and lock off power before servicing equipment.

# Nomenclature

## Product Line-up

### M5RT-BR Series

#### Heat pump

Heat pump	Model	Heating	Nomenclature	Classification										
				Rooftop controller	PCB	EXV	Gold Fin (NA549)	Scroll compressor	Saranet Air Filter	Side flow	Convertible	Filter Drier	High pressure switch	Low pressure switch
M5RT	90BR	FXAA	X	X	X	X	X	X	X	X	X	X	X	X
	120BR	FXAA	X	X	X	X	X	X	X	X	X	X	X	X
	150BR	FXAA	X	X	X	X	X	X	X	X	X	X	X	X
	180BR	FXAA	X	X	X	X	X	X	X	X	X	X	X	X

Remarks: Economizers & CO2 sensor will be ready soon.

# Features

- **Package Unit:**

McQuay's new range of rooftop packaged units has been developed specifically to suit commercial applications and are designed to be easy to install, requiring only ducting (and associated fittings), power/ control wiring and drain piping. Along with the light grey colour, the flat top and compact design gives an aesthetic and neat appearance when installed in line of sight. The unit cabinet is made of powder coated sheet metal especially suitable for outdoor use. All parts of the structure are fastened with corrosion resistant screws and bolts.

- **Base Beam:**

The base beams are fixed and provide a rigid foundation for the entire unit. The beam has the forklift slots and rigging holes for better handling purpose. It is also designed to allow mounting on a roof curb, the dimension of the roof curb should be followed strictly in accordance with the installation manual.

- **Flexible Air Supply:**

Since all the units utilize a belt/ pulley driven supply air fan, the units are able to meet a wide range of supply air volumes and external static pressures. Furthermore, the supply air fan motors, pulleys and belts (field supplied) can be easily changed on site to meet exact air flow and ESP requirement if required.

- **Convertible Return and Supply Air:**

Unit can be easily converted from horizontal to vertical (downward) supply and return air duct configuration by relocating the panels and supply air fan mounting.

- **Scroll Compressor:**

Units are equipped with high efficiency and reliable scroll compressors. Each compressor is mounted on rubber vibration isolators in order to reduce the noise level and vibration transmissions.

- **Powder Coated Condensate Drain Pan:**

The sheet metal condensate drain pan is powder coated to resist corrosion.

- **Slots for 2 inches Return Air Filters:**

A 2 inches rail is provided as standard in instances where a field supplied filter casement need to be installed.

- **Higher Energy Efficiency Rating:**

The M5RT-BR series is designed in line with market requirement for better energy saving. Its' performance is claimed to be among the best in the market.

## Technical Specification

- **Compressor**

Compressor used in M5RT-BR series Packaged Units are hermetically sealed scroll type. All the compressors are provided with an internal overload protection.

- **Condenser**

Condenser coils are manufactured from seamless inner grooved copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig.

ALL standard coils are up to 3 rows / 14-16 FPI, 3/8" (9.52mm) O.D. tubes.

Hydrophilic Gold Fin coating (NA549) is offered as standard, which has longer life span under corrosive environment.

- **Evaporator**

Evaporator coils are manufactured from seamless inner grooved copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig.

ALL standard coils are 3-4 rows / 14-16 FPI, 3/8" (9.52mm) O.D. tubes.

Hydrophilic Gold Fin coating (NA549) is offered as standard, which has longer life span under corrosive environment.

- **Condenser Fan and Motor**

Fans are of propeller type, direct driven by weatherproof electrical induction motors. Condenser fan motor has class F insulation and splash-proof enclosure, IP44.

- **Evaporator Fan and Drive**

Blower is DWDI centrifugal, forward curved type. It is mechanically and dynamically balanced and being mounted on a rigid shaft in a self aligned bearing block.

The motor is fitted with an adjustable V-belt drive, as standard. It has class B insulation and dripping water proof, IP22.

- **Refrigerant Circuit**

Each refrigerant circuit shall have independent electronic expansion devices, HP/LP switch and refrigerant line service pressure ports as standard factory installed.

- **Expansion Device**

Electronic Expansion Valve is being used to ensure accurate control of refrigerant flow.

- **Casing/Structure**

The unit casing used in M5RT-BR series is made of zinc coated galvanized steel sheets. It is further coated with an electrostatic powder coat and then oven-baked for a tough and lasting weather resistant finish. Zinc plated screws are used throughout to further reduce possibility of unit rusting.

- **Insulation**

ALL possible areas of condensation to happen are insulated by PE, Polyethelene. Panel insulation is 10mm thickness while drain pan insulation is 5mm thickness.

- **Control**

Units shall be completely factory supplied with an integrated controlled Module, with built in resident control algorithms to make decide heating, cooling, or ventilating operations in response to electronic signals from indoor & outdoor temperature sensors.

- **Rooftop Panel - handset**

Rooftop Panel comprises all starting, operating and safety controls setting. It is connected to the IC module PCB and supplied as standard.

## Optional Features

- **3rd Party Thermostat**

For application that requires uniform thermostat outlook with other electrical appliances. 3rd Party thermostat can be connected to the factory supplied module via the contact point available on PCB board.

- **Basic BMS Connection**

Unit's standard PCB board provides dry contact for basic BMS connection. Input signal will go to dry contact ON/OFF, COOL/HEAT, and 4 to 20 mA temperature adjuster while output signal will come from ON/OFF, COOL/HEAT, ALARM and DEFROST dry contact.

- **Economizer (in progress of development)**

Field installed economizer is supplied from factory as an accessory. It is also designed to cater for horizontal or vertical down throw air discharge orientation.

- **CO<sub>2</sub> Sensor**

Field specified CO<sub>2</sub> sensor can be easily plug on the control board's dry contact, which is come as standard.

- **Auxiliary Heater**

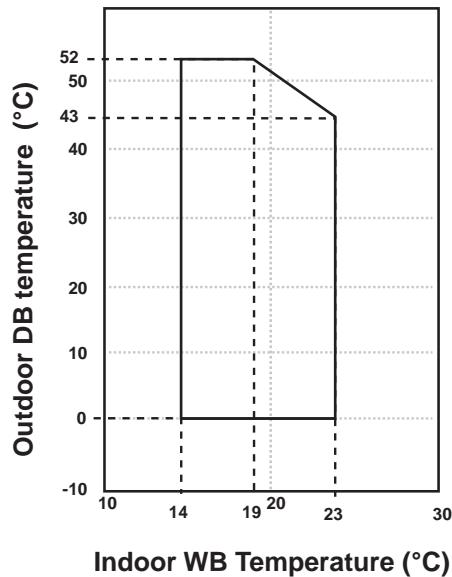

Auxiliary heater connection point is available on the standard PCB for field supplied heater connection.

# Application Information

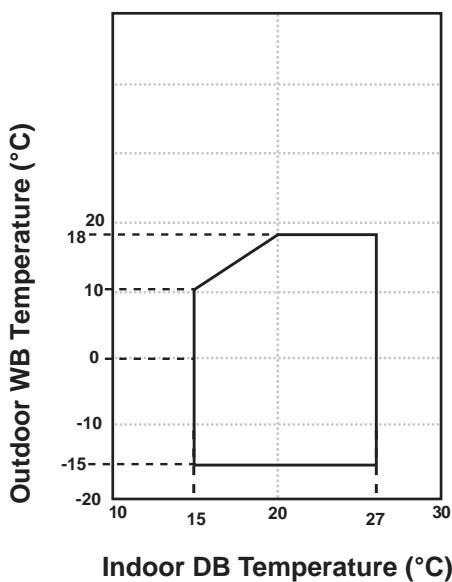

## Operating Range

Ensure the operating temperature is in allowable range.

## Cooling

## Heating

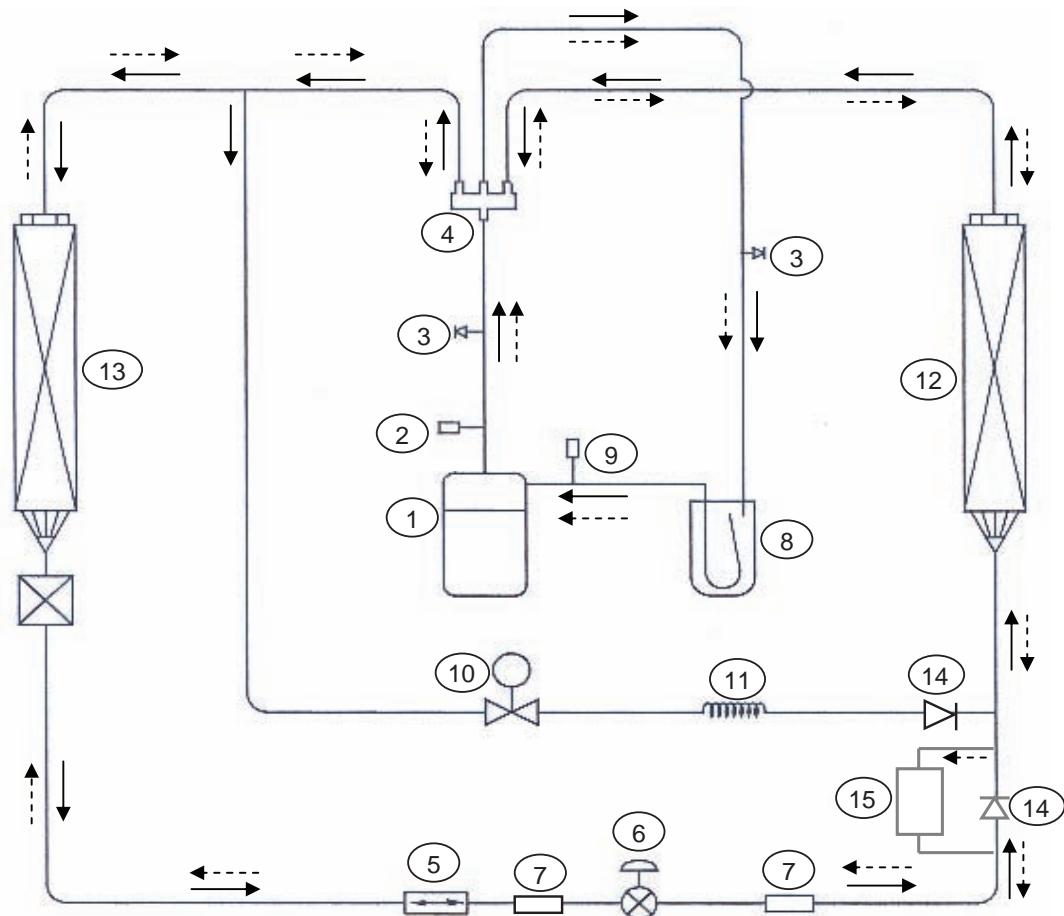

## Caution :

The use of your air conditioner outside the range of working temperature and humidity can result in serious failure.

