# Topvex

**Topvex is a series of efficient ventilation units designed for offices, shops, schools, daycare centres or similar premises. The units are especially designed to meet the coming energy requirements and have therefore a very low energy use. To simplify the installation and commissioning the units are included with control system and pre-configured.**

**It could not be easier!**

Topvex are delivered pre-programmed, tested and ready for installation. Connect the Topvex unit to the duct system, connect any external components, connect the main supply, set the time and date, adjust the week scheduler, temperatures, airflows and the unit is installed. It could not be easier!

**EC fan motors – low energy use and low noise**

Unlike AC motors with frequency converters, the EC motors operate with high efficiency even at low RPM (see the diagram). This contributes to good energy saving performance. The EC motors are also very quiet at both high and low RPM.

**Easy inspection**

To facilitate inspection and maintenance, both fans and the rotating/crossflow heat exchanger are removable. SR07, 09 and 11 have a fixed heat exchanger. All power cables have quick release couplings – the fans and heat exchanger can be released easily.

### Easy electrical connections and service

All electrical connections are done at the same terminal block, with clear markings.

### General

Topvex units are delivered enclosed in plastic and mounted on pallets. The units are fully connected internally. The automatic control system is preset and has been test-run at the factory.

Any cables to external components should be connected to terminals in the connection space. The same applies to valve actuators for heating coils.

### Measurement at Systemair's Development Centre

Topvex are measured and tested at Systemair's Development Centre. The air volume is measured in accordance with AMCA 210-99 "Laboratory methods of testing fans for rating". Sound is measured in accordance with AMCA 300-96 "Test Code for Sound Rating".

### Unit housing

The unit's casing is made up from double-skinned aluzinc sheet metal, AZ 185, with internal mineral insulation. Topvex TR, TX, SR and SX stands on fixed sections that raise the units about 100-130 mm above the floor. Topvex FR assemblies lying horizontal on the floor, suspended in the ceiling, standing horizontal on the units long side or mounted horizontal or vertically (supply air pointing upwards) on the wall. Topvex has large inspection doors that have lockable handles and removable hinges. Topvex FR has slide doors as an accessory. A separate safety switch is included. The control panel is connected with 10 m cable (included).

### Components

#### Fans

Topvex has effective plug-fans with maintenance-free external rotormotors. The fans have been selected to provide optimal operation in respect of air volume,

sound level and efficiency. The units have electronically commutated motors, so called EC-motors with very high efficiency. The EC motors are controlled via the control unit. To facilitate main-

tenance and servicing the fans have quick release connections for the electrical cables.

#### Heat exchanger – Rotating

The rotating heat exchanger is non-hygroscopic and belt driven. A spare belt is mounted on the rotor wheel on delivery (TR, SR).

The rotor belt is a round plastic belt of the elastic type with high friction. A rotor guard will give an alarm if the rotating heat exchanger stops. The rotor construction with pleated aluminium is optimised in respect of high efficiency and low pressure

*Topvex TR09-15 EL*

*Topvex SR04-06 EL*

*Topvex FR08 HW*

drop. The rotor have a robust construction which makes it stable and reliable also after a very long time of operating. At balanced airflows the efficiency is up to 85%. The heat exchanger is removable with quick release connections for

the power cables. SR07, 09 and 11 have a fixed heat exchanger.

**Heat exchanger – Crossflow**

The crossflow heat exchanger is non-hygroscopic. The construction with pleated aluminium is optimised in respect of high efficiency and low pressure drop. At balanced airflow the efficiency is up to 60%. The heat exchanger is removable.

**By-pass damper**

Topvex TX/SX is equipped with a stepless by-pass damper as standard. The damper is used to by-pass the supply air during warm season (no need of heat recovering) and to de-ice the heat exchanger during cold season (selectable).

**De-icing function – TX/SX**

Ice accretion of the heat exchanger is depending on the outdoor temperature and the humidity in the extract air. The humidity in the extract air is varying a lot depending on the activities in the building e.g. an industry premises is normally producing much less humidity than a day-care centre. Therefore has the aggressiveness of the de-icing function been made settable (1-5) so that it can be optimized to different applications.

**Heating coil – water**

Accessory for the Topvex TR/SR 03-06 CAV/VAV and FR03-11 CAV/VAV units. Delivered separate and to be mounted on site, plug-in.

