PKFY-P25VBM-ER2

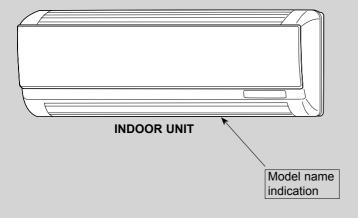

PKFY-P25VBM-ER3

#### Revision:

- PKFY-P15/20/25VBM-ER3 have been added in REVISED EDITION-C.
- Some descriptions have been modified.
- Please void OCH418 REVISED EDITION-B.

#### Note:

- This manual describes only service data of the indoor units.
- RoHS compliant products have <G> mark on the spec name plate.

#### **CONTENTS**

1. TECHNICAL CHANGES2
2. SAFETY PRECAUTION3
3. PART NAMES AND FUNCTIONS5
4. SPECIFICATION13
5. OUTLINES AND DIMENSIONS 15
6. WIRING DIAGRAM16
7. REFRIGERANT SYSTEM DIAGRAM19
8. TROUBLESHOOTING19
9. DISASSEMBLY PROCEDURE28

PARTS CATALOG (OCB418)

### **TECHNICAL CHANGES**

1

PKFY-P15VBM-ER2 → PKFY-P15VBM-ER3
PKFY-P20VBM-ER2 → PKFY-P25VBM-ER3
PKFY-P25VBM-ER3

INDOOR CONTROLLER BOARD (I.B.) has been changed. (S/W version up)

PKFY-P15VBM-ER2
PKFY-P20VBM-ER1
PKFY-P25VBM-ER2
→ PKFY-P25VBM-ER2
→ PKFY-P25VBM-ER2

HEAT EXCHANGER and WATER CUT have been changed.

PKFY-P20VBM-E PKFY-P20VBM-ER1 PKFY-P25VBM-ER1

INDOOR CONTROLLER BOARD (I.B.) has been changed.

### SAFETY PRECAUTION

#### Cautions for units utilizing refrigerant R410A

#### Do not use the existing refrigerant piping.

The old refrigerant and lubricant in the existing piping contains a large amount of chlorine which may cause the lubricant deterioration of the new unit.

#### Use "low residual oil piping"

If there is a large amount of residual oil (hydraulic oil, etc.) inside the piping and joints, deterioration of the lubricant will result.

# Store the piping indoors, and both ends of the piping sealed until just before brazing. (Leave elbow joints, etc. in their packaging.)

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

# The refrigerant oil applied to flare and flange connections must be ester oil, ether oil or alkylbenzene oil in a small amount.

If large amount of mineral oil enters, that can cause deterioration of refrigerant oil etc.

# Charge refrigerant from liquid phase of gas cylinder.

If the refrigerant is charged from gas phase, composition change may occur in refrigerant and the efficiency will be lowered.

#### Do not use refrigerant other than R410A.

If other refrigerant (R22 etc.) is used, chlorine in refrigerant can cause deterioration of refrigerant oil etc.

# Use a vacuum pump with a reverse flow check valve.

Vacuum pump oil may flow back into refrigerant cycle and that can cause deterioration of refrigerant oil etc.

# Use the following tools specifically designed for use with R410A refrigerant.

The following tools are necessary to use R410A refrigerant.

Tools for R410A						
Gauge manifold Flare tool						
Charge hose	Size adjustment gauge					
Gas leak detector	Vacuum pump adaptor					
Torque wrench	Electronic refrigerant					
	charging scale					

#### Handle tools with care.

If dirt, dust or moisture enters into refrigerant cycle, that can cause deterioration of refrigerant oil or malfunction of compressor.

#### Do not use a charging cylinder.

If a charging cylinder is used, the composition of refrigerant will change and the efficiency will be lowered.

#### Use the specified refrigerant only.

#### Never use any refrigerant other than that specified.

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.

Correct refrigerant is specified in the manuals and on the spec labels provided with our products.

We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

Ventilate the room if refrigerant leaks during operation. If refrigerant comes into contact with a flame, poisonous gases will be released.

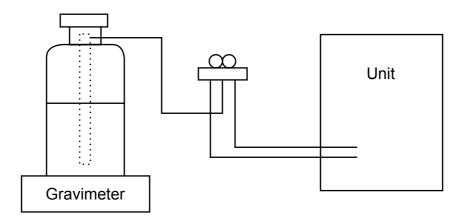

#### [1] Cautions for service

- (1) Perform service after collecting the refrigerant left in the unit completely.
- (2) Do not release refrigerant in the air.
- (3) After completing service, charge the cycle with specified amount of refrigerant.
- (4) When performing service, install a filter drier simultaneously. Be sure to use a filter drier for new refrigerant.

#### [2] Additional refrigerant charge

When charging directly from cylinder

- · Check that cylinder for R410A on the market is syphon type.
- · Charging should be performed with the cylinder of syphon stood vertically. (Refrigerant is charged from liquid phase.)