## Refrigerant Circuit Diagrams

Model: M5RT90/120/150/180BR

Item	Part's Model/Part No/Size
1	Compressor
2	Pressure Switch 600PSI N/C
3	Access Valve
4	4WV
5	Filter Drier
6	EXV
7	Strainer
8	Accumulator
9	Pressure Switch 18PSI N/C
10	Solenoid Valve
11	Bypass Capillary Tube
12	ID Coil
13	OD Coil
14	Check Valve
15	Compensator

←	Heating Operation

Note: (a) 120, 150, 180 consists of 2 circuits in the system.

(b) Item 15 is applicable for 120 only

## Controllers

### A. Operating Guide

- Upon power up of the unit, the LCD displays the main display screen

\* 2000/01/01 [Sat] 12:00am  
**Status** : OFF  
**Mode** : Heating  
**Set Temp** : 24°C  
▼

- Press the ON/OFF button for 1 second to switch on the unit if the status shows OFF. The status will change to ON. The ON/OFF LED will light up.
- Press the COOL button for 1 second if cooling is required or the HEAT button if heating is required.
- The 'Set Temp' refers to temperature setting.
- Press the ▼ button once to view the compressor(s) on, off or defrost status.

\* 2000/01/01 [Sat] 12:00am  
**Compressor 1** : ON  
**Compressor 2** : DEFROST  
▼

- Press the ▼ button again to view the temperature for room and outdoor ambient.

\* 2000/01/01 [Sat] 12:00am  
**Return Air** : 24.0°C  
**Outdoor Air** : 24.0°C  
▼

- Press the ▼ button again to view the selected type for unit, number of compressor used, indoor fan 'always on' option, model and EEPROM version.

\* 2000/01/01 [Sat] 12:00am  
**Type** : H/Pump  
**No. Comp** : 2 Comp  
**IDF Opt** : --  
**Model** : 5RT90BR\_E  
**EP.Rev** : 0.0

- Press the ▲ button to return to previous screen(s) or ESC to return to main screen.
- Press the ALARM button to view or clear the alarm history. If alarm occurs, contact your dealer or serviceman.

\* Note: Display diagram is for illustration purpose only. It may differ for different models.  
The display information shall be subjected to the setting in the main controller board.

## B. Main Menu

1. Changes can be made to the factory setting parameter. This is done in the Main Menu. Press ENTER button to go into the Main Menu.
2. The Main Menu consists of Operation Menu, Settings Menu, Timer Menu, Alarm Menu, Warning Menu and Display Menu.

### How to use the Main Menu?

#### Step 1

Press ENTER to view the sub-Menu under Main Menu.

#### Step 2

Go to sub-Menu by pressing the ▲ or ▼ button. Press ENTER to select the sub-Menu.

#### Step 3

Go to parameter to change or view by pressing the ▲ or ▼ button. Press ENTER to select this parameter.

#### Step 4

Change the parameter by pressing the ▲ or ▼ button. Once completed press ENTER. Press ESC to go back to previous screen until you see the initial display screen.

### Operation Menu

This menu is to set the unit status (on or off), set the unit operation mode, change the temperature setting, and manually defrost the unit (applicable for heating mode only).

### Settings Menu

This menu is to set the parameters for unit operation (requires password entering), user setting, change password, set panel option and unlock panel. The panel option enables us to set the LCD backlight and contrast, set the alarm buzzer, enable and disable the screen saver and set a screen saver timeout and set the temperature display in °C or °F.

**Note:** The Set Parameter in the setting menu requires password for any changes to or to view its parameter.

### CAUTION:

All the password entering must be done by local dealer/serviceman. User is not allowed to change the value of the set parameter as this may cause damage to unit or deter its operation.

### Timer Menu

This menu is to set the clock, set the date, set a 7 days schedule to start and stop the unit and enable or disable the set schedule.

### Alarm Menu

This menu is to view the alarm history and also clear the record. The panel can keep up to 20 fault / alarm records.

### Warning Menu

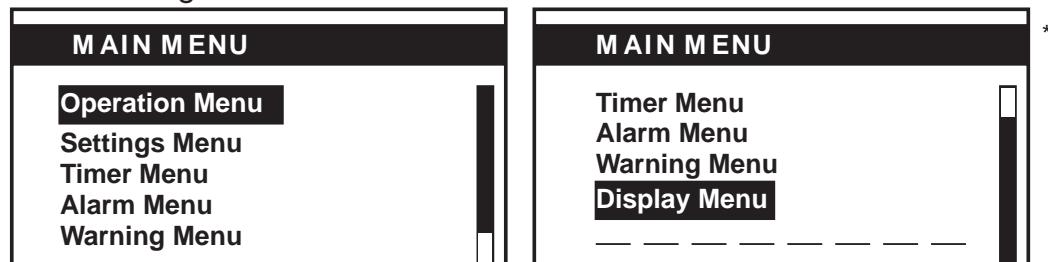

This menu is to view the warning history and also to clear the record. The panel can keep up to 20 warning records.

### Display Menu

This menu is to view the indoor heat exchanger sensor(s) temperature, outdoor heat exchanger sensor(s) temperature, discharge sensor(s) temperature, solenoid valve(s) operation status, compressor(s) run time record, EXV opening pulse, economizer operation status (applicable for unit with economizer only), filter checking time, control type and software version. Some of the submenu may require password for entering.

## Main Menu

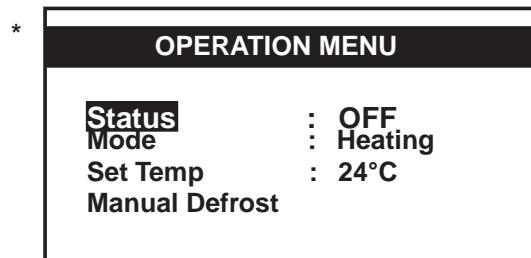

Press ENTER to go to this menu.

There are 6 sub menus in [Main Menu]. Press ▲ or ▼ to select sub menus, ENTER to enter into the sub menu or press ESC to exit to main display screen.

### Operation Menu

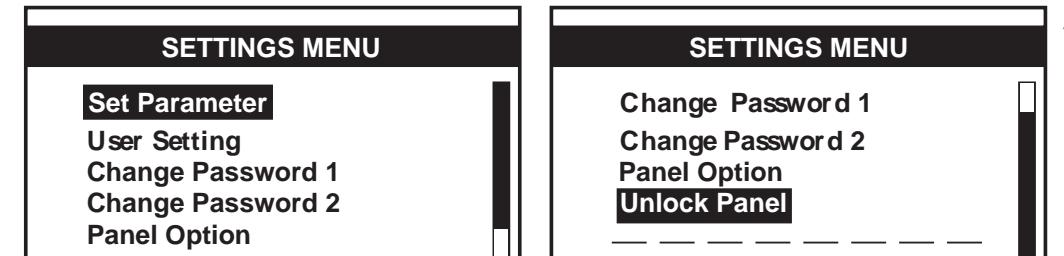

Select [Operation Menu] in [Main Menu] and press ENTER to go into this menu.

Some basic settings can be done here. Press ▲ or ▼ to select the required setting. Then, press ENTER to enter the setting mode. Press ▲ or ▼ to toggle the setting. Press ENTER again to confirm the setting. Press ESC to exit to [Main Menu].

### Settings Menu

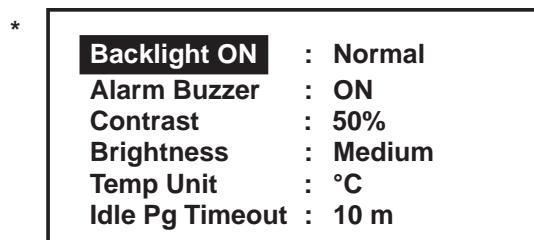

Select [Settings Menu] in [Main Menu] and press ENTER to go into this menu.

Some advance settings can be found here. Press ▲ or ▼ to select the required setting. Then, press ENTER to enter the setting mode. Press ▲ or ▼ to toggle the setting. Press ENTER again to confirm the setting. Press ESC to exit to [Main Menu].

### Panel Option

Select [Panel Option] in [Settings Menu] and press ENTER to go into this menu.

Press ▲ or ▼ to select the required setting, ENTER to enter into the setting.

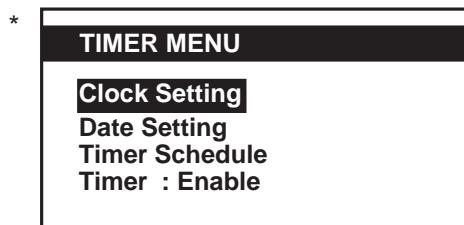

Press ▲ or ▼ to select the required option, ENTER to select the option.

Press ESC to exit to [Settings Menu].

\* Note: Display diagram is for illustration purpose only. It may differ for different models.  
The display information shall be subjected to the setting in the main controller board.

## Timer Menu

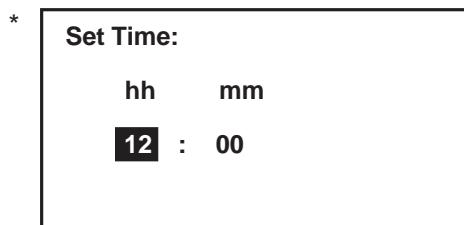

Select [Timer Menu] in [Main Menu] and press ENTER to go into this menu.

All the timer/schedule settings are included in this menu. Press ▲ or ▼ to select the required setting. Then, press ENTER to enter the setting mode. Press ▲ or ▼ to toggle the setting. Press ENTER or → to toggle the setting. Press ENTER again to confirm the setting. Press ESC to exit to [Main Menu].

### Clock Setting

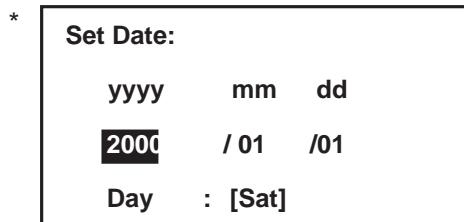

Select [Clock Setting] in [Timer Menu] and press ENTER to go into this menu.

Press ▲ or ▼ to select the required option. Then, press ENTER to enter the setting mode. Press ▲ or ▼ to toggle the setting. Press ENTER again to confirm the setting. Press ESC to exit to [Timer Menu].

### Date Setting

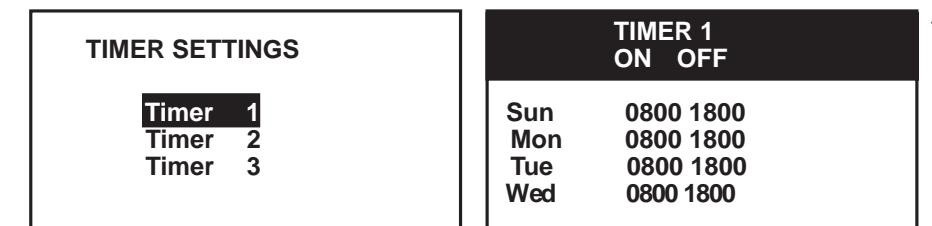

Select [Date Setting] in [Timer Menu] and press ENTER to go into this menu.