*N.B. Fits to units without heater, not units with El heater.*

The hot water coil is located after the supply air fan and the water pipes connect throughout the gable of the unit. The material is copper piping with a frame of galvanized sheet steel and aluminum fins. The coil has venting nipples and an immersion sensor as frost guard. If there is a risk of freezing in the hot water coil, the control valve is forced open to prevent freezing. If there is still a risk of freezing, the unit is stopped and the outdoor air damper (accessory) is closed. After a freezing situation, the unit will re-start when the return water temperature is above 7°C and the alarm has been acknowledged.

**The hot water coils are available in:**

- Low power HWL
- High power HWH

**Heating coil – electric**

The heating coil is located after the supply air fan. It has elements of stainless steel. The electric heating coil has two overheating protection one with automatic reset and one with manual reset.

When the unit is switched off, through the overheating protections, the built-in clock or the hand/auto switch, the electrical heater is immediately stopped while the fans are kept running during 3 minutes for cooling down the heater. After an overheating situation, the unit will re-start when the overheating protection has been reset and the alarm has been acknowledged.

**Filters**

The units are delivered with bag filters as standard. Both of the filters are placed before the heat exchanger, to keep the exchanger clean. The filters are mounted in guide rails that facilitate insertion and removal for inspection and service. Topvex are fitted with sealing strips to provide optimal sealing against the filters. Filter class F7 on supply air and F5 on extract air are used as standard. Filter monitoring is done via the built-in timer (Standard controller) or via built in pressure transmitters measuring the filter pressure drop (Advanced controller). See page 8 for more info about controller.

**Duct connection**

Circular connections with rubber sealing, rectangular have flanged connections.

## Controls

### Display

The illuminated display has 4 rows of 20 characters each and 20 different languages are available. Arrows are used to simplify the usage. The background illumination is normally switched off, and is activated by pushing one of the buttons. The illumination is then switched off again after a period of inactivity.

### LEDs

The alarm LED is marked with a  symbol.

The "write enable" LED is marked with a  symbol.

### Push-Buttons

All functions can be set (configured) by using the information in the display and the push-buttons on the controller.

### Standard & Advanced control

Systemair are using two different controls depending on Air Handling Unit. To facilitate the use of the controllers both controllers have the same menu structure and using the same technical terms. For further information, see page 60-61.

#### Standard, E17S

TX03-06  
SX03-06

#### Advanced, E28

TR09-15  
TR03-06 CAV/VAV  
SR07-11  
SR03-06 CAV/VAV  
FR03-11 CAV/VAV

*Standard* is a controller equipped with the most common functions used in smaller AHU's. This controller is very easy to handle.

*Advanced* is a fully equipped controller designed to cover the most of the market needs. The menu system adapts to what functions that is activated, this together with a start up wizard makes the controller easy to handle.

**SCP control panel**  
Width = 115 mm  
Height = 94 mm  
Depth = 26 mm

### Main difference between Standard and Advanced control:

	Standard, E17S	Advanced, E28
Using of E-tool, a PC-based commissioning software.	No	Yes
Temperature control	3 control modes	6 control modes
Time controlled airflow	Week timer	Week timer + Holidays + Digital timer channels for e.g. door locks
Fan control	Settable between 0-100% control signal.	CAV, constant air volume or VAV, variable air volume. Outdoor temp. dependent airflow.
Demand control	Possible to use external equipment with relay output for increasing airflow one step.	Possible to use external equipment with analogue output for step-less increasing of air flow or relay output.
DX cooling control, (External DX cooler)	Step controller for converting the analogue controls signal to a digital 2-step, binary control necessary (accessory).	Up to 3-step, binary control is standard.
HW/CW Pump control	No	Yes
Filter supervising	Time controlled	Pressure drop controlled

## Regulations

\*\*\*\* Option to TR/SR03-06 CAV/VAV and FR 03-11 CAV/VAV

## Topvex TR

## Topvex TX

**T – Top connection**  
**R – Rotating heat exchanger**  
**X – Cross flow heat exchanger**

Topvex TR/TX is a “Plug and play” air handling unit with a modern design intended for ventilating offices, day-care centres or used as zone ventilation in larger buildings e.g. schools. Top-connection of the air-ducts minimise the “Footprint” of the unit. To meet the new restricted energy requirements with low SFP (Specific Fan Power) Topvex is equipped with EC fan motors. EC-motors consume an average of 30% less energy than AC motors. In some applications, the saving can be 50% or more.