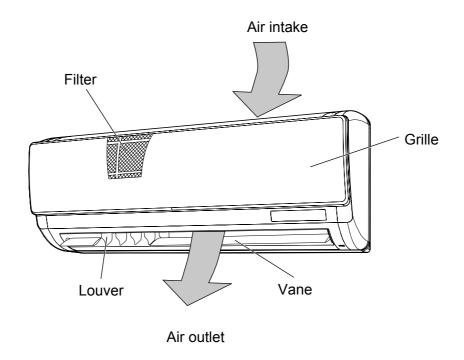

#### [3] Service tools

Use the below service tools as exclusive tools for R410A refrigerant.

No.	Tool name	Specifications				
①	Gauge manifold	· Only for R410A				
		· Use the existing fitting specifications. (UNF1/2)				
		· Use high-tension side pressure of 5.3 MPa·G or over.				
2	Charge hose	· Only for R410A				
		· Use pressure performance of 5.09 MPa·G or over.				
3	Electronic scale	_				
4	Gas leak detector	· Use the detector for R134a, R407C or R410A.				
(5)	Adaptor for reverse flow check	· Attach on vacuum pump.				
6	Refrigerant charge base	_				
7	Refrigerant cylinder	· Only for R410A Top of cylinder (Pink)				
		Cylinder with syphon				
8	Refrigerant recovery equipment	_				

# PART NAMES AND FUNCTIONS

#### 3-1. Indoor unit

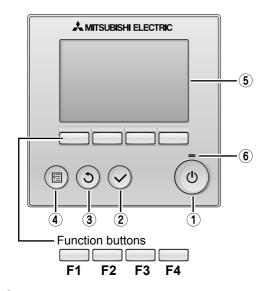

#### 3-2. WIRED REMOTE CONTROLLER <PAR-30MAA/PAR-31MAA>

#### Wired remote controller function

\* The functions which can be used are restricted according to the model.

: Supported X: Unsupported

	Function	PAR-30MAA/	PAR-21MAA		
	Function	Slim	City multi	PAR-Z IIVIAA	
Body	Product size H × W × D (mm)	120 × 1	120 × 130 × 19		
	LCD	Full Do	ot LCD	Partial Dot LCD	
	Backlight		)	×	
Energy-saving	Energy-saving operation schedule	0	×	×	
	Automatic return to the preset temperature		×		
Restriction	Setting the temperature range restriction		0		
Function	Operation lock function		0		
	Weekly timer		×		
	On / Off timer		0		
	High Power	0	×	×	
	Manual vane angle		)	0	

#### 1 ON / OFF button

Press to turn ON/OFF the indoor unit.

#### **(2) SELECT button**

Press to save the setting.

#### (3) RETURN button

Press to return to the previous screen.

#### (4) MENU button

Press to bring up the Main menu.

#### (5) Backlit LCD

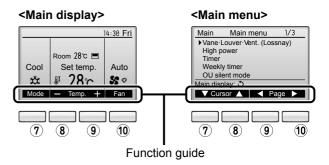

Operation settings will appear.

When the backlight is off, pressing any button turns the backlight on and it will stay lit for a certain period of time depending on the screen.

When the backlight is off, pressing any button turns the backlight on and does not perform its function. (except for the  $\bigcirc$  (ON / OFF) button)

The functions of the function buttons change depending on the screen. Refer to the button function guide that appears at the bottom of the LCD for the functions they serve on a given screen.

When the system is centrally controlled, the button function guide that corresponds to the locked button will not appear.

#### 6 ON / OFF lamp

This lamp lights up in green while the unit is in operation. It blinks while the remote controller is starting up or when there is an error.

#### 7 Function button F1

Main display: Press to change the operation mode. Main menu: Press to move the cursor down.

#### 8 Function button | F2

Main display: Press to decrease temperature.

Main menu: Press to move the cursor up.

#### 9 Function button F3

Main display: Press to increase temperature.

Main menu: Press to go to the previous page.

#### 10 Function button F4

6

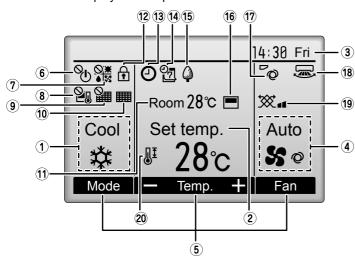

Main display: Press to change the fan speed. Main menu: Press to go to the next page.

The main display can be displayed in two different modes: "Full" and "Basic".

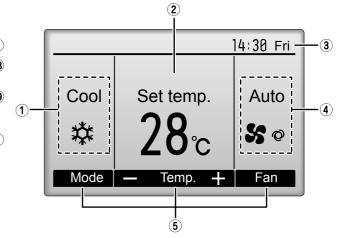

The factory setting is "Full". To switch to the "Basic" mode, change the setting on the Main display setting.

#### <Full mode>

\* All icons are displayed for explanation.

<Basic mode>

#### 1 Operation mode

Indoor unit operation mode appears here.

#### 2 Preset temperature

Preset temperature appears here.

#### 3 Clock (See the Installation Manual.)

Current time appears here.

#### (4) Fan speed

Fan speed setting appears here.