Press ▲ or ▼ to select the required option, ENTER to select the option.  
Press ESC to exit to [Timer Menu].

### Timer Schedule

Select [Timer Schedule] in [Timer Menu] and press ENTER to go into this menu.

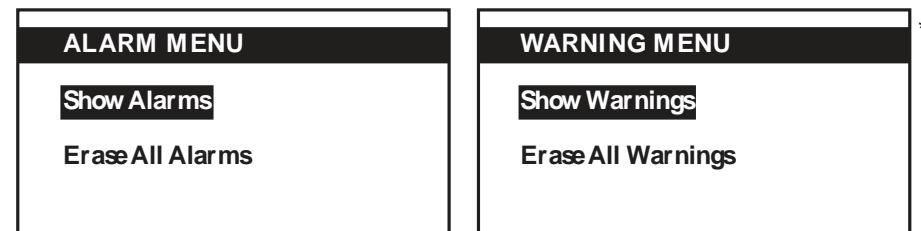

This is the 7 days programmable timer schedule menu. There are 3 ON/OFF events in one day. User can choose to set each day (Sunday - Saturday) ON/OFF timer. To have the schedule in operation, user needs to set the [Timer] in [Timer Menu] to enable. Press ESC to exit to [Timer Menu].

\* Note: Display diagram is for illustration purpose only. It may differ for different models.

The display information shall be subjected to the setting in the main controller board.

## Alarm Menu/Warning Menu

Select [Alarm Menu]/[Warning Menu] in [Main Menu] and press ENTER to go to this menu.

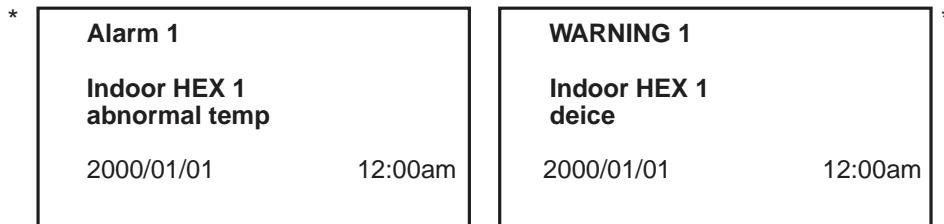

This place keeps records for all previous system faults/alarms/warnings.

User can view or clear these records. The panel can keep up to 20 faults/alarm warning records.

Press ESC to exit to [Main Menu].

### Show Alarms/Show Warnings

Select [Show Alarms]/[Show Warnings] in [Main Menu] and press ENTER to go to this menu.

The record shows:

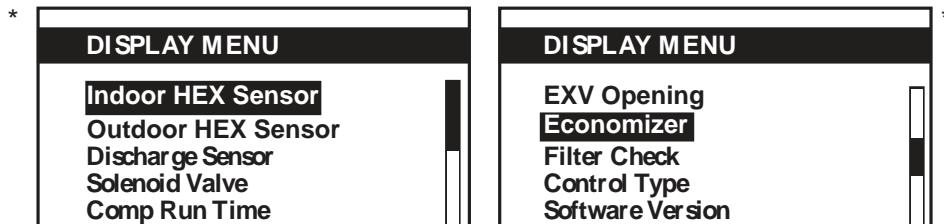

- Alarm/Warning description
- Alarm/Warning occurrence date
- Alarm/Warning occurrence time

Besides that, user can erase the alarm/warning record(s) in this menu (password is required).

Press ESC to exit to [Alarm Menu]/[Warning Menu].

## Display Menu

Select [Display Menu] in [Main Menu] and press ENTER to go to this menu.

This menu displays indoor heat exchanger sensor(s) temperature, outdoor heat exchanger sensor(s) temperature, discharge sensor(s) temperature, solenoid valve(s) operation status, compressor(s) run time record, EXV opening pulse, economizer operation status (applicable for unit with economizer only), filter checking time, control type and software version. Some of the submenu may require password for entering.

Besides that, user can clear the compressor run time record (password is required).

Press ESC to exit to [Main Menu].

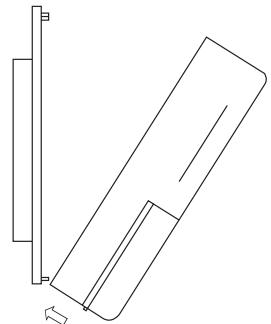

\* Note: Display diagram is for illustration purpose only. It may differ for different models.

The display information shall be subjected to the setting in the main controller board.

## C. Installation

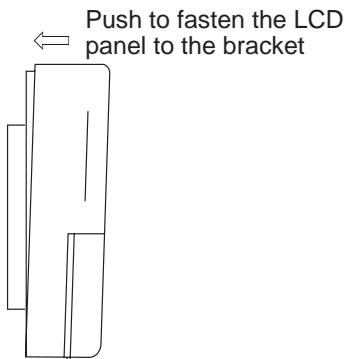

When installing the LCD panel to the bracket,

**Step 1**

Hook the LCD panel  
from the bottom first

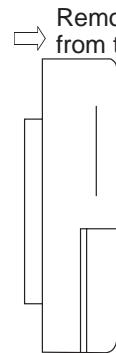

**Step 2**

Push to fasten the LCD  
panel to the bracket

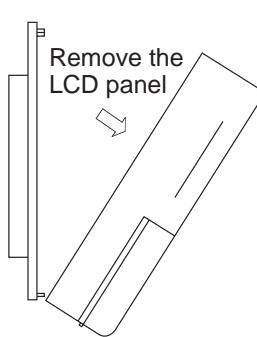

When removing the LCD panel from the bracket,

**Step 1**

Remove the LCD panel  
from the top part first

**Step 2**

Remove the  
LCD panel

1. A 3V DC battery is supplied with the LCD. It is used to ensure that the LCD displays real time once the timer is set.
2. The LCD is wired to the main board via CN8 connection.

## Installation

### (a) Location For Installation

Install the unit in a manner that prevents short cycling of condenser air back into the unit. (As in the case of short circuit of discharge air). Allow sufficient space for maintenance around the unit.

When two or more units are installed in a location, they must be positioned such that one unit will not be taking the discharge air from another unit.

Ensure that there is no obstruction of air flow into or out of the unit. Remove obstacles which block air intake or air discharge.

The location must be well ventilated, in a manner that prevents short cycling of condenser air back into the unit.

The unit is recommended to install in:-

A place capable of bearing the weight of the unit and isolating noise and vibration.

A place that has adequate drainage.

A place where the unit will not be buried in snow.

A place where air outlet port is not exposed to strong wind.

A place where the air discharge and operating sound level will not annoy the neighbours.

The location where it is not accessible by general public.

### (b) Duct Construction

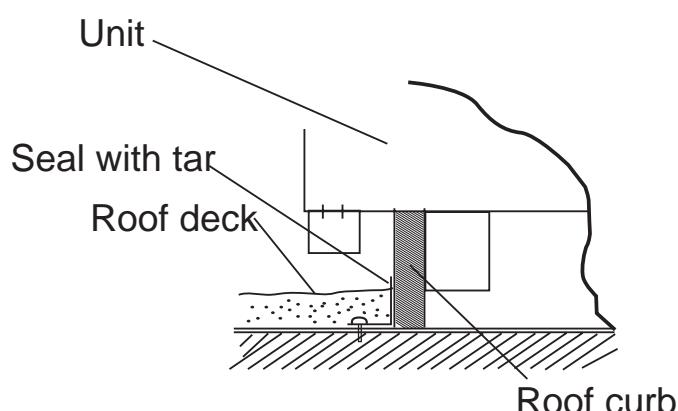

- These unit are equipped with supply and return air openings. Duct connection to the unit should be made with duct flanges and secured directly to the air openings with flexible duct connectors to avoid abnormal noise transmission.
- To prevent air leakage, all duct seams should be sealed.
- Ducts in the unconditioned space must be insulated.
- Ducts exposed to the outside must be weather proofed.
- Ducts that entering building through the roof, the entering should be sealed with weather stripping to prevent rain, sand, dust etc, from entering the building.
- Correct size of filter must be installed at the return air duct.