*Topvex TR* is equipped with a high efficiency rotating heat exchanger with an efficiency of up to 85%. Rotating heat exchangers do not need condense water drainage and is therefore very flexible to install.

*Topvex TX* with its crossflow heat exchanger is normally used where it is a requirement that the supply and exhaust air must be kept separated. The units have an efficient de-icing function.

**Topvex TR/TX units have energy saving functions like:**

- Week schedule.
- Cool recovering to recover the chilliness in the extract air during warm season. If using an external cooling unit.
- Demand controlled airflow by using a CO<sub>2</sub>/humidity sensor, movement detector etc.
- Sum alarm output for central supervision of many units. Central supervision secures that incorrect operating, like dirty filters, detects early.

## Explanatory sketch TR/TX

### Topvex TR09-15, TR03-06 CAV/VAV

- UC Unit control
  - FPS Frost protection temp. sensor
  - SF Supply fan
  - WHB\* Heating coil, water

**SFP = Specific Fan Power ( $\text{kW}/\text{m}^3/\text{s}$ )**

The SFP value stated applies to the complete unit.

**Thermal efficiency**

With air ratio 1:1 and air humidity at 50%.

**Sound data**

The sound data tables indicate the sound power level  $L_{wA}$ , which should not be confused with the sound pressure level.

# Hot water coil TR03-06 CAV/VAV

## Accessories to TR03-06 CAV/VAV

Delivered separate and to be mounted on site, plug-in.

N.B! Fits to units without heater, not units with electrical heater.

*An extract air temperature of 21°C and a heat exchanger efficiency of 70% has been used for the calculations below. In practice the heat exchanger efficiency or extract air temperature may be higher, which may give a few degrees higher supply air temperatures than in the below tables.*

## Ordering code TR

### TR 03-06 CAV/VAV

- Model: **TR03**, **TR04** and **TR06**.
- Heating coil: **EL** (*electric*), **No heater** (*E.g. Unit name: Topvex TR06-L-CAV.*)  
Water coil **HWL** (low power), **HWH** (high power) are accessory to units without heater and the coil is delivered separately.
- Right or Left model: **R** (*Right*), **L** (*Left*). The sides were the supply air is located when viewed from access side.
- Airflow control: **CAV** (*Constant air volume*), **VAV** (*Variable air volume = constant duct pressure control*)

### TR 09-15

- Model: TR09, TR12, TR15
- Heating coil: electric = EL, water = HW  
*Available power:*  
TR09 EL: 6kW alt. 15kW      TR09 HW: HWL - low power, HWH - high power  
TR12 EL: 9kW alt. 21kW      TR12 HW: HWL - low power, HWH - high power  
TR15 EL: 15kW      TR15 HW: HWL - low power, HWH - high power
- Right or left model (The side were the supply air is located when viewed from access side)
- CAV or VAV airflow controlling  
(CAV= Constant Air Volume, VAV= Variable Air Volume)
- Communication to BMS systems  
Exoline, Modbus  
LON  
Exoline/Built-in Web via TCP/IP

Dotted frame = open by-pass

An extract air temperature of 21°C and a heat exchanger efficiency of 55% has been used for the calculations below. In practice the heat exchanger efficiency or extract air temperature may be higher, which may give a few degrees higher supply air temperatures than in the above tables.

## Ordering code TX

- Model: TX03, TX04, TX06
- Heating coil: electric = EL, water = HW  
*Available power:*  
 TX03 EL: 6kW                      TX03 HW: HWL - low power, HWH - high power  
 TX04 EL: 12kW                    TX04 HW: HWL - low power, HWH - high power  
 TX06 EL: 16kW                    TX06 HW: HWL - low power, HWH - high power
- Right or left model (The side where the supply air is located when viewed from access side)

- S – Side connection**
- F – Flat design**
- R – Rotating heat exchanger**
- X – Cross flow heat exchanger**

Topvex SR, SX and FR is a “Plug and play” air handling unit with a modern design intended for ventilating offices, day-care centres or used as zone ventilation in larger buildings e.g. schools. To meet the new restricted energy requirements with low SFP (Specific Fan Power) Topvex is equipped with EC fan motors. EC-motors consume an average of 30% less energy than AC motors. In some applications, the saving can be 50% or more.