#### **5** Button function guide

Functions of the corresponding buttons appear here.

Appears when the ON/OFF operation is centrally controlled.

Appears when the operation mode is centrally controlled.

Appears when the preset temperature is centrally controlled.

Appears when the filter reset function is centrally controlled.

### 10

Indicates when filter needs maintenance.

# 11 Room temperature (See the Installation Manual.)

Current room temperature appears here.

### 12 🔓

Appears when the buttons are locked.

## 13 C

Appears when the On/Off timer or Night setback function is enabled.

# (14) OF

Appears when the Weekly timer is enabled.

## 15 🗘

Appears while the units are operated in the energy-save mode.

### 16

Appears when the built-in thermistor on the remote controller is activated to monitor the room temperature.

appears when the thermistor on the indoor unit is activated to monitor the room temperature.

### 17 6

Indicates the vane setting.

### 18 🐷

Indicates the louver setting.

### 19 💥

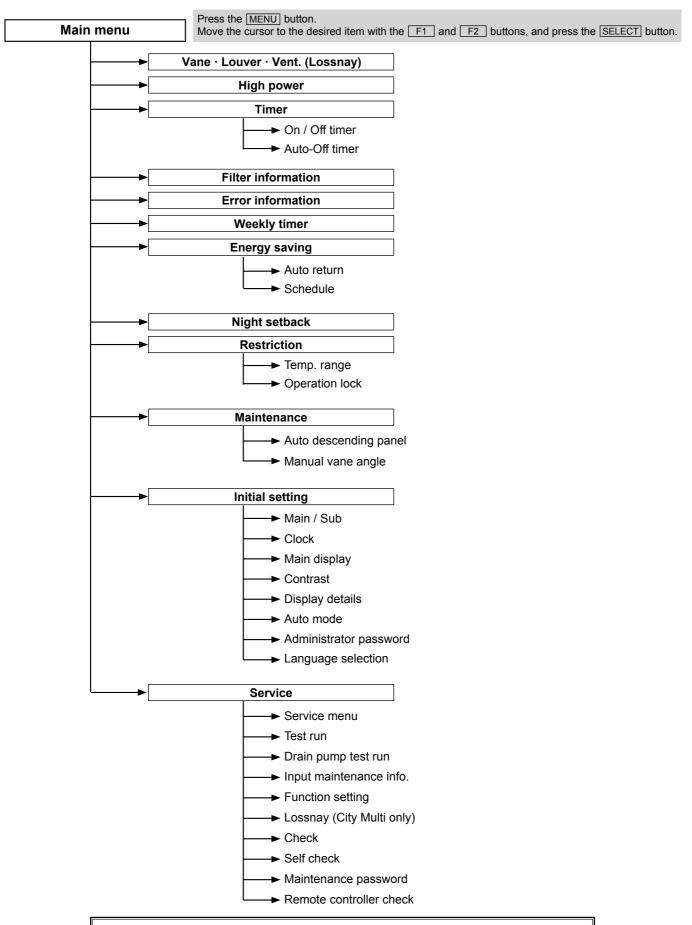

Indicates the ventilation setting.

# 20 JI

Appears when the preset temperature range is restricted.

Most settings (except ON / OFF, mode, fan speed, temperature) can be made from the Menu screen.