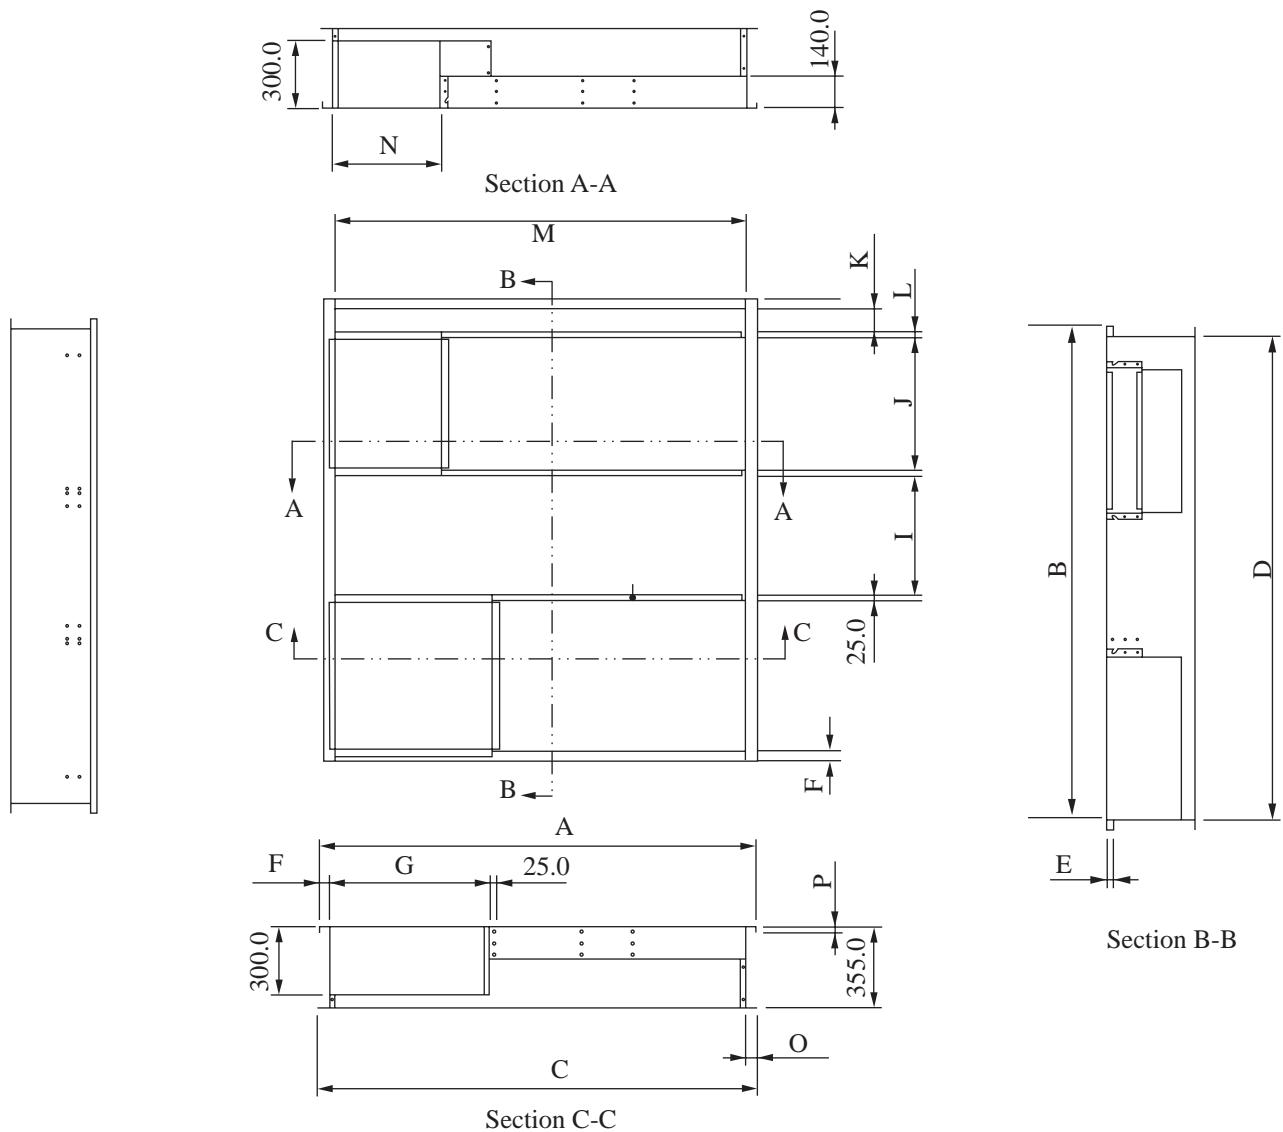

### (c) Unit Support (For down throw unit only)

1.The figure shows the use of the roof curb for mounting these units.

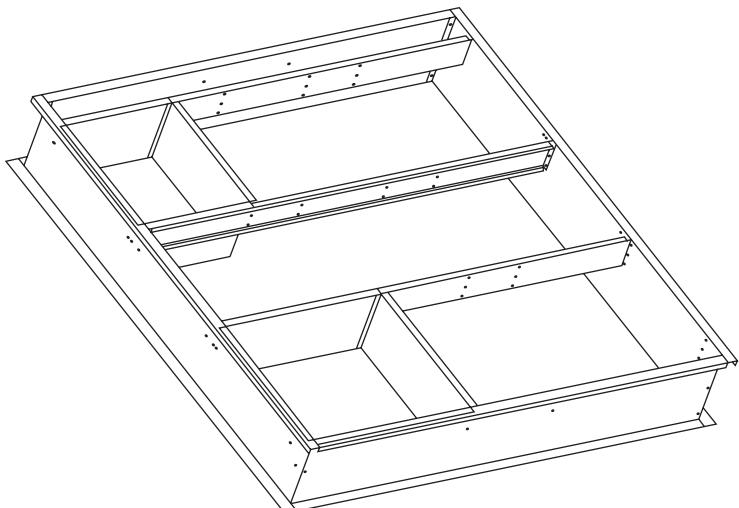

2.The curb should be sealed and fixed to the roof by weather stripping. A suggested means of sealing the unit and roof curb as shown in the right.

3.Recommended roof curb dimension is shown below.

Dimension Label	M5RT90BR	M5RT 120/150BR	M5RT180BR
<b>A</b>	1821.0	1890.0	2448.0
<b>B</b>	1505.5	2081.0	2081.0
<b>C</b>	1881.0	1908.0	2466.0
<b>D</b>	1468.5	1998.0	1998.0
<b>E</b>	15.0	25.0	25.0
<b>F</b>	20.0	43.0	46.0
<b>G</b>	838.2	698.7	827.0
<b>H</b>	538.1	676.0	676.0
<b>I</b>	272.4	538.9	444.6
<b>J</b>	605.1	599.8	645.8
<b>K</b>	0.0	104.6	104.6
<b>L</b>	0.0	25.0	25.0
<b>M</b>	1781.0	1804.0	2362.0
<b>N</b>	479.7	475.7	589.0
<b>O</b>	50.0	52.0	52.0
<b>P</b>	15.0	25.0	25.0

## (d) Unit Lifting

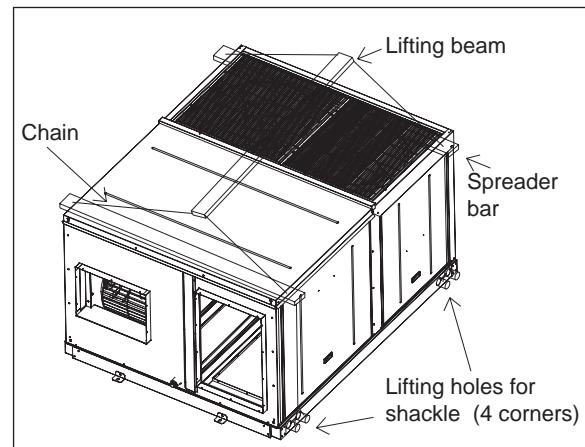

Holes at 4 corners of the unit base are used for unit lifting purpose.

The spreader bar shall be slightly wider than the unit width. The insulation should be added at 4 corners of the chain to prevent the damage of the panel when lifting.

Note:

Unit shown in diagram is M5RT90BR.

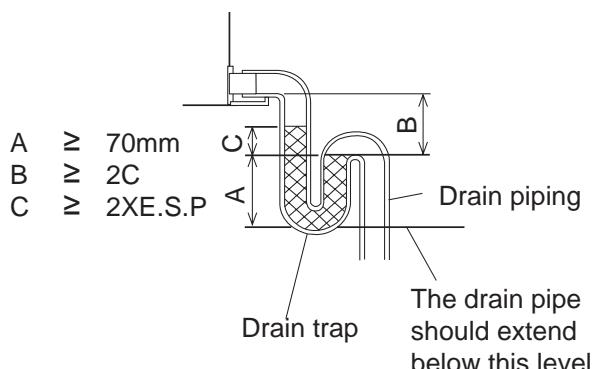

Other models will follow the same method in lifting.

## (e) Drain Piping

- A 1" MPT condensate drain fitting is provided. The drain pipe can be led out at the front side.
- The drain pipe must be provided with a trap on the outside of the unit and also installed at an incline for proper drainage, as shown in the right.
- To prevent condensate formation and leakage, provide the drain pipe with insulation to safeguard against sweating.
- Upon completion of piping work, check that there is no leakage and that the water drains off properly.

The drain piping should have a drain trap.

Note: E.S.P = External Static Pressure

Drain trap for condensate

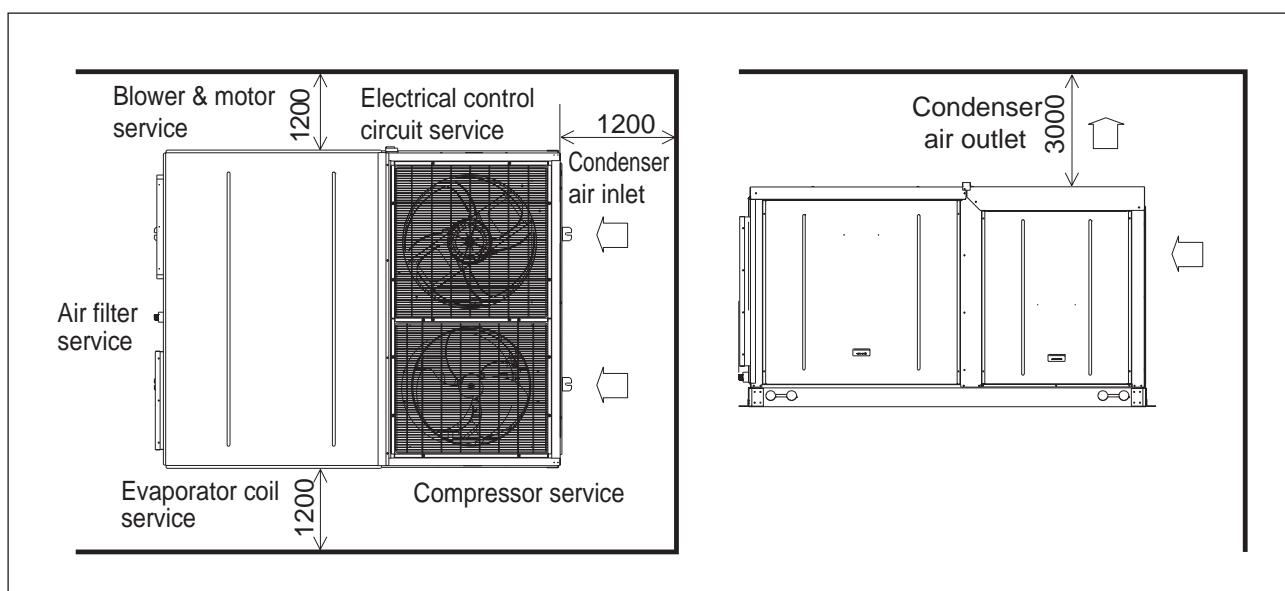

## (f) Installation Clearance

Refer diagram below for the space required around the unit. Note that:-

(a) All dimensions shown are in mm.

(b) All space value shown are minimum clearance required for the unit.

(c) Unit shown in the diagram is M5RT90BR. Other models shall follow the same clearance.