SR 07-11 has a non-removable rotating heat exchanger.

Topvex SR/FR is equipped with a high efficiency rotating heat exchanger with an efficiency of up to 85%. Rotating heat exchangers do not need condense water drainage and is therefore very flexible to install.

Topvex FR with the unique design of double rotating heat exchangers makes the unit very flat. Using the enclosed suspension device, the Topvex FR can be installed in a false ceiling. The units are delivered with doors on hinges as standard. A sliding door kit is available as accessory. The kit includes rails and wheels and is to be mounted on the standard unit.

Topvex SX with its crossflow heat exchanger is normally used where it is a requirement that the supply and exhaust air must be kept separated. The unit have an efficient de-icing function.

**Topvex SR/SX and FR units have energy saving functions like:**

- Week schedule.
- Cool recovering to recover the chilliness in the extract air during warm season. If using an external cooling unit.
- Demand controlled airflow by using a CO<sub>2</sub>/humidity sensor, movement detector etc.
- Sum alarm output for central supervision of many units.  
Central supervision secures that incorrect operating, like dirty filters, detects early.

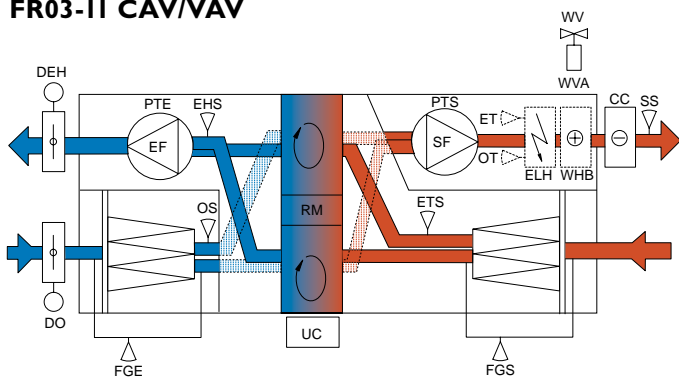

## Explanatory sketch SR/SX/FR

**SFP = Specific Fan Power (kW/m³/s)**

The SFP value stated applies to the complete unit.

**Thermal efficiency**

With air ratio 1:1 and air humidity at 50%.

**Sound data**

The sound data tables indicate the sound power level  $L_{wA}$ , which should not be confused with the sound pressure level.

## Hot water coil SR03-06 CAV/VAV

### Accessories to SR03-06 CAV/VAV

Delivered separate and to be mounted on site, plug-in.

N.B! Fits to units without heater, not units with electrical heater.

## Ordering code SR

### SR03-06 CAV/VAV

- Model: SR03, SR04 and SR06.
- Heating coil: EL (*electric*), No heater (*E.g. Unit name: Topvex SR06-L-CAV.*)  
Water coil HWL (low power), HWH (high power) are accessory to units without heater and the coil is delivered separately.
- Right or Left model: R (*Right*), L (*Left*). The sides where the supply air is located when viewed from access side.
- Airflow control: CAV (*Constant air volume*), VAV (*Variable air volume = constant duct pressure control*)

### SR07-II

- Model: SR07, SR09, SR11
- Heating coil: electric = EL, water = HWL  
*Available power:*  
SR07 E EL: 3kW alt. 12kW      SR07 E HW: HWL - low power, HWH - high power  
SR09 E EL: 4,5kW alt. 15kW      SR09 E HW: HWL - low power, HWH - high power  
SR11 E EL: 6kW alt. 12kW or 24kW      SR11 E HW: HWL - low power, HWH - high power
- Right or left model (access side as viewed looking in the direction of the supply air)
- Extract duct, top or side connection
- CAV or VAV airflow controlling  
(CAV= Constant Air Volume, VAV= Variable Air Volume)
- Communication to BMS systems  
Exoline, Modbus  
LON  
Exoline/Built-in Web via TCP/IP

**SFP = Specific Fan Power ( $\text{kW}/\text{m}^3/\text{s}$ )**

The SFP value stated applies to the complete unit.

**Thermal efficiency**

With air ratio 1:1 and air humidity at 50%.