#### Menu structure

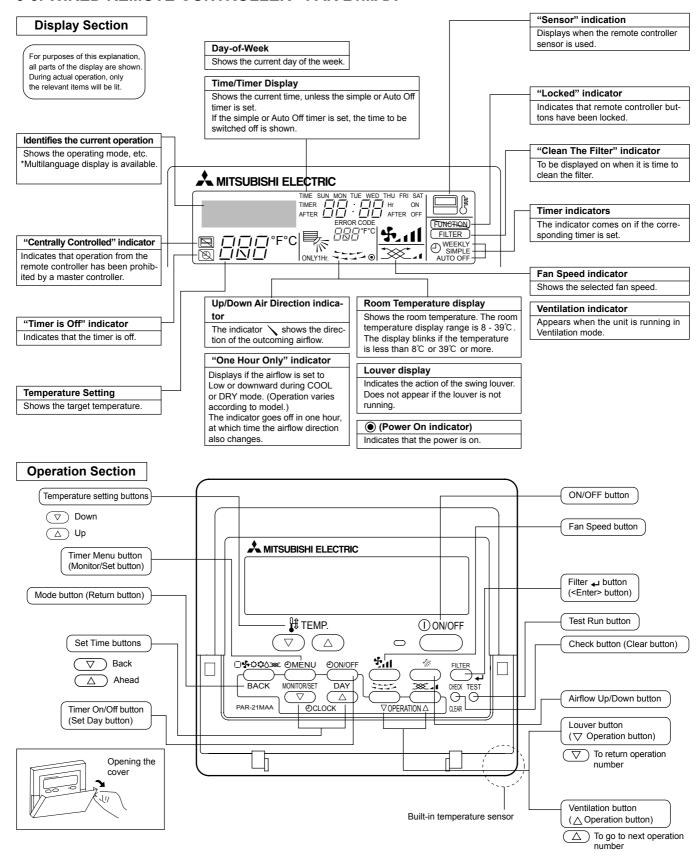

#### Main menu list

Setting and display items		Setting details					
Vane · Louver (Lossnay)	· Vent.	Use to set the vane angle.  • Select a desired vane setting from f ve different settings.  Use to turn ON / OFF the louver.  • Select a desired setting from "ON" and "OFF."  Use to set the amount of ventilation.  • Select a desired setting from "Off," "Low," and "High."					
High power		Use to reach the comfortable room temperature quickly.  Units can be operated in the High-power mode for up to 30 minutes.					
Timer	On/Off timer	Jse to set the operation On/Off times. Time can be set in 5-minute increments. * Clock setting is required.					
	Auto-Off timer	Use to set the Auto-Off time.  • Time can be set to a value from 30 to 240 in 10-minute increments.					
Filter informa	tion	Use to check the f Iter status.  • The f Iter sign can be reset.					
Error informa	tion	Use to check error information when an error occurs.  • Error code, error source, refrigerant address, unit model, manufacturing number, contact information (dealer's phone number) can be displayed.  * The unit model, manufacturing number, and contact information need to be registered in advance to be displayed.					
Weekly timer		Use to set the weekly operation On / Off times.  • Up to eight operation patterns can be set for each day.  * Clock setting is required.  * Not valid when the On/Off timer is enabled.					
Energy saving	Auto return	Use to get the units to operate at the preset temperature after performing energy-save operation for a specif ed time period.  • Time can be set to a value from 30 and 120 in 10-minute increments.  * This function will not be valid when the preset temperature ranges are restricted.					
	Schedule	Set the start/stop times to operate the units in the energy-save mode for each day of the week, and set the energy-saving rate.  • Up to four energy-save operation patterns can be set for each day.  • Time can be set in 5-minute increments.  • Energy-saving rate can be set to a value from 0% or 50 to 90% in 10% increments.  * Clock setting is required.					
Night setback		Use to make Night setback settings.  • Select "Yes" to enable the setting, and "No" to disable the setting. The temperature range and the start/stop times can be set.  * Clock setting is required.					
Restriction	Temp. range	Use to restrict the preset temperature range.  • Different temperature ranges can be set for different operation modes.					
	Operation lock	Use to lock selected functions.  • The locked functions cannot be operated.					
Maintenance	Auto descending panel	Auto descending panel (Optional parts) Up / Down you can do.					
	Manual vane angle	Use to set the vane angle for each vane to a f xed position.					
Initial setting	Main/Sub	When connecting two remote controllers, one of them needs to be designated as a sub controller.					
	Clock	Use to set the current time.					
	Main display	Use to switch between "Full" and "Basic" modes for the Main display.  • The default setting is "Full."					
	Contrast	Use to adjust screen contrast.					

Setting and	display items	Setting details
Initial setting	Display details	Make the settings for the remote controller related items as necessary.  Clock: The factory settings are "Yes" and "24h" format.  Temperature: Set either Celsius (°C) or Fahrenheit (°F).  Room temp.: Set Show or Hide.  Auto mode: Set the Auto mode display or Only Auto display.
	Auto mode	Whether or not to use the AUTO mode can be selected by using the button. This setting is valid only when indoor units with the AUTO mode function are connected.
	Administrator password	The administrator password is required to make the settings for the following items.  • Timer setting • Energy-save setting • Weekly timer setting  • Restriction setting • Outdoor unit silent mode setting • Night set back
	Language selection	Use to select the desired language.
Service	Test run	Select "Test run" from the Service menu to bring up the Test run menu.  • Test run • Drain pump test run
	Input maintenance	Select "Input maintenance Info." from the Service menu to bring up the Maintenance information screen.  The following settings can be made from the Maintenance Information screen.  • Model name input • Serial No. input • Dealer information input
	Function setting	Make the settings for the indoor unit functions via the remote controller as necessary.
	LOSSNAY setting (City Multi only)	This setting is required only when the operation of City Multi units is interlocked with LOSSNAY units.
	Check	Error history: Display the error history and execute delete error history.  Refrigerant leak check: Refrigerant leaks can be judged.  Smooth maintenance: The indoor and outdoor maintenance data can be displayed.  Request cord: Details of the operation data including each thermistor temperature and error history can be checked.
	Self check	Error history of each unit can be checked via the remote controller.
	Maintenance password	Take the following steps to change the maintenance password.
	Remote controller check	When the remote controller does not work properly, use the remote controller checking function to troublushoot the problem.