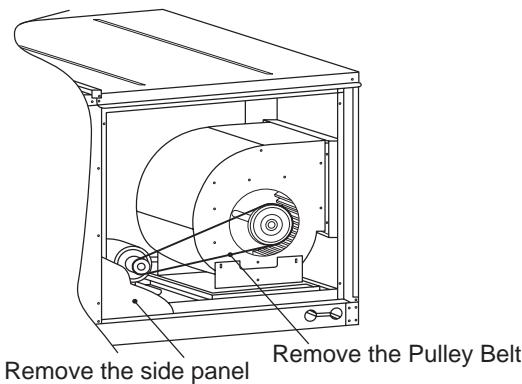

## (g) Unit Conversion

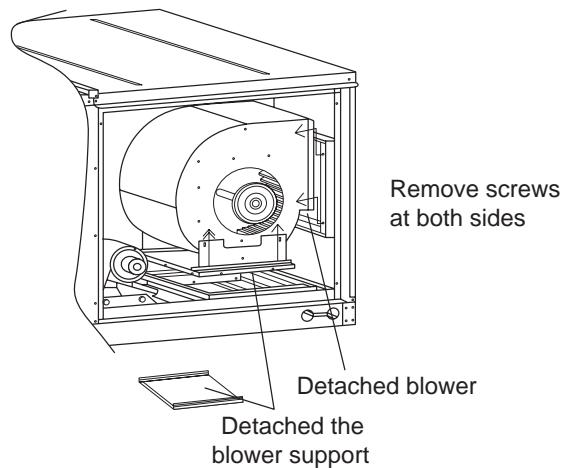

In the case of converting standard unit to downflow unit, follow the steps as stated below:

### M5RT 90,120, 150 & 180

**Step 1**

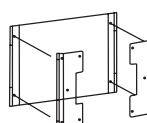

**Step 2**

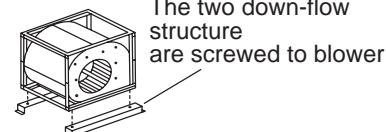

For M5RT90:

The two side plates are screwed on the blower support as shown

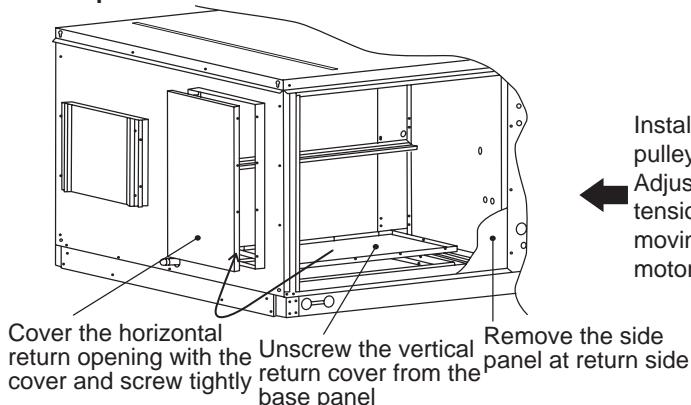

For M5RT120, 150 & 180:

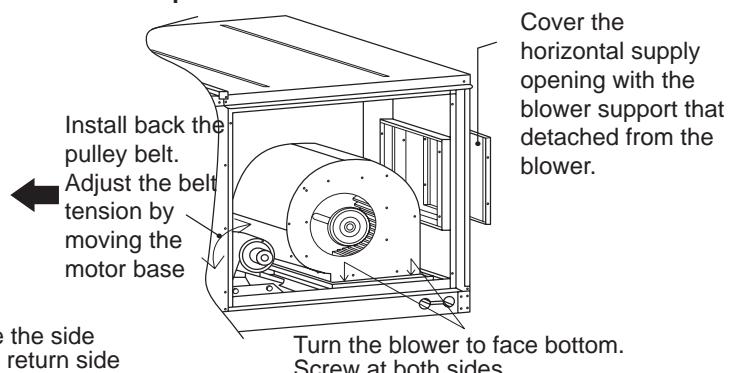

The two down-flow structure are screwed to blower

**Step 4**

**Step 3**

Lastly, install back the side panel

Install back the pulley belt. Adjust the belt tension. Lastly, install back the side panel

Note:

For down flow conversion, belt length will need to be changed.

For unit with standard pulley, belt length = a mm  
Shaft to shaft Distance for downflow, C-C = b mm

	<b>M5RT90</b>	<b>M5RT120</b>	<b>M5RT150</b>	<b>M5RT180</b>
<b>a</b>	1120	1180	1150	1362
<b>b</b>	380	410	380	460

## **Special Precautions When Dealing With Refrigerant R410A Unit**

### **(1) What is new refrigerant R410A?**

R410A is a new HFC refrigerant which does not damage the ozone layer. The working pressure of this new refrigerant is 1.6 times higher than conventional refrigerant (R22), thus proper installation / servicing is essential.

### **(2) Components**

Mixture weight composition R32(50%) and R125(50%)

### **(3) Characteristic**

- R410A liquid and vapor components have different compositions when the fluid evaporates or condenses. Hence, when leak occurs and only vapor leaks out, the composition of the refrigerant mixture left in the system will change and subsequently affect the system performance. DO NOT add new refrigerant to leaked system. It is recommended that the system should be evacuated thoroughly before recharging with R410A.
- When refrigerant R410A is used, the composition will differ depending on whether it is in gaseous or liquid phase. Hence when charging R410A, ensure that only liquid is being withdrawn from the cylinder or can. This is to make certain that only original composition of R410A is being charged into the system.
- POE oil is used as lubricant for R410A compressor, which is different from the mineral oil used for R22 compressor. Extra precaution must be taken not to expose the R410A system too long to moist air.

### **(4) Check list before installation / servicing**

- Tubing

Refrigerant R410A is more easily affected by dust of moisture compared with R22, make sure to temporarily cover the ends of the tubing prior to installation.

- Compressor oil

No additional charge of compressor oil is permitted.

- Refrigerant

No other refrigerant other than R410A

- Tools (size of service port is different from R22 system)

Tools specifically for R410A only (must not be used for R22 or other refrigerant)

i) Gauge manifold and charging hose

ii) Gas leak detector

iii) Refrigerant cylinder/charging cylinder

iv) Vacuum pump c/w adapter

v) Flare tools

vi) Refrigerant recovery machine

### **(5) Handling and installation guidelines**

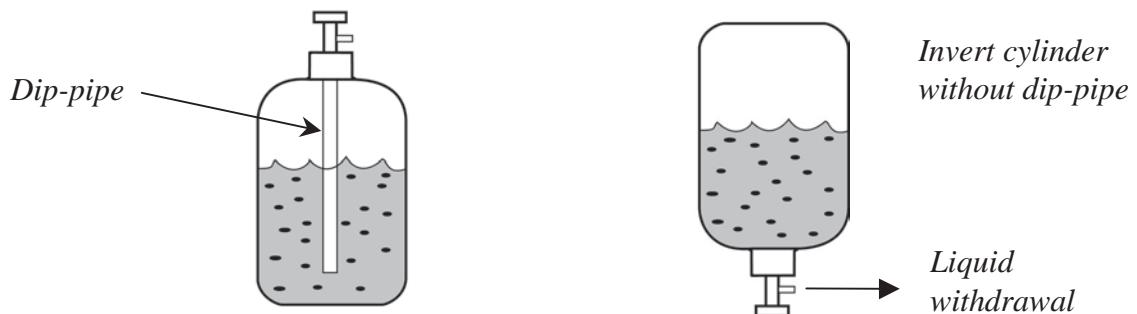

Like R22 system, the handling and installation of R410A system are closely similar. All precautionary measures; such as ensuring no moisture, no dirt or chips in the system, clean brazing using nitrogen, and thorough leak check and vacuuming are equally important requirements. However, due to its hydroscopic POE oil, additional precautions must be taken to ensure optimum and trouble free system operation.

(a) During installation or servicing, avoid prolong exposure of the internal part of the refrigerant system to moist air. Residual POE oil in the piping and components can absorb moisture from the air.

(b) Ensure that the compressor is not exposed to open air for more than the recommended time specified by its manufacturer (typically less than 10 minutes). Removed the seal plugs only when the compressor is about to be brazed.

(c) The system should be thoroughly vacuumed to 1.0 Pa (700mmHg) or lower. This vacuuming level is more stringent than R22 system so as to ensure no incompressible gas and moisture in the system.

- (d) When charging R410A, ensure that only liquid is being withdrawn from the cylinder or can. This is to ensure that only the original composition of R410A is being delivered into the system. The liquid composition can be different from the vapor composition.

- (e) Normally, the R410A cylinder or can is being equipped with a dip pipe for liquid withdrawal. However, if the dip pipe is not available, invert the cylinder or can so as to withdraw liquid from the valve at the bottom.

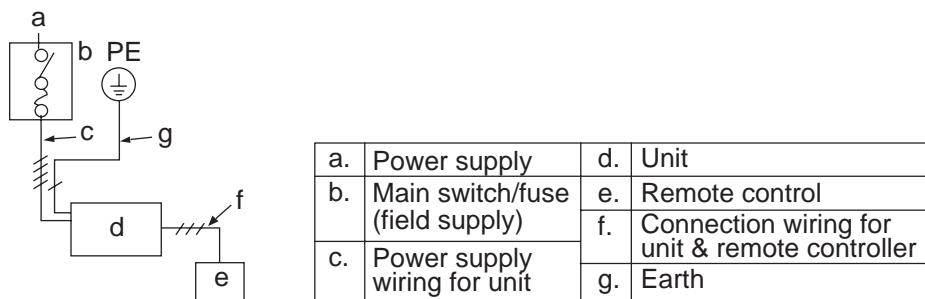

## Wire Connection

- All electrical work must be carried out by qualified electrician and accordance with local supply requirement and associate regulation.

### Method for connecting electric wire

Before connecting the wire, consult the electric power company of jurisdiction.

- (1) The entire wiring diagram of unit

- (2) Wiring connection to unit

Route the power supply wires and control wire through the knockout holes in the unit.

Remove the service panels and connect the units power supply wires to terminal block inside the control box, as shown.

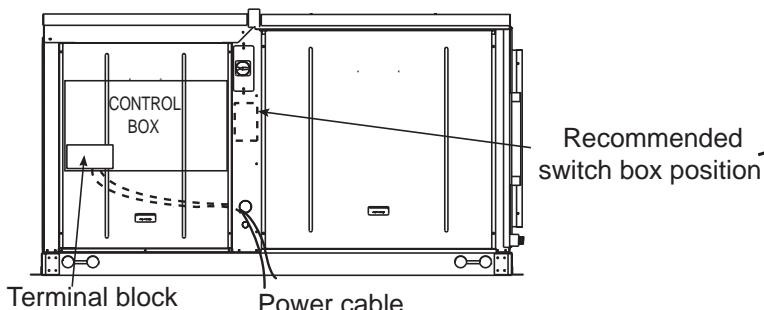

**Note:**

While installing the circuit breaker onto the unit, make sure that the screws do not damage the components (e.g. coil) inside the unit.

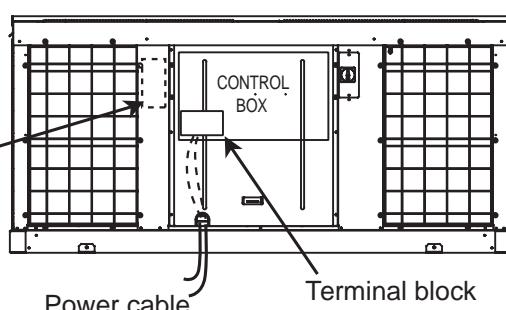

The switch box also can be installed without attaching to the unit.

The knockout holes are only in M5RT90BR; M5RT120BR comes with a power cable hole.

**M5RT90BR**

**M5RT120BR**

**Wiring Example And Selection Of Circuit Breaker**

Model	Power cable (mm <sup>2</sup> )	Breaker capacity(A)	Over current protection switch (A)	Earth cable (mm <sup>2</sup> )
M5RT90BR	4	32	32	4
M5RT120BR	6	40	40	6
M5RT150BR	10	40	40	10
M5RT180BR	10	50	50	10

**Note:**

A main switch or other means for disconnection, having a contact separation in all poles, must be incorporated in fixed wiring in accordance with local and national legislation.