**Sound data**

The sound data tables indicate the sound power level  $L_{wA}$ , which should not be confused with the sound pressure level.

**Supply**

**SFP = Specific Fan Power (kW/m³/s)**

The SFP value stated applies to the complete unit.

**Thermal efficiency**

With air ratio 1:1 and air humidity at 50%.

**Sound data**

The sound data tables indicate the sound power level L<sub>wA</sub>, which should not be confused with the sound pressure level.

# Hot water coil FR CAV/VAV

## Accessories to FR 03-06 CAV/VAV

Delivered separate and to be mounted on site, plug-in.

N.B! Fits to units without heater, not units with electrical heater.

*An extract air temperature of 21°C and a heat exchanger efficiency of 70% has been used for the calculations below. In practice the heat exchanger efficiency or extract air temperature may be higher, which may give a few degrees higher supply air temperatures than in the below tables.*

HW coil is accessory for the Topvex FR CAV/VAV units. Delivered separate and to be mounted on site, plug-in.

NB! Fits to units without heater!

## Accessories FR CAV/VAV

	Topvex FR03 CAV/VAV	Topvex FR06 CAV/VAV	Topvex FR08 CAV/VAV	Topvex FR11 CAV/VAV
Repeater, 230V main supply *	E0-R230K	E0-R230K	E0-R230K	E0-R230K
Repeater, 24V main supply *	E0-R	E0-R	E0-R	E0-R

\* Used when distance between the unit and control panel is more than 10 meters

\*\* Only for units without heater.

\*\*\* For more information see the catalogue "Ventilation products EIII"

## Ordering code FR

### FR03-II CAV/VAV

- Model: **FR03**, **FR04**, **FR06** and **FR11**.
- Heating coil: **EL** (*electric*), **No heater** (*E.g. Unit name: Topvex FR06-L-CAV 400V*).  
Water coil **HWL** (low power), **HWH** (high power) are accessory to units without heater and the coil is delivered separately.
- Right or Left model: **R** (*Right*), **L** (*Left*). The sides where the supply air is located when viewed from access side, standing on the electrical box side.
- Airflow control: **CAV** (*Constant air volume*), **VAV** (*Variable air volume = constant duct pressure control*)

## Ordering code SX

- Model: SX03, SX04, SX06
- Heating coil: electric = EL, water = HW  
*Available power:*  
 SX03: 6kW  
 SX04: 12kW  
 SX06: 16kW  
 SX03 HW: HWL - low power, HWH - high power  
 SX04 HW: HWL - low power, HWH - high power  
 SX06 HW: HWL - low power, HWH - high power
- Right or left model (The side where the supply air is located when viewed from access side)

## Functions included in the Standard, E17S controller:

<b>Menu Languages</b>	More than 20 different languages.
<b>Temperature control</b>	Constant supply air. Constant supply air with outdoor temp. compensation. Extract air (cascade).
<b>Air flow control</b>	Week timer, two separate running periods/twenty-four hours.
<b>Fan control</b>	Stepless settable between 0-100%. Transformer control.
<b>Heat exchanger control</b>	Rotating heat exchanger (on/off). By-pass damper, cross/counter flow exchanger (stepless).
<b>Re-heater control</b>	Hot water coil (0...10V control signal). Electric heating.
<b>Cold water cooler control</b>	External coil (0...10V control signal).
<b>DX cooling control</b>	External coil (Step controller SC2/D is required, accessory).
<b>Cool recovering</b>	Automatically recovers the cold in the indoor air to cool down the warmer outdoor air.
<b>Night cooling</b>	Night cooling is used during the summer to cool the building night-time by using cool outdoor air, thereby reducing the need for cooling during the day and thereby saving energy.
<b>Demand ventilation</b>	The units have one digital input for extended/forced running using an external signal, e.g. an external timer, movement detector, CO <sub>2</sub> -sensor or similar sensor with a voltage free contact. Extended/forced running is when the unit goes from shut down mode, low or medium fan-speed to the chosen fan speed.
<b>Extended running</b>	The units have a digital input for extended/forced running. The function activates by using an external signal from e.g. a push button or a timer. The function can also be activated by using the control panel. Extended running can be set between 0-240 minutes.
<b>Week schedule</b>	Two separate running periods/week day.
<b>Damper control</b>	24V output to control one or two shut-off dampers.
<b>Alarm</b>	Alarm messages in clear text. Sum alarm output (24V). Fire alarm input (potential free contact). Stop the unit or continuous running.
<b>Communication</b>	When more than 10 meter cable between the unit and control panel is needed a repeater (E0-R accessory) can be used. One E0-R can control up to 6 AHU's. Exoline and Modbus via RS 485.