#### 3-3. WIRED REMOTE CONTROLLER <PAR-21MAA>

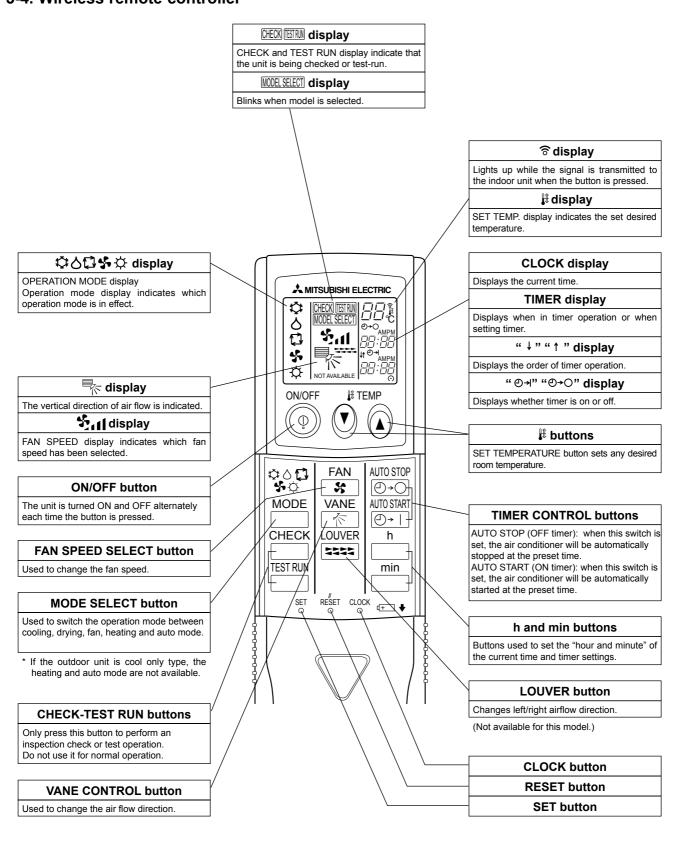

#### Note:

- "PLEASE WAIT" message
  - This message is displayed for approximately 3 minutes when power is supplied to the indoor unit or when the unit is recovering from a power failure.
- "NOT AVAILABLE" message

This message is displayed if an invalid button is pressed (to operate a function that the indoor unit does not have). If a single remote controller is used to operate multiple indoor units simultaneously that are different types, this message will not be displayed as far as any of the indoor units is equipped with the function.

#### 3-4. Wireless remote controller

- 1. At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- 2. In case of connecting MA-remote controller, please connect MA-remote controller cable in an accessory to the connector  $\frac{1}{1-2}$ . (Remote controller wire is non-polar.)
- 3. In case of using M-NET, please connect to TB5 (Transmission line is non-polar.)
- 5. The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the fig:\*1.
- 6. Please set the switch SW5 according to the power supply voltage. Set SW5 to 240V side when the power supply is 230 and 240 volts. When the power supply is 220 volts, set SW5 to 220V side.

#### Note

- 1. At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- 2. In case of using MA-remote controller, please connect MA remote controller cable in an accessory to the connector (Remote controller wire is non-polar.)
- 3. In case of using M-NET, please connect to TB5 (Transmission line is non-polar.)
- 4. Symbols used in wiring diagram above are,  $\Box$ : terminal block,  $\bigcirc$   $\bigcirc$ : connector
- 5. The setting of the SW2 dip switches differs in the capacity. For the detail, refer to the fig: \*1.
- 6. Please set the switch SW5 according to the power supply voltage.

Set SW5 to 240V side when the power supply is 230 and 240 volts.

When the power supply is 220 volts, set SW5 to 220V side.

#### Linear expansion valve

#### ① Operation summary of the linear expansion valve

- Linear expansion valve opens/closes through stepping motor after receiving the pulse signal from the indoor controller board.
- Valve position can be changed in proportion to the number of pulse signal.
- <Connection between the indoor controller board and the linear expansion valve>

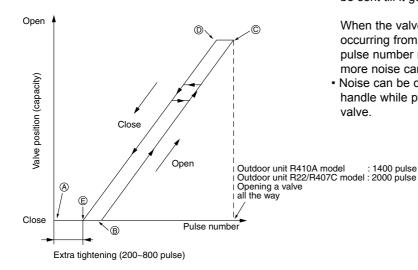

Note: Since the number of the connector at the controller board side and the relay connector are different, follow the color of the lead wire.

#### <Output pulse signal and the valve operation>

Output	Output					
(Phase)	1	2	3	4		
φ1	ON	OFF	OFF	ON		
φ2	ON	ON	OFF	OFF		
φ3	OFF	ON	ON	OFF		
φ4	OFF	OFF	ON	ON		

2 Linear expansion valve operation

Closing a valve :  $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1$ Opening a valve :  $4 \rightarrow 3 \rightarrow 2 \rightarrow 1 \rightarrow 4$ The output pulse shifts in above order.

- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.
- When the switch is turned on, 2200 pulse closing valve signal will be sent till it goes to point (a) in order to define the valve position.

When the valve moves smoothly, there is no noise or vibration occurring from the linear expansion valves : however, when the pulse number moves from e to a or when the valve is locked, more noise can be heard than in a normal situation.

 Noise can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve.