- The unit is to be wired directly from an electrical distribution board either by a circuit breaker (preferred) or HRC fuse.
- Fix the power supply wiring to control module. Connect control wiring to control terminal block through the control box's hole.
- Earth wiring must be connected.
- The power supply cord must be equivalent to H05VV-F (60227 IEC 52 or 60227 IEC 53) which is the minimum requirement, and to be used in protective tube.

**WARNING**

- Before working in this unit, isolate it from the power supply.
- Electrical wiring to this unit and the remote controller shall be installed in accordance with the appropriate requirement of the local wiring code.

Observe the notes mentioned below when wiring to the terminal block. Precautions to be taken for power supply wiring.

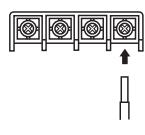

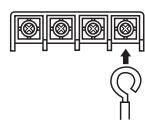

(Use a round crimp-style terminal for connection to the terminal block. In case it cannot be used due to unavoidable reasons, be sure to observe the following instruction.)

Round crimp-style terminal

**CAUTION**

When connecting the connection wires to the terminal block using a single core wire, be sure to perform curling. Problems with the work may cause heat and fires.

Strip wire end to this point.

Excessive strip length may cause electrical shock or leakage.

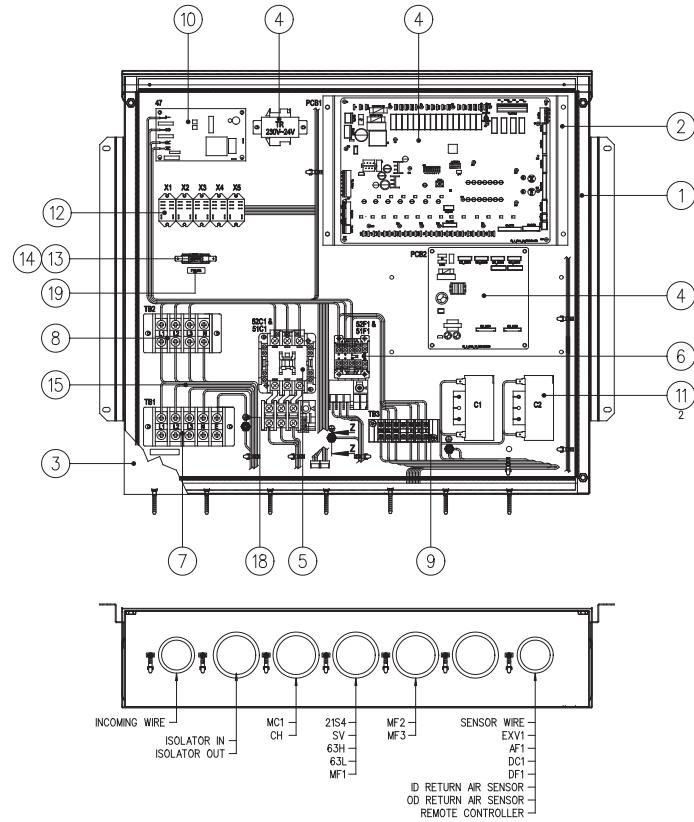

Good

Wrong

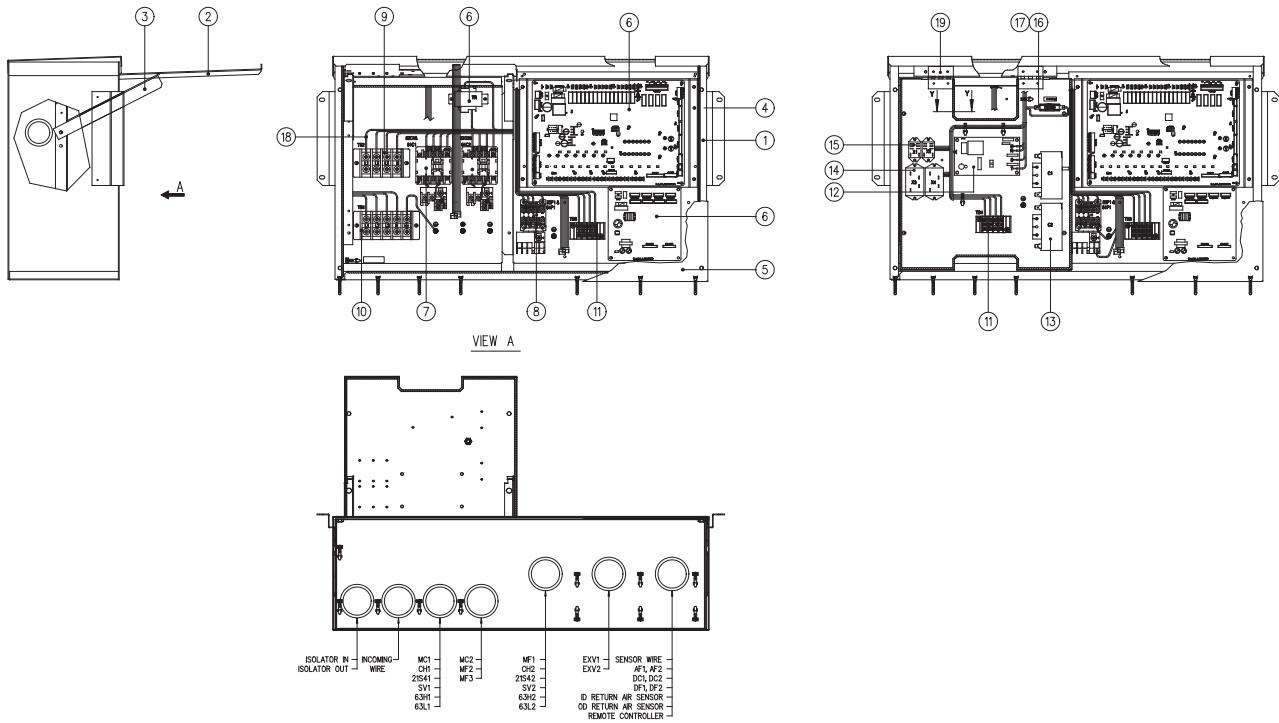

Stripping wire at terminal block

- Pull the wire and make sure that it does not disconnect. Then fix the wire in place with a wire stop.

# Selection Process

## Drive Package Selection

<p>The following are the design requirements for M5RT90BR unit:</p> <p>Model : M5RT090BR  Supply air Quantity = 1600 l/s  External Static Pressure = 175 Pa</p>											
Step 1:	<p>From the blower curve (at 1600 l/s)  Standard operating system;  Internal Static Pressure = 90 Pa</p>										
Step 2:	<p>Therefore at 1600 l/s and 175 Pa external static pressure  Total Static Pressure = 175 + 90 Pa  = 265 Pa</p>										
Step 3:	<p>From the blower curve, the design requirement calls for RPM about 690 RPM.</p> <p>From the table:</p> <table> <tr> <td>Motor pulley</td><td>= 71 mm</td></tr> <tr> <td>Blower pulley</td><td>= 160 mm</td></tr> <tr> <td>Motor RPM</td><td>= 1480 RPM</td></tr> </table> <p>In order to obtain 700 RPM, we calculate the new blower pulley as:  (while maintaining the motor pulley)</p> $\begin{aligned} Db &= 71 \times (1480/690) \\ &= 152.3 \text{ mm} \end{aligned}$ <p>Let us take close approximation of 150 mm diameter pulley size</p> <p>Recheck, with <math>Db = 142 \text{ mm}</math></p> <table> <tr> <td>Blower pulley</td><td>= 1480 <math>\times</math> (71/150)</td></tr> <tr> <td></td><td>= 700 RPM</td></tr> </table> <p>We thus need to change the blower pulley from 160 mm to 150 mm in order to obtain the higher operating static pressure</p>	Motor pulley	= 71 mm	Blower pulley	= 160 mm	Motor RPM	= 1480 RPM	Blower pulley	= 1480 $\times$ (71/150)		= 700 RPM
Motor pulley	= 71 mm										
Blower pulley	= 160 mm										
Motor RPM	= 1480 RPM										
Blower pulley	= 1480 $\times$ (71/150)										
	= 700 RPM										
Step 4:	<p>When the pulley is changed, the V-belt length must be rechecked.</p> <table> <tr> <td>V-belt length, L</td><td>= <math>2C + 1.57 (Db + Dm) + (Db-Dm)^2/4C</math></td></tr> <tr> <td></td><td>= <math>(2 \times 545) + 1.57 (150 + 71) + (150-71)^2/4 \times 545</math></td></tr> <tr> <td></td><td>= 1439.8</td></tr> </table> <p>We thus can use a belt with length of 1440mm</p> <table> <tr> <td>Where, C</td><td>= 545mm distance between the centres of the two pulleys</td></tr> </table>	V-belt length, L	= $2C + 1.57 (Db + Dm) + (Db-Dm)^2/4C$		= $(2 \times 545) + 1.57 (150 + 71) + (150-71)^2/4 \times 545$		= 1439.8	Where, C	= 545mm distance between the centres of the two pulleys		
V-belt length, L	= $2C + 1.57 (Db + Dm) + (Db-Dm)^2/4C$										
	= $(2 \times 545) + 1.57 (150 + 71) + (150-71)^2/4 \times 545$										
	= 1439.8										
Where, C	= 545mm distance between the centres of the two pulleys										
Step 5:	<p>From the blower curve, we can also notice that the motor power input has maintained within the current operating range of the standard unit's motor.</p> <p>Summary:</p> <table> <tr> <td>i) Fan motor kW</td><td>= 1.1 kW</td></tr> <tr> <td>ii) Blower pulley diameter</td><td>= 150 mm</td></tr> <tr> <td>iii) V-belt size</td><td>= 1440 mm</td></tr> </table>	i) Fan motor kW	= 1.1 kW	ii) Blower pulley diameter	= 150 mm	iii) V-belt size	= 1440 mm				
i) Fan motor kW	= 1.1 kW										
ii) Blower pulley diameter	= 150 mm										
iii) V-belt size	= 1440 mm

# Engineering & Physical Data

## General Data - Heat pump (R410a)

MODEL		M5RT90BR	M5RT120BR
NOMINAL COOLING CAPACITY (GROSS)	Btu/h	93300	121400
	W	27340	35580
NOMINAL HEATING CAPACITY (NETT)	Btu/h	85000	118700
	W	24910	34790
NOMINAL TOTAL INPUT POWER (COOLING)	W	8140	10780
NOMINAL TOTAL INPUT POWER (HEATING)	W	7330	10840
NOMINAL RUNNING CURRENT (COOLING)	A	16.6	21.2
NOMINAL RUNNING CURRENT (HEATING)	A	14.8	20.8
POWER SOURCE	V/Ph/Hz	380 ~ 415 / 3 / 50	
REFRIGERANT TYPE / CONTROL		R410A / EXV	
EER (GROSS)	W/W	3.36	3.30
COP (NET)	W/W	3.40	3.21
EVAPORATOR	SOUND POWER LEVEL @ 100 ESP	dBA	68
	SOUND POWER LEVEL @ Std ESP	dBA	73
CONTROL	AIR DISCHARGE		DUCTED
	OPERATION		WIRED
AIR FLOW	I/s / cfm	1560 / 3300	2030 / 4300
EXTERNAL STATIC PRESSURE	Pa/in.wg.	147 / 0.6	147 / 0.6
CONDENSATE DRAIN SIZE	mm/in	25.4 / 1	25.4 / 1.0
CONDENSER	AIR FLOW	I/s / cfm	3884 / 8230
	SOUND POWER LEVEL	dBA	82
UNIT DIMENSION	HEIGHT	mm/in	1150 / 45.3
	WIDTH	mm/in	1638 / 64.5
	DEPTH	mm/in	2063 / 81.2
PACKING DIMENSION	HEIGHT	mm/in	1345 / 53.0
	WIDTH	mm/in	2321 / 91.4
	DEPTH	mm/in	1758 / 69.2
UNIT WEIGHT (NET)	kg/lb	445 / 981	580 / 1279
REFRIGERANT CHARGE	kg/lb	6.1 / 13.4	(5.8 X 2) / (12.8 X 2)

1) ALL SPECIFICATIONS ARE SUBJECTED TO CHANGE BY THE MANUFACTURER WITHOUT PRIOR NOTICE.