## Functions included in the Advanced, E28 controller:

<b>Menu Languages</b>	More than 20 different languages.
<b>Temperature control</b>	Supply air. Supply air with outdoor temp. compensation. Extract air. Cascaded room temperature control. Outdoor temperature dependent switching between room control and supply air control. Outdoor temperature dependent switching between exhaust air control and supply air control.
<b>Air flow control</b>	Year-based clock function. This means that a week-schedule with holiday periods for a full year can be set. Each day has up to two individual running periods for normal speed and reduced speed.
<b>Fan control</b>	Constant air volume control, CAV. Constant duct pressure control, VAV. Outdoor temperature compensated air volume/duct pressure.
<b>Heat exchanger control</b>	Rotating heat exchanger (stepless). By-pass damper, cross/counter flow exchanger (stepless). Liquid connected exchanger (0...10V control signal or by two digital outputs). Mixing dampers (0...10V control signal).
<b>Re-heater control</b>	Hot water coil (0...10V control signal). Electric heating.
<b>Cold water cooler control</b>	External coil (0...10V control signal).
<b>DX cooling control</b>	External coil (Up to 3-step, binary control).
<b>Cool recovering</b>	Automatically recovers the cold in the indoor air to cool down the warmer outdoor air.
<b>Free cooling</b>	Free cooling is used to save energy by using the cold outdoor air, e.g. during night time, to cool down the building.
<b>Demand ventilation</b>	In applications with varying occupancy the fan speeds or mixing dampers can be controlled by the air quality as measured by a CO <sub>2</sub> -sensor. It is also possible to use a digital input for extended/forced running using an external signal, e.g. an external timer, movement detector or a similar sensor with a voltage free contact.
<b>Extended running</b>	The units have a digital input for extended/forced running. The function activates by using an external signal from e.g. a push button or a timer. The function can also be activated by using the control panel. Extended running can be set between 0-240 minutes.
<b>Yearly schedule</b>	Year-based clock function. This means that a week-schedule with holiday periods for a full year can be set. Each day has up to two individual running periods for normal speed and reduced speed. Digital timer channels for door locks, lighting etc.
<b>Damper control</b>	24V output to control one or two shut-off dampers.
<b>Alarm</b>	Alarm messages in clear text. Alarm priorities, alarms can be given different priority levels, A-alarm, B-alarm, C-alarm or not active. Sum alarm output (24V). Fire alarm input (potential free contact). Different fan control modes at fire.
<b>Communication</b>	When more than 10 meter cable between the unit and control panel is needed a repeater (E0-R accessory) can be used. One E0-R can control up to 6 AHU's. Standard – Exoline and Modbus via RS 485. Option - Exoline/Built-in Web via TCP/IP. (Standard in TR/SR03-06 CAV/VAV and FR03-11 CAV/VAV). Option – LON.
<b>E-tool software</b>	A PC-based commissioning software.

## Accessories

### Damper for outdoor air

Shutter damper EFD is a shut-off damper suitable for Topvex. The damper is provided with 24V AC motors with spring-return actuators. EFD are made in leakage performance class 3 according to EN 1751:1998 Annex C.2. Outdoor air dampers are used to prevent the hot water battery from freezing and also prevent cold air to chill down the building if the unit stops. EFD is connected to terminals in the electrical connection box.

#### Maintenance

We recommend preventive maintenance of the damper twice per year for optimum performance. If the damper gets dirty, the blade/s should be cleaned. The gasket sealing should be checked and the blade/s axle/s lubricated as necessary.

#### Circular damper

The circular damper consists of a tubular housing equipped with a damper blade pivoting on an axle. The blade fits into the circular duct. The connection ends are equipped with silicon rubber sealing rings. The damper is made

from hot-dip galvanised sheet steel. The shut-off damper is prepared for external insulation and has arrows showing the damper blade position.