③ Troubleshooting

Symptom	Check points	Countermeasures
Operation circuit failure of the micro processor	Disconnect the connector on the controller board, then connect LED for checking.	Exchange the indoor controller board at drive circuit failure.
Linear expansion valve mechanism is locked.	Motor will idle and make a ticking noise when the motor is operated while the linear expansion valve is locked. This ticking sound is the sign of the abnormality.	Exchange the linear expansion vale.
Short or breakage of the motor coil of the linear expansion valve	Measure the resistance between each coil (white-red, yellow-brown, orange-red, blue-brown) using a tester. It is normal if the resistance is in the range of 150 $\Omega$ ±10%.	Exchange the linear expansion valve.
Valve doesn't close completely.	To check the linear expansion valve, operate the indoor unit in fan mode and at the same time operate other indoor units in cooling mode, then check the pipe temperature < liquid pipe temperature > of the indoor unit by the outdoor multi controller board operation monitor. During fan operation, linear expansion valve is closed completely and if there is any leaking, detecting temperature of the thermistor will go lower. If the detected temperature indicated in the remote controller, it means the valve is not closed all the way. It is not necessary to exchange the linear expansion valve, if the leakage is small and not affecting normal operation.	If large amount of refriger- ant is leaked, exchange the linear expansion valve.
Wrong connection of the connector or contact failure	Check the color of lead wire and missing terminal of the connector.	Disconnect the connector at the controller board, then check the continuity.

PKFY-P15VBM-E

PKFY-P20VBM-E PKFY-P20VBM-ER1

PKFY-P25VBM-E PKFY-P25VBM-ER1

Be careful when removing heavy parts.

#### **OPERATION PROCEDURE**

# 1. REMOVING THE LOWER SIDE OF THE INDOOR UNIT FROM THE INSTALLATION PLATE

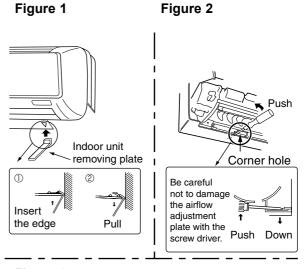

When there is removing plate

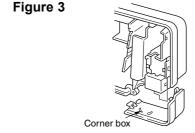

- (1) Remove the corner box at right lower side of the indoor unit and remove the removing plate from the corner box. (See Figure 3)
- (2) Insert the removing plate at the back side of the corner box to remove the indoor unit.
- (3) Remove the hook by pulling the lower side of the indoor unit down as shown in the Figure 1.

When there is no removing plate or it cannot be used for some reason.

- (1) Remove the front panel.
- (2) Insert the screw driver to the corner hole at both left and right side as shown in the Figure 2.
- (3) Push it up, then pull down the lower side of indoor unit and remove the hook.

#### **PHOTOS & ILLUSTRATIONS**

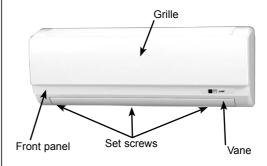

#### 2. REMOVING THE FRONT PANEL

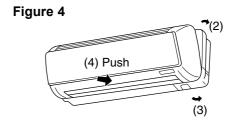

- \* Before removing the front panel, leave the open space at upper side of the vane approximately 2 to 3 cm.
- (1) Remove the 3 screw caps then remove the 3 set screws. (Refer to Photo 1)
- (2) Remove the grille.
- (3) Remove the left side of the front panel, then right side.
- (4) After removing the lower side of the front panel a little, remove it as pulling the upper side toward you.
- \* Please pay attention to the nozzle assembly.

#### INSTALLING THE FRONT PANEL

- (1) Insert the lower side of the front panel under the vane.
- (2) Set the upper side of the front panel. (See Figure 4)
- (3) Set the lower side of the front panel then fix it with the screws.
- (4) Press the area indicated as arrow sign and set it to the air conditioner unit.
- (5) Attach the screw caps.

#### Photo 1

# 3. REMOVING THE INDOOR CONTROLLER BOARD AND INDOOR POWER BOARD

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover (screw 4 × 10). (See Photo 2)

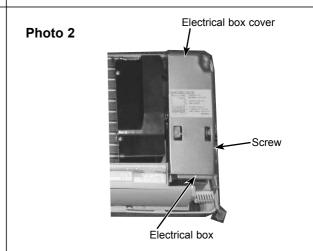

#### INDOOR CONTROLLER BOARD

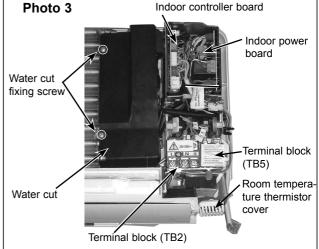

- Disconnect the following connectors from the indoor controller board.
  - CN60, CN5V, CN90, CN29, CN21
  - CN42, CN81, CN3A, CN20
- (2) Pull out the indoor controller board toward you, then disconnect the rest of connectors.
  - CN53M, CN35M (See Photo 3)

#### INDOOR POWER BOARD

- (1) Disconnect the following connectors on the indoor power board
  - FAN, CN53P, CN35P, CN2M, CND
- (2) Remove the earth wire for TAB1.
- (3) Pull out the indoor power board toward you. (See Photo 3)