2) ALL UNITS ARE BEING TESTED AND COMPLY TO ISO 5151.

3) NOMINAL COOLING AND HEATING CAPACITY ARE BASED ON THE CONDITIONS BELOW :

- A) COOLING - 27°C DB / 19°C WB INDOOR AND 35°C DB / 24°C WB OUTDOOR
- B) HEATING - 20°C DB INDOOR AND 7°C DB / 6°C WB OUTDOOR

4) SOUND PRESSURE LEVELS ARE MEASURED ACCORDING TO JIS B 8616 STANDARD.

5) ALL PERFORMANCE CALCULATIONS ARE STRICTLY FOLLOWING EUROVENT STANDARD.

# Performance Data

## Calculation Steps

*Interpolation* method can be used to get the total capacity, TC and sensible capacity, SC and power input, PI at those temperatures which are not stated out in the table. Extrapolation method are not allowed to be used to get the TC, SC and PI.

### Example:

**Model:** M5RT150BR

**Indoor Condition:** 25°C DB, 17°C WB

**Outdoor Condition:** 37°C DB

**Fan Speed:** High (5650CFM)

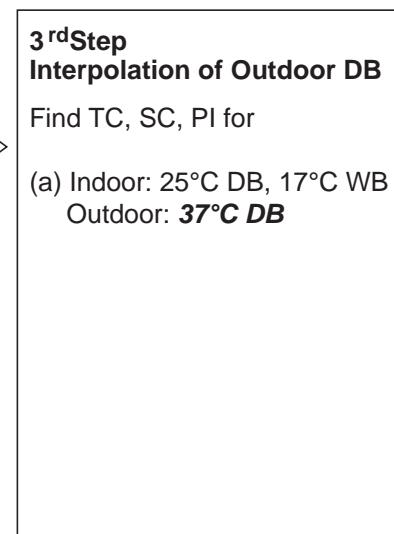

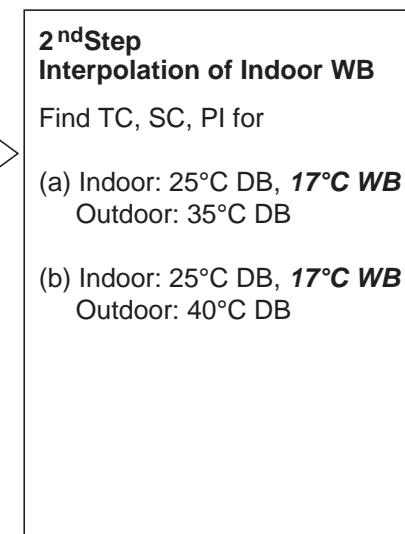

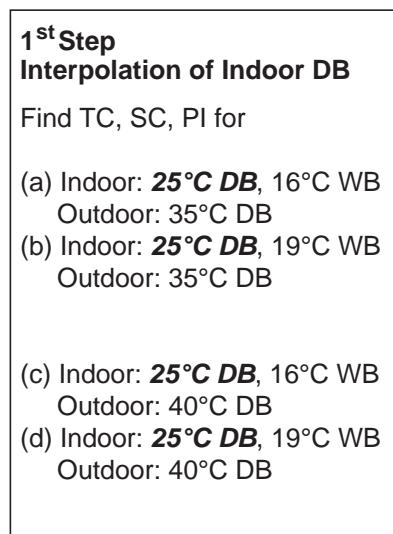

### Solution:

#### Overall

Based on the Performance Table

1. Refer to the Indoor DB column,
  - 25°C is located between 24°C and 27°C for 16°CWB (Thus, Interpolation need to be applied)
  - 25°C is located between 24°C and 27°C for 19°CWB (Thus, Interpolation need to be applied)
2. Refer to the Indoor WB column,
  - 17°C is located between 16°CWB and 19°CWB for 25°CDB  
(Thus, Interpolation need to be applied)
3. Refer to the Outdoor DB column,
  - 37°C is located between 35°C and 40°C. (Thus, Interpolation need to be applied)

Please follow the steps below in order to get the required capacity.

Details:

**1<sup>st</sup> Step:**

To obtain the Total capacity and Sensible capacity and Power input for

(a) Indoor Condition: 25°C DB, 16°C WB

Outdoor Condition: 35°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C		
		35		
		TC (kW)	SHC (kW)	PI (kW)
16				
	24	41.41	35.59	12.81
	25	x <sub>1</sub>	y <sub>1</sub>	z <sub>1</sub>
	27	43.48	41.63	12.94

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{43.48kW - 41.41kW}{43.48kW - x_1kW}$$

$$\Rightarrow x_1 = 42.10kW$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{41.63kW - 35.59kW}{41.63kW - y_1kW}$$

$$\Rightarrow y_1 = 37.60kW$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{12.94kW - 12.81kW}{12.94kW - z_1kW}$$

$$\Rightarrow z_1 = 12.85kW$$

(b) Indoor Condition: 25°C DB, 16°C WB

Outdoor Condition: 40°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C			PI (kW)	
		40				
		TC (kW)	SHC (kW)	PI (kW)		
16						
	24	38.59	33.52	13.91		
	25	x <sub>2</sub>	y <sub>2</sub>	z <sub>2</sub>		
	27	40.74	39.20	14.06		

### Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{40.74\text{kW} - 38.59\text{kW}}{40.74\text{kW} - x_2\text{kW}}$$

$$\Rightarrow x_2 = 39.31\text{kW}$$

### Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{39.20\text{kW} - 33.52\text{kW}}{39.20\text{kW} - y_2\text{kW}}$$

$$\Rightarrow y_2 = 35.41\text{kW}$$

2

### Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{27^\circ C - 24^\circ C}{27^\circ C - 25^\circ C} = \frac{14.06\text{kW} - 13.91\text{kW}}{14.06\text{kW} - z_2\text{kW}}$$

$$\Rightarrow z_2 = 13.96\text{kW}$$

\* Repeat process (a) and (b) in 1st step for the condition below:

(c) Indoor Condition: 25°C DB, 19°C WB

Outdoor Condition: 35°C DB

$$\Rightarrow x_3 = 44.55\text{kW}$$

$$\Rightarrow y_3 = 31.63\text{kW}$$

$$\Rightarrow z_3 = 13.03\text{kW}$$

(d) Indoor Condition: 25°C DB, 19°C WB

Outdoor Condition: 40°C DB

$$\Rightarrow x_4 = 41.46\text{kW}$$

$$\Rightarrow y_4 = 29.99\text{kW}$$

$$\Rightarrow z_4 = 14.13\text{kW}$$

**2<sup>nd</sup> Step:**

To obtain the Total capacity, Sensible capacity and Power Input for

(a) Indoor Condition: 25°C DB, 17°C WB

Outdoor Condition: 35°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C		
		35		
		TC (kW)	SHC (kW)	PI (kW)
16		...	...	
17		42.10	37.60	12.85
19	25	.....	$x_5$	$y_5$
		44.55	31.63	13.03

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{44.55\text{kW} - 42.10\text{kW}}{44.55\text{kW} - x_5\text{kW}}$$

$$\Rightarrow x_5 = 42.92\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{31.63\text{kW} - 37.60\text{kW}}{31.63\text{kW} - y_5\text{kW}}$$

$$\Rightarrow y_5 = 35.61\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{13.03\text{kW} - 12.85\text{kW}}{13.03\text{kW} - z_5\text{kW}}$$

$$\Rightarrow z_5 = 12.91\text{kW}$$

(b) Indoor Condition: 25°C DB, 17°C WB

Outdoor Condition: 40°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C		
		40		
		TC (kW)	SHC (kW)	PI (kW)
		⋮	⋮	
16	25	39.31	35.41	13.96
17		⋮	⋮	⋮
19		41.46	29.99	14.13

#### Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{41.46\text{kW} - 39.31\text{kW}}{41.46\text{kW} - x_6\text{kW}}$$

$$\Rightarrow x_6 = 40.03\text{kW}$$

#### Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{29.99\text{kW} - 35.41\text{kW}}{29.99\text{kW} - y_6\text{kW}}$$

$$\Rightarrow y_6 = 33.60\text{kW}$$

#### Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{19^\circ\text{C} - 16^\circ\text{C}}{19^\circ\text{C} - 17^\circ\text{C}} = \frac{14.13\text{kW} - 13.96\text{kW}}{14.13\text{kW} - z_6\text{kW}}$$

$$\Rightarrow z_6 = 14.02\text{kW}$$

**3<sup>rd</sup> Step:**

To obtain the Total capacity and Sensible capacity for

**(a) Indoor Condition:** 25°C DB, 17°C WB

**Outdoor Condition:** 37°C DB

Indoor WB °C	Indoor DB °C	Outdoor DB, °C									
		35			37			40			
		TC (kW)	SHC (kW)	PI (kW)	TC (kW)	SHC (kW)	PI (kW)	TC (kW)	SHC (kW)		
25	17	.....	42.92	35.61	12.91	x	y	z	40.03	33.60	14.02