200	200
250	250
315	315
400	400
500	500
630	630

#### Rectangular damper

The rectangular multi-leaf damper comprises a number of opposed blades, swivelling on nylon bearings in a sheet metal framework. The blades are connected via a system of linkages (protected) on the outside of the frame. The damper is made of hot-dip galvanised sheet steel. The shut-off damper is prepared for external insulation and has arrows showing the damper blade position.

80-40	800	400
100-35	1000	350

#### Combi grid CVVX

The Combi grid, suitable for mounting on an outside wall is produced from galvanised sheet steel, finished in dark grey enamel. The outside air intake, and exhaust air outlet are separated from each other so that the air cannot "short circuit". Four screws on the front facilitate dismantling for cleaning of the grid. *Mounting:* The back plate is first screwed and fitted to the wall. The grid can be mounted with exhaust-air outlet either on the right or on the left.

### Cooling battery – water

**CWK**, cold water-cooling battery for circular ducts. Casing of galvanised sheet steel with copper tubes and aluminium fins. Inspection covers for easy cleaning and maintenance.

Connection sleeves with rubber seal.  
Max working pressure 1.6 MPa (16 bar).

**RVAZ4 – Valve motor, water valve**

RVAZ4 24A is a valve actuator for control with 0...10V signal. 24 V AC supply voltage. Suitable for controlling ZTV/ZTR valves.

This product conforms with the EMC requirements of European harmonised standards EN60730-1:2000 and EN60730-2-8:2002 and carries the CE mark.

Voltage supply	24 V AC +/- 15%
Power consumption	Max. 6 W
Frequency	50/60 Hz
Max. stroke	5.5 mm
Full stroke time	121 sec
Stem force	400 Nm
Permitted max ambient humidity	95 %RH
Permitted range for ambient temperature	0...50°C
Enclosure class	44 IP

**ZTV/ZTR – Water valve/heating water, 2/3-way**

ZTV/ZTR is a 2 and 3-way control valve to control the hotwater to the heating battery. They are intended for use together with the RVAZ4 24A actuator.

**Technical data**

Flow charac.	Percental increase
Media temp.	1...+110°C
Media	Hot, cold, glycol mixed (max. 30% glycol)
Stroke	5 mm
Leakage	0% in closed position
Pressure class	PN16 (1.6MPa)
Rangeability	50:1
Mat: Body	Brass
Mat: Spindle	Stainless steel
Mat: Seat	Brass
O-ring	EPDM

**RVAZ4 24A**

**Pressure drop**

**DXRE – Duct coolers with DX Coil**

DXRE are used for central cooling of the ventilation air in ventilation systems. The DXRE is also used for individual cooling of the air supplied to individual rooms (zones).

- 8 standard sizes
- Same model for left-hand or right-hand installation (reversible coil).
- Stainless steel condensate drip tray. A droplet eliminator can be fitted regardless of the direction of air flow
- Easily removable drip tray to simplify cleaning and inspection.

**Droplet eliminator DE**

We recommend that a droplet eliminator should be installed on the outlet side of the coil if the air velocity is in excess of 2.5 m/s. This prevents water droplets being entrained by the air flow out into the duct system. The collected water is discharged through the stainless steel condensate drip tray. The droplet eliminator is easily accessible after the drip tray has been removed.

**Operating data**

Max. operating press.: 2.8 MPa (28 Bar)  
The coils are tested for leakage.

**Design**

The casing is made of Aluzinc-coated sheet steel. The coil has copper tubes and aluminium fins. Stainless steel drip tray for collecting the condensate, with R½ drain connection. Removable drip tray for inspection and cleaning of the coil.

**Installation**

The DXRE is intended for installation in a horizontal duct, with the air flow in either direction (reversible coil).

*NB! Droplet eliminator DE must be ordered seperately.*

**Pressure drop across droplet eliminator**

## Capacity, refrigerant R407C, 5 °C

### Standard sizes of DXRE

The tables on the following pages give examples of the capacity for each size. If none of these is suitable, we shall be pleased to carry out a computer calculation.

DXRE	Air flow (m <sup>3</sup> /h)	Air pressure drop (Pa)	Air in (°C)	Air in (% RH)	Air out (°C)	Output (kW)	Refrigerant flow (kg/h)	Refrigerant pressure drop (kPa)