#### **PHOTOS & ILLUSTRATIONS**

#### 4. REMOVING THE ELECTRICAL BOX

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Pull the nozzle assembly toward you as opening the catch of the nozzle assembly. (See Photo 5)
- (4) Disconnect the indoor/outdoor transmission wiring of TB5.
- (5) Disconnect the power supply wiring of TB2.
- (6) Disconnect the relay connector of MA-remote controller.
- (7) Disconnect the following connector on the indoor controller board.
  - CN60, CN5V, CN29, CN21, CN90, (CN3A)
- (8) Disconnect the connector (FAN) on the indoor power board.
- (9) Remove the ground wire fixing screw.
- (10) Pull the disconnected lead wire out from the electrical box.
- (11) Push up the upper fixture catch to remove the box, then pull the lower fixture and remove it from the box fixture.

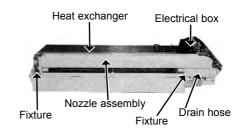

#### Photo 4 Linear expansion valve Ground wire set screw Indoor controller board Indoor power board Liquid pipe temp.. thermistor (TH22) MA-remote controller connector Terminal block (TB5) Gas pipe temp. thermistor (TH23) Terminal block (TB2)

#### 5. REMOVING THE NOZZLE ASSEMBLY AND DRAIN HOSE

- (1) Remove the front panel (Refer to procedure 2).
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Disconnect the connector (CN5V) on the indoor controller board.
- (4) After unhook the right side of the corner box, press the upper left side and remove the corner box.
- (5) Remove the nozzle assembly from the fixture. (See Photo 5)
- (6) Remove the drain hose.

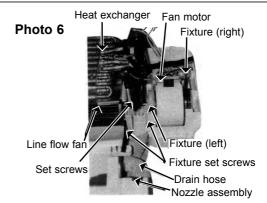

### **PHOTOS & ILLUSTRATIONS**

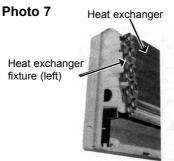

#### Photo 5

#### 6. REMOVING THE LINE FLOW FAN AND THE FAN MOTOR

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the nozzle assembly. (Refer to procedure 5)
- (3) Remove the electrical parts box. (Refer to procedure 4)
- (4) Remove the fixture while pressing the right side of motor fixture catch. (See Photo 6)
- (5) Remove the left side of the motor fixture.
- (6) Loosen the screw which fixes the line flow fan to the fan motor, then remove the fan motor by sliding it to the right side. (See Photo 6)
- (7) Pull the left-hand side of the heat exchanger toward you. (See Photo 7)
- (8) Remove the line flow fan.

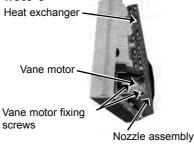

#### 7. REMOVING THE VANE MOTOR

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the screw of the electrical parts box cover, and remove the cover.
- (3) Remove the 2 screws of the vane motor. (See Photo 8) Disconnect the relay connector and remove the motor from the shaft.
- (4) Disconnect the vane motor connector (CN5V) on the indoor controller board.

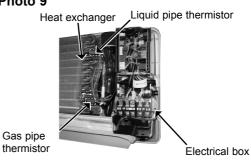

#### Photo 8

# 8. REMOVING THE LIQUID PIPE THERMISTOR AND GAS PIPE THERMISTOR

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Remove the water cut. (See Photo 3)
- (4) Cut the wiring fixed band.
- (5) Remove the liquid pipe thermistor and gas pipe thermistor. (See Photo 9)
- (6) Disconnect the connector (CN29) (CN21) on the indoor controller board.

#### Photo 9

#### 2. REMOVING THE FRONT PANEL

- \* Before removing the front panel, leave the open space at upper side of the vane approximately 2 to 3 cm.
- (1) Remove the 3 screw caps then remove the 3 set screws. (See Photo 1)
- (2) Remove the grille.
- (3) Remove the left side of the front panel, then right side.
- (4) After removing the lower side of the front panel a little, remove it as pulling the upper side toward you.
- \* Please pay attention to the nozzle assembly.

#### INSTALLING THE FRONT PANEL

- (1) Insert the lower side of the front panel under the vane.
- (2) Set the upper side of the front panel. (See Figure 4)
- (3) Set the lower side of the front panel then fix it with the screws.
- (4) Press the area indicated as arrow sign and set it to the air conditioner unit.
- (5) Attach the screw caps.