Total capacity, TC

Interpolation Method:

$$\Rightarrow \frac{40^\circ C - 35^\circ C}{40^\circ C - 37^\circ C} = \frac{40.03\text{kW} - 42.92\text{kW}}{40.03\text{kW} - x\text{kW}}$$

$$\Rightarrow x = 41.76\text{kW}$$

Sensible capacity, SHC

Interpolation Method:

$$\Rightarrow \frac{40^\circ C - 35^\circ C}{40^\circ C - 37^\circ C} = \frac{33.60\text{kW} - 35.61\text{kW}}{33.60\text{kW} - y\text{kW}}$$

$$\Rightarrow y = 34.81\text{kW}$$

Power Input, PI

Interpolation Method:

$$\Rightarrow \frac{40^\circ C - 35^\circ C}{40^\circ C - 37^\circ C} = \frac{14.02\text{kW} - 12.91\text{kW}}{14.02\text{kW} - z\text{kW}}$$

$$\Rightarrow z = 13.35\text{kW}$$

## Performance Table

CN_WIR	Panel Remote Controller

# Model: M5RT150BR

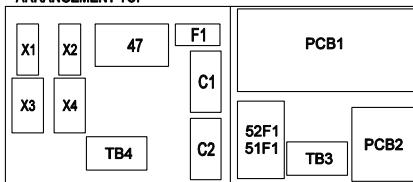

SYMBOL	NAME
MC1/MC2	Compressor Motor
MF1	Fan Motor (Indoor)
MF2,3	Fan Motor (Outdoor)
52C1/52C2	Contactor (Compressor)
52F1	Contactor (Fan I/D)
51C1/51C2	Over Current Relay (Compressor)
TB1,2,3,4	Terminal Block
F1	Fuse
51F1	Over Current Relay (Fan I/D)
CH1/CH2	Crankcase Heater
47	Phase Protector
63H1/63H2	High Pressure Switch
63L1/63L2	Low Pressure Switch
C1,C2	Capacitor (O/D Fan Motor)
SV1/SV2	Solenoid Coil
21S41/21S42	4-Way Valve
X1,X2,X3,X4	Auxiliary Relays
SW1	Selector Switch
TR	Transformer 230V~24V
TB_RA	I/D Return Air Sensor
CN_ODA	O/D Air Sensor
CN_SNR1	Sensor DC1, DF1 & AF1
CN_SNR2	Sensor DC2, DF2 & AF2
CN_EXV1/CN_EXV2	Expansion Valve
CN_WIR	Panel Remote Controller

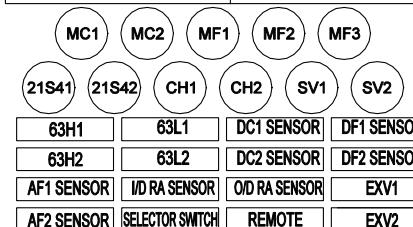

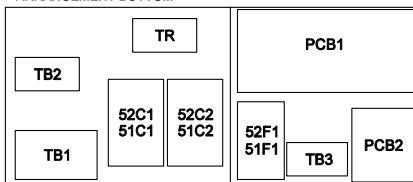

# Model: M5RT180BR

CN_WIR	Panel Remote Controller

# Servicing & Maintenance

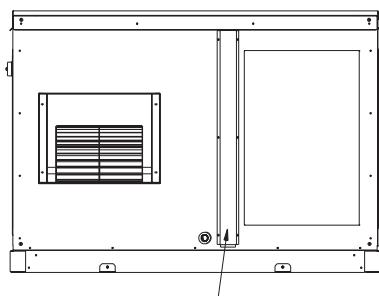

## Service Of The Filter

- Remove any dust adhering to the filter by using a vacuum cleaner or wash in lukewarm water (below 40°C) with neutral cleaning detergent.
- Rinse the filter well and dry before placing it back onto the unit.
- Do not use gasoline, volatile substances or chemicals to clean the filter.
- Clean the filter at least once every 2 weeks. Or more frequently if necessary.

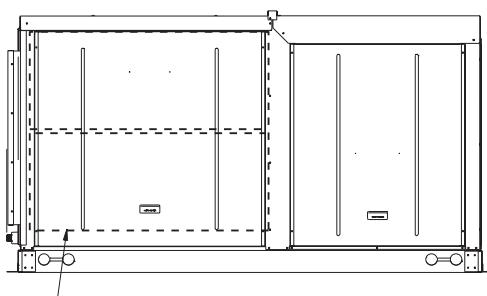

## Filter Position

The filters are mounted in front of the indoor heat exchanger.

Unit shown in the diagram is M5RT90BR. Other models shall follow the same method.

Remove filter cover for filter service.

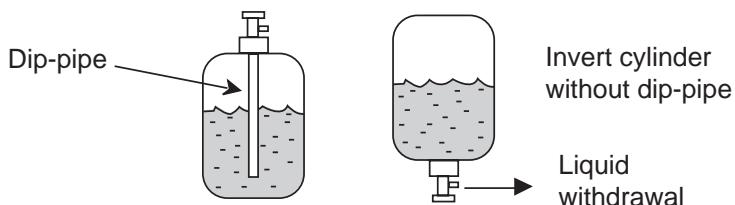

Alternatively, remove service panel for filter service.

## Vacuuming And Charging

The rooftop package units are factory pre-charged with sufficient refrigerant. However, there may be a need for charge recovery during service and maintenance works. Therefore, some precautions must be taken to ensure optimum and trouble-free system operation:

- (i) The system should be thoroughly vacuumed to ensure no incompressible gas and moisture in the system.
- (ii) Use a vacuum pump for R410A exclusively. Using the same vacuum pump for different refrigerants may damage the vacuum pump or the unit.
- (iii) The refrigerant should never be released directly into the environment.
- (iv) When charging R410A, ensure that only liquid is being withdrawn from the cylinder or can.

Normally, the R410A cylinder or can is being equipped with a dip-pipe for liquid withdrawal. However, if the dip-pipe is not available, invert the cylinder or can so as to withdraw liquid from the valve at the bottom.

### **! CAUTION**

- R410A must be charged as liquid. Usually R410A cylinder is equipped with a dip-pipe for liquid withdrawal. If there is no dip-pipe, the cylinder should be inverted so as to withdraw liquid R410A from the valve.
- Do not top-up when servicing leak, as this will reduce the unit performance. Vacuum the unit thoroughly and then charge the unit with fresh R410A according to the amount recommended in the specification.

# Troubleshooting

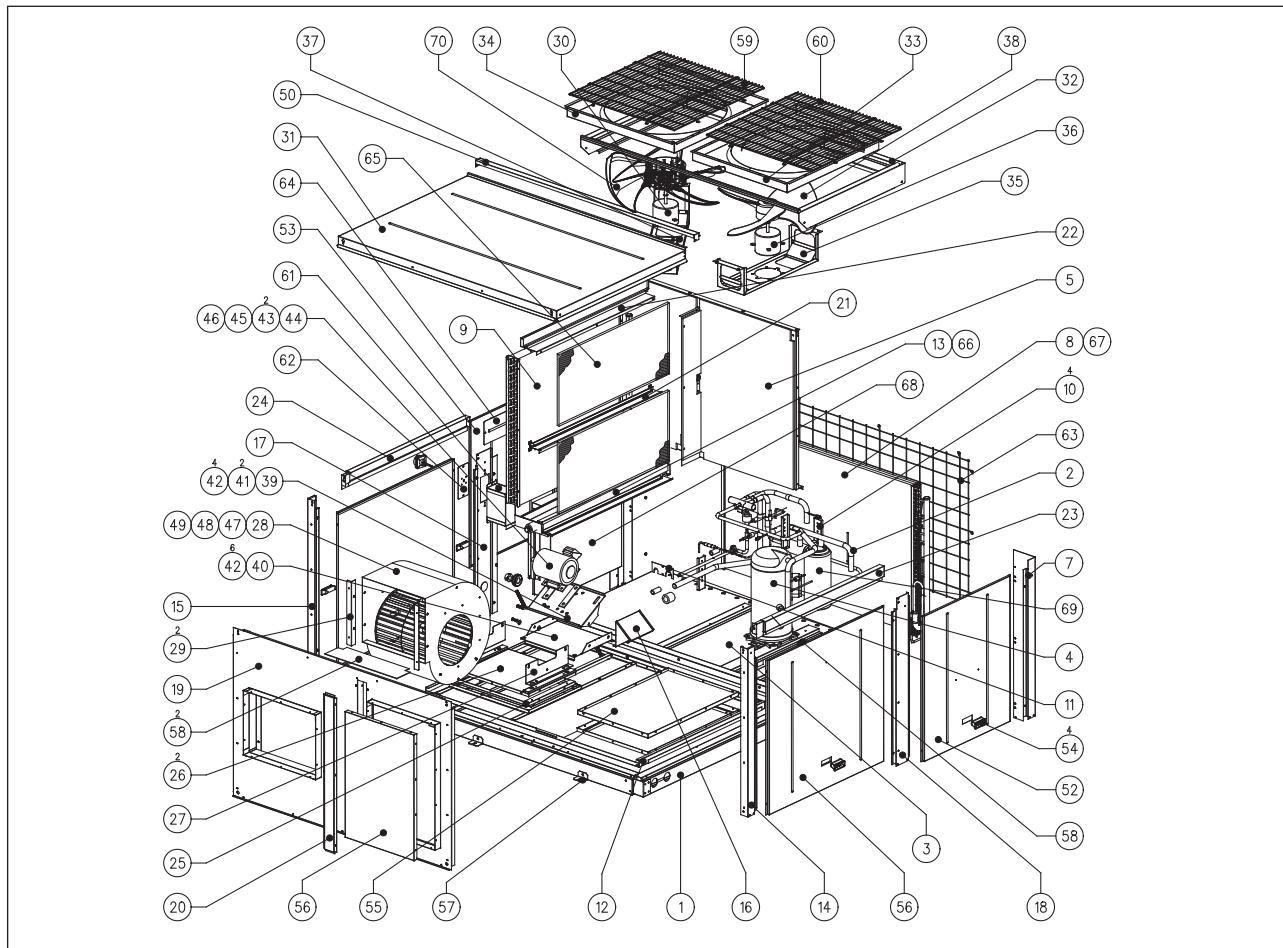

**For any enquiries on spare part please contact your authorized dealer. If any malfunction of the air conditioner unit is noted, check the following fault conditions and causes for some simple troubleshooting tips.**

Problem	Causes	Action
Unit does not run.	Power failure.	Press the [ON/OFF] after power restore.
	Fuse blown or circuit breaker tripped.	Replace fuse or reset circuit breaker.
	Power supply wiring phase incorrect.	Modify the wiring phase.
Compressor does not operate in 3 min after unit has started.	Protection against frequent starting.	Wait for 3 min for the compressor to start.
Air flow is low.	Filter is filled with dust and dirt.	Clean the filter.
	There are some obstacles at the air inlet or outlet of the units.	Remove obstacles.
Compressor operate continuously.	Dirty air filter.	Clean the air filter.
	Temperature setting is too low (for cooling). Temperature setting is too high (for heating).	Reset the temperature.
No cool air delivered during cooling cycle, or no hot air delivered during heating cycle.	Temperature setting is too high (for cooling). Temperature setting is too low (for heating).	Set the temperature lower. Set the temperature higher.
On heating cycle, no air delivered (M5RT90BR). Or, the delivered air is not warm enough (M5RT120BR).	Unit is in defrosting cycle.	Wait for a while. (It will be resumed after defrosting.)

If the fault persists, please call your authorized local dealer/serviceman.