#### Photo 1

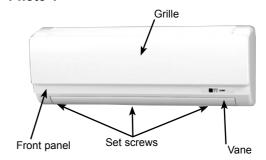

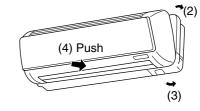

Figure 4

# 3. REMOVING THE INDOOR CONTROLLER BOARD AND INDOOR POWER BOARD

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover (screw 4 × 10). (See Photo 2)

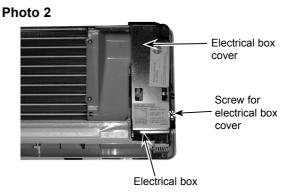

#### INDOOR CONTROLLER BOARD

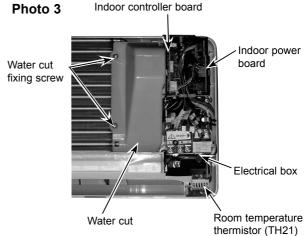

- Disconnect the following connectors from the indoor controller board.
  - CN60, CN5V, CN90, CN29, CN21
  - CN42, CN81, CN3A, CN20
- (2) Pull out the indoor controller board toward you, then disconnect the rest of connectors.
  - CN53M, CN35M (See Photo 3)

#### INDOOR POWER BOARD

- Disconnect the following connectors on the indoor power board.
  - FAN, CN53P, CN35P, CN2M, CND
- (2) Remove the earth wire for TAB1.
- (3) Pull out the indoor power board toward you. (See Photo 3)

#### **PHOTOS & ILLUSTRATIONS**

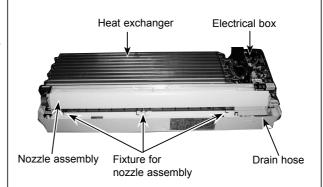

#### 4. REMOVING THE NOZZLE ASSEMBLY AND DRAIN HOSE

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Disconnect the connector (CN5V) on the indoor controller board.
- (4) After unhook the right side of the corner box, press the upper left side and remove the corner box.
- (5) Remove the nozzle assembly from the fixture. (See Photo 4)
- (6) Remove the drain hose.

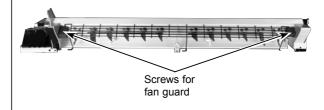

#### Photo 4

#### 5. REMOVING THE FAN GUARD

- (1) Remove the nozzle assembly and drain hose. (Refer to procedure 4)
- (2) Remove the screws of fan guard. (See Photo 5)
- (3) Remove the fan guard.

#### Photo 5

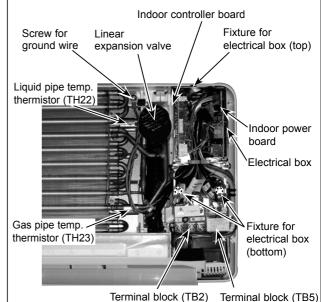

#### 6. REMOVING THE ELECTRICAL BOX

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Remove the water cut. (See Photo 3)
- (4) Pull the nozzle assembly toward you as opening the catch of the nozzle assembly. (See Photo 4)
- (5) Disconnect the indoor/outdoor transmission wiring of TB5.
- (6) Disconnect the power supply wiring of TB2.
- (7) Disconnect the relay connector of MA-remote controller.
- (8) Disconnect the following connector on the indoor controller board.
  - CN60, CN5V, CN29, CN21, CN90, (CN3A)
- (9) Disconnect the connector (FAN) on the indoor power board.
- (10) Remove the ground wire fixing screw.
- (11) Pull the disconnected lead wire out from the electrical box.
- (12) Push up the upper fixture catch to remove the box, then pull the lower fixture and remove it from the box fixture.

#### 7. REMOVING THE LINE FLOW FAN AND THE FAN MOTOR

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the nozzle assembly. (Refer to procedure 4)
- (3) Remove the electrical parts box. (Refer to procedure 6)
- (4) Remove the fixture while pressing the right side of motor fixture catch. (See Photo 7)
- (5) Remove the left side of the motor fixture.
- (6) Loosen the set screw which fixes the line flow fan to the fan motor, then remove the fan motor by sliding it to the right side. (See Photo 7)
- (7) Pull the left-hand side of the heat exchanger toward you. (See Photo 9)
- (8) Remove the line flow fan.

#### Photo 8

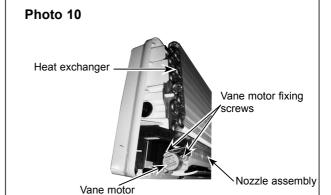

#### Photo 9

#### 8. REMOVING THE VANE MOTOR

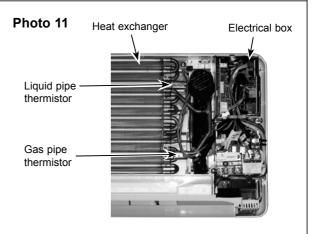

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the screw of the electrical parts box cover, and remove the cover.
- (3) Remove the 2 screws of the vane motor. (See Photo 10)
  Disconnect the relay connector and remove the motor
  from the shaft
- (4) Disconnect the vane motor connector (CN5V) on the indoor controller board.

# 9. REMOVING THE LIQUID PIPE THERMISTOR AND GAS PIPE THERMISTOR

- (1) Remove the front panel. (Refer to procedure 2)
- (2) Remove the electrical box cover. (See Photo 2)
- (3) Remove the water cut. (See Photo 3)
- (4) Cut the wiring fixed band.
- (5) Remove the liquid pipe thermistor and gas pipe thermistor. (See Photo 11)
- (6) Disconnect the connector (CN29) (CN21) on the indoor controller board.
